Market: Quite impressive how much we've managed to rally in the face of the macro backdrop and increasingly idiosyncratic problems at Nvidia. Yesterday was emphatically not a broad based move. Semis did the heavy lifting, with t**he SOX +5.5%, ARM +12%, MU +12%...while MSFT, META and AMZN all finished lower.** The resilience of the broader tech complex is remarkable given how much market cap is concentrated in Nvidia. The governance issues are clearly forcing a significant rebalancing of capital. The standout flow yesterday. **Retail Favorites (GSXURFAV) +495bps, its 3rd best day in three years, (three sub $4 stocks accounting for 32% of US tape volume US Equities Mid-Day Color).** Overnight NVDA dropping roughly 9%, weighing on Asia tech tape.

市场：在宏观背景以及英伟达日益突出的个体问题面前，我们仍能实现如此幅度的反弹，令人印象深刻。昨日显然不是一次普涨行情。半导体板块承担了主要拉升任务，SOX 指数上涨 5.5%，ARM 涨 12%，MU 涨 12%……而 MSFT、META 和 AMZN 均收跌。鉴于英伟达在市值中的集中度如此之高，更广泛科技板块的韧性令人瞩目。治理问题显然正在迫使资本进行显著再平衡。昨日的资金流表现突出。零售偏好（GSXURFAV）+495bps，为三年来第三佳表现（三只股价低于 4 美元的股票占美股成交量的 32%——美股午间快评）。隔夜英伟达下跌约 9%，拖累亚洲科技股盘面。

Vol/Positioning: Vol complex has largely reset. **SPX vol curve un-inverted, dealer skew flattened** and **systematic L/S managers posted their best two day return in nearly three years (+2.15%).** Feels like we've reached a point of relatively lower risk, considerable confusion around AI and persistent concern about the political/geo-political backdrop. Yet the market keeps finding a bid. The question is **whether this is simply the mechanical consequence of lower positioning and short covering, or the beginning of something more durable.** Breadth remains narrow, but the fact we can absorb this much Nvidia specific pressure without a broader capitulation is noteworthy.

波动率/仓位：波动率结构已基本重置。SPX 波动率曲线不再倒挂，交易商偏度趋平，系统性多空策略管理人录得近三年来最佳两日回报（+2.15%）。感觉我们已进入一个风险相对较低、对 AI 存在相当困惑、且对政治/地缘政治背景持续担忧的阶段。然而市场总能找到买盘。问题在于，这仅仅是仓位降低和空头回补的机械性结果，还是某种更持久趋势的开端。广度依然狭窄，但值得注意的是，我们能在没有更广泛投降的情况下消化如此大的英伟达特定压力。

Iran: Geopolitical concerns continue to linger. Conflicting headlines everywhere… reports of an extremely contentious phone call between Netanyahu and Trump over renewed strikes, disputed by Netanyahu's office, alongside suggestions Vance is exploring direct talks with Iranian officials, which Tehran has so far resisted. Iranian officials suggest Washington has indicated roughly a 2w window before deciding on further military action. Meanwhile, the third US carrier group is heading toward the region, potentially arriving around mid month, although it may ultimately relieve an existing deployment. **Diplomacy and military preparation are proceeding simultaneously. Hard to have conviction about which direction this goes.**

伊朗：地缘政治担忧持续挥之不去。各方报道相互矛盾……有报道称内塔尼亚胡与特朗普就新一轮打击进行了极具争议的通话，但内塔尼亚胡办公室予以否认；同时有消息称万斯正寻求与伊朗官员直接对话，而德黑兰方面迄今予以抵制。伊朗官员暗示，华盛顿已给出大约两周的窗口期，然后再决定是否采取进一步军事行动。与此同时，美国第三个航母战斗群正驶向该地区，可能于本月中旬抵达，尽管最终可能只是轮换现有部署。外交与军事准备正同步推进。很难对局势走向抱有确信。

Russia/Ukraine: Polymarket pricing for a ceasefire by December has fallen toward 10%, with March only around 25% on the comparable contract. Talks in Abu Dhabi produced agreement in principle on a large prisoner exchange but little progress on the fundamental territorial and security questions. Plenty of rhetoric, but cementing a lasting resolution looks elusive. **The market can reasonably hope for progress at some point in 2027, but increasingly difficult to argue for anything imminent over the next two months.**

俄罗斯/乌克兰：Polymarket 对 12 月前实现停火的定价已跌至约 10%，而可比合约对 3 月的定价仅在 25% 左右。阿布扎比会谈原则上就大规模换俘达成一致，但在根本的领土与安全问题上进展甚微。言辞不少，但巩固持久解决方案仍显得难以捉摸。市场有理由期待 2027 年某个时候取得进展，但越来越难论证未来两个月内会有任何迫在眉睫的突破。

AI Hardware & Infrastructure: We continue to separate fundamental compute demand from upstream/downstream valuation multiples. **Hyperscalers** remain best positioned to navigate tight supply given balance sheet capacity and contracted infrastructure. Downstream, the market continues to question multiples. The **four tactical overhangs** remain: (1) higher cost of **capital**, (2) power/**permitting** delivery constraints, (3) supply/demand **balance entering 2028,** and (4) ultimate **monetization** velocity relative to capex. While near term permitting and logistical concerns have eased, the real worries are over the LT supply absorption and ROI realization. Expect the AI infrastructure trade to generate episodic, high beta trading rallies rather than pure buy + hold,...strong micro results coexisting with multiple compression.

AI 硬件与基础设施：我们继续将基础算力需求与上游/下游估值倍数区分开来。超大规模云服务商凭借资产负债表实力和已签约的基础设施，在应对供应紧张方面仍处于最佳位置。在下游，市场对估值倍数仍存疑虑。四个战术性压制因素依然存在：(1) 资本成本上升，(2) 电力/许可交付限制，(3) 进入 2028 年后的供需平衡，以及 (4) 相对于资本支出的最终变现速度。尽管近期的许可和物流担忧有所缓解，但真正的担忧在于长期供应消化和 ROI 实现。预计 AI 基础设施交易将产生间歇性的高贝塔交易行情，而非纯粹的买入并持有，……强劲的微盘结果与多重压缩并存。

Risk: Time will tell whether this was anything more than a bear market rally. There are plenty of reasons to be constructive, **but a durable breakout probably requires lower rates, lower energy and broader leadership.** The logical candidates outside the immediate AI infrastructure complex are **hyperscalers, transportation, cyclicals and aerospace**. Defense also looks washed out. But it's difficult for many of these groups to work sustainably against an **aggressive hiking cycle and stubbornly high oil prices**. Ultimately, the **market needs oil fixed and rates lower... and those two things may well be connected.** Absent that, I suspect we chop rather than break out. That said, positioning has been reset materially, volatility remains elevated and the market has already absorbed an extraordinary amount of bad news. Low positioning and high vol are powerful short term tailwinds.

风险：时间将证明这是否不仅仅是一次熊市反弹。有充分的理由保持建设性看法，但持久的突破可能需要更低的利率、更低的能源价格以及更广泛的领涨板块。除了直接的 AI 基础设施板块之外，合乎逻辑的候选者包括超大规模企业、交通运输、周期性行业和航空航天。国防板块看起来也已被过度抛售。但在激进的加息周期和居高不下的油价下，许多这些板块很难持续表现。归根结底，市场需要解决油价问题并降低利率……而这两者很可能相互关联。若非如此，我怀疑我们将陷入震荡而非突破。 话虽如此，仓位已发生实质性重置，波动率居高不下，且市场已消化了相当数量的坏消息。低仓位和高波动率是强劲的短期顺风。
