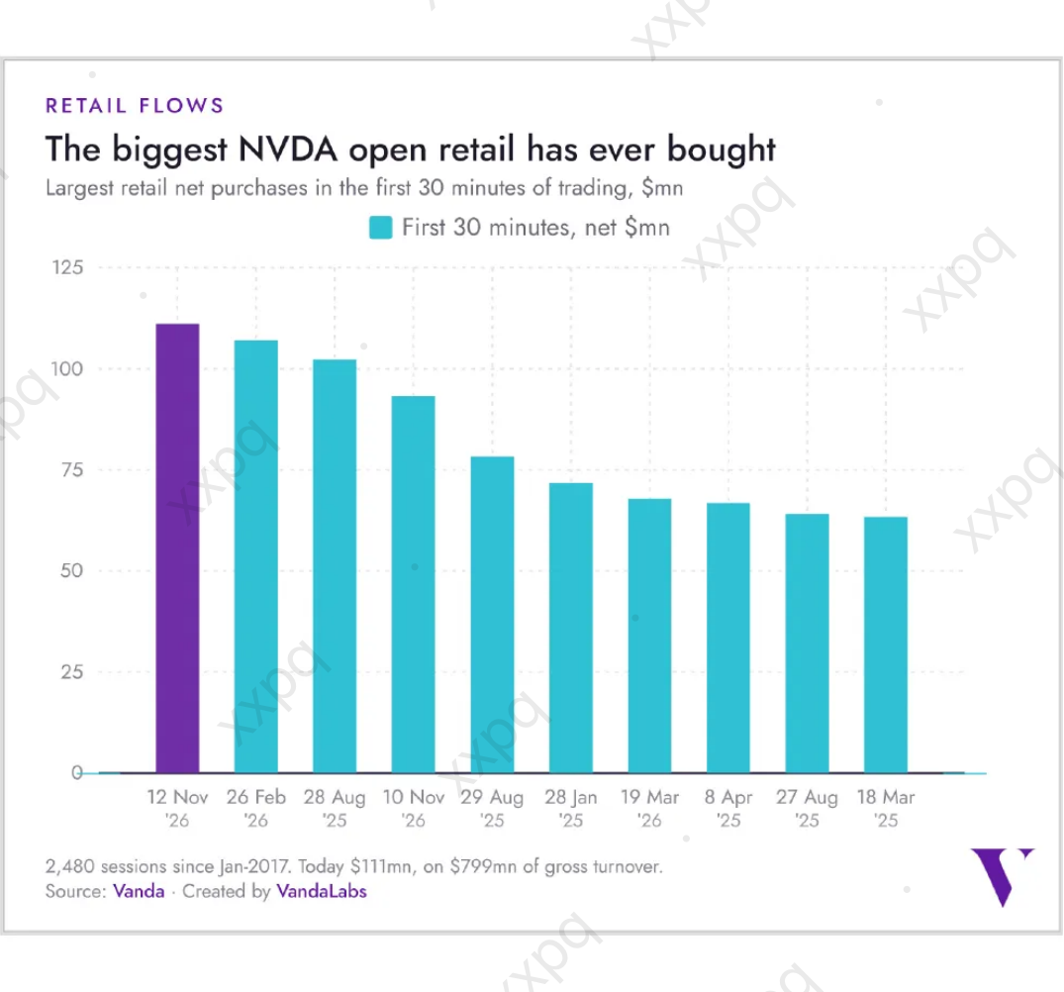
TMTB EOD Wrap TMTB 收盘总结

TMT BREAKOUT
46 MINUTES AGO · PAID

Good afternoon. Unexpected news to come back to after my mini-break as news of Jensen's resignation dominated the day (CFO Colette Kress interim CEO). **QQQs -30bps** held in ok after a -1.5% open and a stretch in the green late morning, with **NVDA -4.3%** closing well off its -14.3% lows. Vanda said it was the biggest NVDA open retail has ever bought:

下午好。短暂休息回来就迎来了意外消息，因为 Jensen 辞职的消息主导了当天（CFO Colette Kress 临时出任 CEO）。QQQs 下跌 30 个基点，在低开 1.5% 后表现尚可，上午晚些时候一度翻红，NVDA 下跌 4.3%，收盘远好于 -14.3% 的低点。Vanda 表示，这是散户在 NVDA 开盘时买入规模最大的一次：



Overall, we heard fast-money covering the stock this morning, but didn't hear many excited about buying with most thinking it's likely to chop around into and after the quarter next week.

总体而言，我们听到快钱资金今早回补了该股，但没听到有多少人兴奋地买入，大多数人认为该股在下周季度节点前后可能都会来回震荡。

Semis -25bps also climbed out of its 3.5% early morning hole as the perceived winners from the whole Jensen saga ripped: **AMD +6%; AVGO +5.5%; ANET +5%; CLS +5%** (TPU exposure); **GOOGL +1.8%** the big winner outside of semis.

半导体 -25bps 也爬出了早盘 3.5% 的坑，因为被视为整个 Jensen 事件赢家的个股大涨：AMD +6%；AVGO +5.5%；ANET +5%；CLS +5%（TPU 概念）；GOOGL +1.8% 是半导体之外的大赢家。

Outside of that, neoclouds pulled back a day after rallying post-CRWV as NBIS's guide cut took the space down **(NBIS -17%; CRWV -7%)**, as well as some glass half empty reads for the space after the departure of the AI financing kingmaker. China names hit on the remote control rule and potential Megaspeed/Singapore crackdown .... **(BABA -7%** a Megaspeed Customer**; VNET -11%; GDS -11%).**

除此之外，新云股在 CRWV 发布后上涨的次日回落，因 NBIS 下调业绩指引拖累了该板块（NBIS -17%；CRWV -7%），同时 AI 融资教父的离职也让市场对该板块产生了一些悲观解读。中概股因遥控规则以及 Megaspeed/新加坡潜在的打击而承压……（BABA -7%，为 Megaspeed 客户；VNET -11%；GDS -11%）。

More deets on the read-throughs:

关于业绩预期的更多细节：

- On **AMD**, bulls say you get Helios share gains, extra TSM Capacity and talent shift from NVDA but bears will push back saying OAI and neoclouds demand runs through same NVDA financing channels. Arcuri at UBS said even if customers wanted to swap NVDA GPUs for AMD's, they can't anytime soon, because the supply chain is maxed out (no spare substrate, no incremental AMD capacity); any share shift is a longer-term story and doesn't justify AMD popping 5% today. Rosenblatt put any benefit at least six months out. William Blair upgraded the stock today.

  关于 AMD，多头认为你会看到 Helios 的份额增长、额外的台积电产能以及来自英伟达的人才转移，但空头会反驳说，OpenAI 和新型云厂商的需求仍需通过英伟达的融资渠道。瑞银的 Arcuri 表示，即使客户想用 AMD GPU 替换英伟达 GPU，短期内也无法实现，因为供应链已满负荷（没有备用基板，没有额外的 AMD 产能）；任何份额转移都是长期的故事，无法解释 AMD 今日上涨 5% 的原因。Rosenblatt 认为任何收益至少要等六个月。William Blair 今日上调了该股评级。

- On **AVGO,** similar thoughts as above as it could gain custom chip share, particularly through TPUs and take spare TSM capacity. Some called out **CLS** (TPU exposure) as a beneficiary as well.

  关于 AVGO，思路与上述类似，因为它可能获得定制芯片份额，特别是通过 TPU 并利用台积电的闲置产能。也有人指出 CLS（TPU 敞口）也将受益。

- On **GOOGL,** *Arun* called it "the clearest winner" as TPUs are the main alternative to NVDA and over time TSMC's CoWoS and N3/N2 capacity should drift toward GOOGL and AVGO. Google is also the only company that both wants to and could fill the gap if neoclouds lose NVDA's backing.

  关于 GOOGL，Arun 称其为"最明显的赢家"，因为 TPU 是 NVDA 的主要替代方案，随着时间的推移，TSMC 的 CoWoS 和 N3/N2 产能应该会向 GOOGL 和 AVGO 倾斜。如果新型云厂商失去 NVDA 的支持，Google 也是唯一一家既有意愿又有能力填补这一空缺的公司。

- On **ANET,** their outlook today covers only scale-out networking. NVDA owns scale-up through NVLink and Spectrum-X. If custom chips take share, a scale-up market opens that isn't in buy-side numbers for 2027 or 2028. That's the bull read at least...

  关于 ANET，他们今天的展望仅涵盖横向扩展网络。NVDA 通过 NVLink 和 Spectrum-X 掌控着纵向扩展。如果定制芯片抢占市场份额，就会打开一个纵向扩展市场，而这并未计入买方对 2027 年或 2028 年的预期中。至少这是看多方的解读……

- **ANT/OAI** seen as winners as NVDA biggest proponent of U.S. open-source push and regulations likely slow any encroachment of China OSS.

  ANT/OAI 被视为赢家，因为 NVDA 是美国推动开源的最大支持者，且监管措施可能会减缓中国开源软件的任何侵蚀。

- **Meme bulls** the other big winner

  Meme 多头是另一个大赢家

- **Neoclouds** the consensus losers from the news as bears will say they raised money only because Jensen backed them, although push back is that their vendor financing comes from other places like DELL. A potential successor who does more buybacks instead of pre-buys means less neocloud demand. **ORCL -1%** as their new debt leaned on vendor financing from NVDA. SemiAnalysis calls a non-Jensen led NVDA "really bad for Nvidia supply chain." For example: **MRVL -2.6%, LITE -3.4%** as a more conservative NVDA likely slows pace of innovation; recall, NVDA pulled next-gen tech (1.6T/3.2T, CPO) in faster than anyone and pre-bought capacity to do it (LITE's '27 reportedly locked up by NVDA).

  新云在新闻中成为共识的输家，因为空头会说它们之所以能融资，只是因为 Jensen 背书，尽管反驳意见是它们的供应商融资来自 DELL 等其他来源。一位潜在继任者如果更多进行回购而非预购，意味着新云需求减少。ORCL -1%，因其新债务依赖来自 NVDA 的供应商融资。SemiAnalysis 称，由非 Jensen 领导的 NVDA"对英伟达供应链真的很糟糕"。例如：MRVL -2.6%，LITE -3.4%，因为更保守的 NVDA 可能会放缓创新步伐；回顾一下，NVDA 比任何人都更快地拉动了下一代技术（1.6T/3.2T、CPO），并为此预购了产能（据报道 LITE 的'27 已被 NVDA 锁定）。

- **AI ecosystem** the other perceived loser with the argument being as follows: NVDA throws off ~$50-60B/Q of FCF and puts a big portion back into neoclouds, labs and suppliers, so even a pause could take ~$50B or more out of the system just as rates are rising and parts of credit getting less liquid.

  AI 生态圈是另一个被认为的输家，其论点如下：NVDA 产生~$500-600 亿/季的自由现金流，并将很大一部分重新投入新云、实验室和供应商，因此，即使只是暂停，也可能在利率上升且部分信贷流动性下降之际，从系统中抽走~$500 亿或更多。

And of course, **NVDA** the biggest loser in all this as you lose a talent like Jensen which had 60 direct reports which means company likely moves a lot slower and more risk-averse than before. Big change for a company that had been pushing the edge of AI technology across the supply chain. You also potentially lose China/SE Asia revenue (UBS has it at 10%, but others like Culper think higher), potential price cuts mean lower margins, and NVDA could lose out on supply chain relationships that allowed sourcing of cheaper components, particularly memory. Semianalysis had a pretty bearish article on the departure this afternoon. Stock got 6 or 7 downgrades today (or more? we stopped counting after 5).

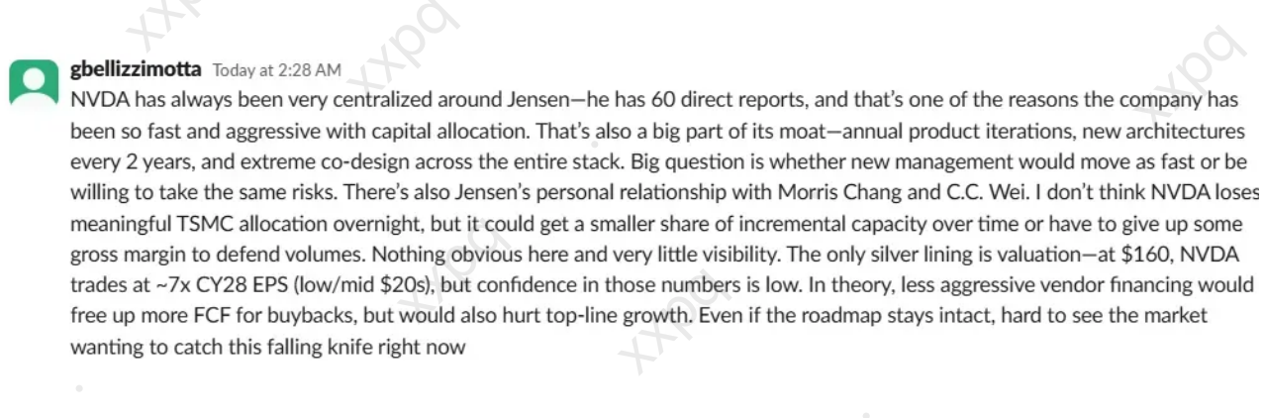
当然，NVDA 是这一切中最大的输家，因为你失去了像 Jensen 这样的人才，他有 60 名直接汇报的下属，这意味着公司的运转可能会比以前慢得多，也更加规避风险。对于一家一直在整个供应链中推动 AI 技术前沿的公司来说，这是一个巨大的转变。你还可能失去中国/东南亚的收入（瑞银估计为 10%，但像 Culper 这样的机构认为更高），潜在的降价意味着更低的利润率，而且 NVDA 可能会失去那些曾允许其采购更廉价零部件（尤其是内存）的供应链关系。Semianalysis 今天下午针对此次离职发表了一篇相当看跌的文章。该股今天遭遇了 6 或 7 次降级（或者更多？我们在数到 5 后就停止计数了）。

What to do with the stock?

这只股票该怎么办？

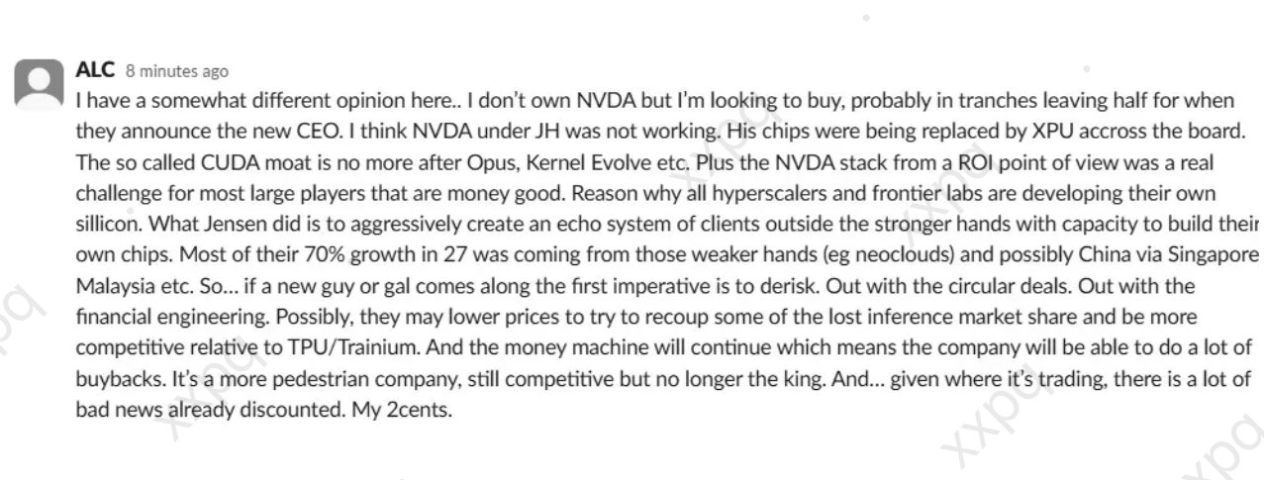
We liked this bear vs. bull take on the stock from TMTB Slack, which we posted this morning, with *gbellizzimotta* arguing Jensen's speed was the moat and ~7x CY28 isn't enough to catch the falling knife, and *ALC* saying a derisked, buyback-heavy NVDA after Jensen already has the bad news priced in:

我们喜欢 TMTB Slack 上关于这只股票的这种多空观点，这是我们今天上午发布的，其中 gbellizzimotta 认为 Jensen 的速度就是护城河，而 ~7x CY28 不足以接住这把下落的飞刀，ALC 则表示，在 Jensen 已经将坏消息计入价格之后，NVDA 已经风险降低且回购力度大：



gbellizzimotta Today at 2:28 AM

NVDA has always been very centralized around Jensen—he has 60 direct reports, and that's one of the reasons the company has been so fast and aggressive with capital allocation. That's also a big part of its moat—annual product iterations, new architectures every 2 years, and extreme co-design across the entire stack. Big question is whether new management would move as fast or be willing to take the same risks. There's also Jensen's personal relationship with Morris Chang and C.C. Wei. I don't think NVDA loses meaningful TSMC allocation overnight, but it could get a smaller share of incremental capacity over time or have to give up some gross margin to defend volumes. Nothing obvious here and very little visibility. The only silver lining is valuation—at $160, NVDA trades at ~7x CY28 EPS (low/mid $20s), but confidence in those numbers is low. In theory, less aggressive vendor financing would free up more FCF for buybacks, but would also hurt top-line growth. Even if the roadmap stays intact, hard to see the market wanting to catch this falling knife right now



ALC 8 minutes ago

I have a somewhat different opinion here.. I don't own NVDA but I'm looking to buy, probably in tranches leaving half for when they announce the new CEO. I think NVDA under JH was not working. His chips were being replaced by XPU accross the board. The so called CUDA moat is no more after Opus, Kernel Evolve etc. Plus the NVDA stack from a ROI point of view was a real challenge for most large players that are money good. Reason why all hyperscalers and frontier labs are developing their own sillicon. What Jensen did is to aggressively create an echo system of clients outside the stronger hands with capacity to build their own chips. Most of their 70% growth in 27 was coming from those weaker hands (eg neoclouds) and possibly China via Singapore Malaysia etc. So... if a new guy or gal comes along the first imperative is to derisk. Out with the circular deals. Out with the financial engineering. Possibly, they may lower prices to try to recoup some of the lost inference market share and be more competitive relative to TPU/Trainium. And the money machine will continue which means the company will be able to do a lot of buybacks. It's a more pedestrian company, still competitive but no longer the king. And... given where it's trading, there is a lot of bad news already discounted. My 2cents.

You thought the day would slow down after Jensen's resignation? Well the headlines didn't stop all day: *Semafor* reported a DOJ antitrust probe of NVDA (with no sign of criminal charges for NVDA or Jensen at this stage), *Reuters* reported a relationship with a second employee and, separately, that the White House is weighing pushing out Commerce Secretary Lutnick. *The Information* also reported Kress, as CFO, had pushed back on a proposed $250B credit backstop for OpenAI's 8GW buildout; (NVDA guaranteed~$100B so far). On succession, Kalshi and Polymarket have Ian Buck at ~35-40% (he's SemiAnalysis' bet too), Semafor has AAPL's Johny Srouji on the list, and Trump posted that Tim Cook should take it.

你以为 Jensen 辞职后，这一天会稍微消停些？然而一整天大新闻都没停过：Semafor 报道称美国司法部对 NVDA 发起反垄断调查（目前尚无 NVDA 或 Jensen 面临刑事指控的迹象），路透社报道了他与第二名员工的关系，并另文报道称白宫正考虑让商务部长 Lutnick 下台。The Information 也报道称，CFO Kress 曾反对为 OpenAI 的 8GW 扩建提供 2500 亿美元信用担保的提议；（NVDA 目前已担保约 1000 亿美元）。关于继任者，Kalshi 和 Polymarket 上 Ian Buck 在~35-40%（他也是 SemiAnalysis 押注的人选），Semafor 的名单上有 AAPL 的 Johny Srouji，而 Trump 发帖称 Tim Cook 应该接任。更多一手研报请加微信：FCCNN88

After the close, AI researcher Will Depue posted what he calls conclusive evidence that DeepSeek, Moonshot, MiniMax and Ant Group trained their newest models on export-barred Blackwells, using GPU "fingerprints" left in their published weights.

收盘后，AI 研究员 Will Depue 发布了他所谓的确凿证据，证明 DeepSeek、Moonshot、MiniMax 和蚂蚁集团在训练其最新模型时使用了受出口管制的 Blackwell 芯片，依据是其发布权重中留下的 GPU "指纹"。

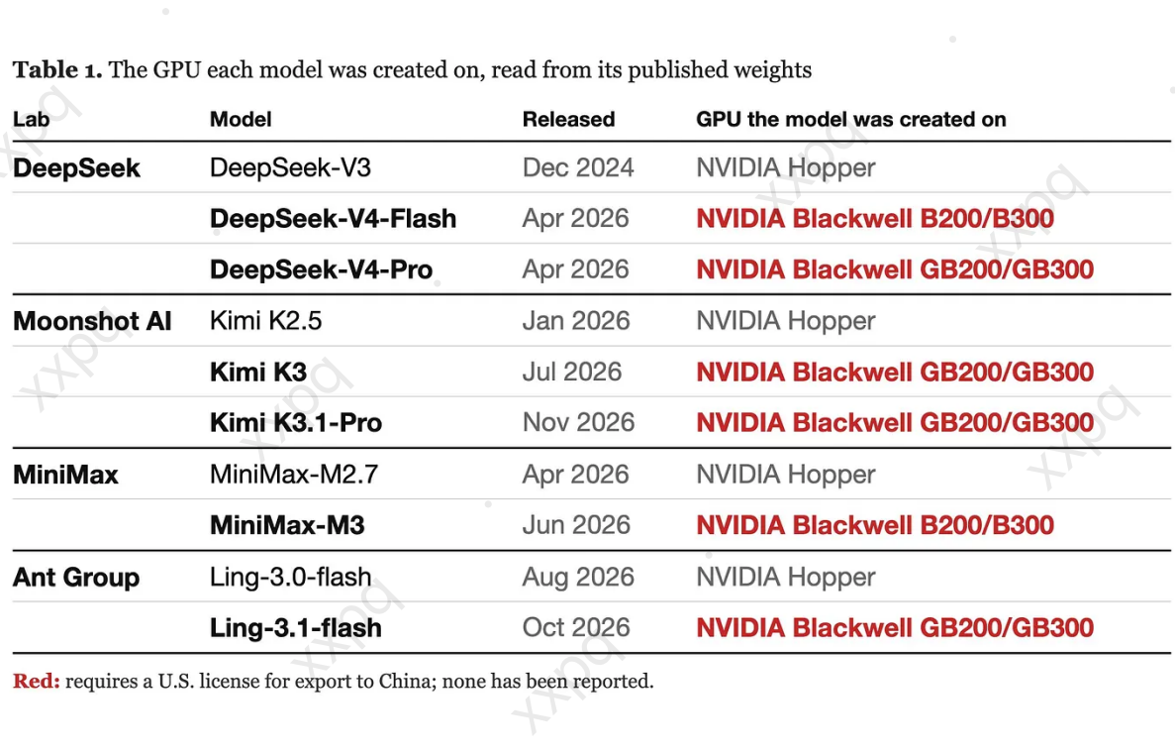

Table 1. The GPU each model was created on, read from its published weights

Lab	Model	Released	GPU the model was created on
DeepSeek	DeepSeek-V3	Dec 2024	NVIDIA Hopper
	DeepSeek-V4-Flash	Apr 2026	**NVIDIA Blackwell B200/B300**
	DeepSeek-V4-Pro	Apr 2026	**NVIDIA Blackwell GB200/GB300**
Moonshot AI	Kimi K2.5	Jan 2026	NVIDIA Hopper
	Kimi K3	Jul 2026	**NVIDIA Blackwell GB200/GB300**
	Kimi K3.1-Pro	Nov 2026	**NVIDIA Blackwell GB200/GB300**
MiniMax	MiniMax-M2.7	Apr 2026	NVIDIA Hopper
	MiniMax-M3	Jun 2026	**NVIDIA Blackwell B200/B300**
Ant Group	Ling-3.0-flash	Aug 2026	NVIDIA Hopper
	Ling-3.1-flash	Oct 2026	**NVIDIA Blackwell GB200/GB300**

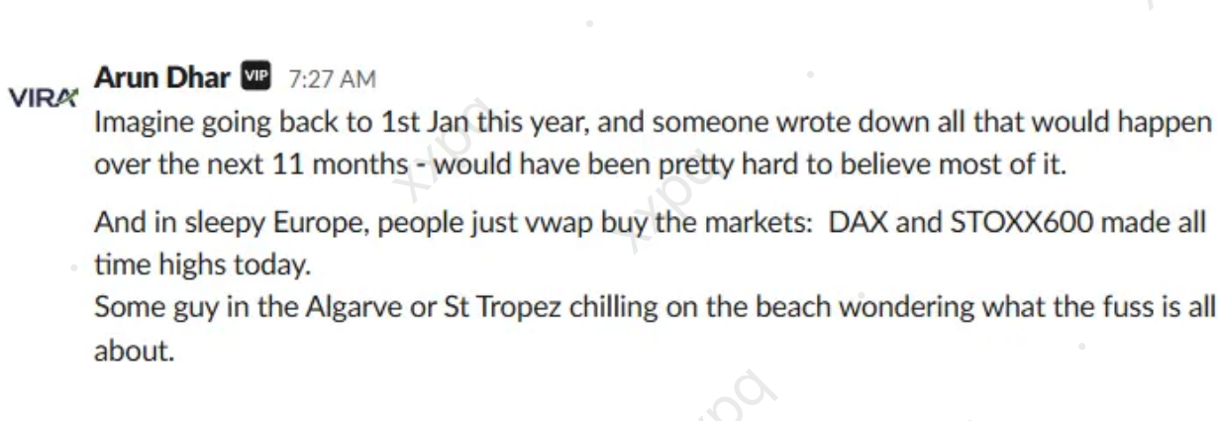
Red: requires a U.S. license for export to China; none has been reported.

Still a klot more to come I imagine...

我想还有更多内容要来……

Best line in Slack today:

今天 Slack 上最棒的一句：



Arun Dhar 7:27 AM

Imagine going back to 1st Jan this year, and someone wrote down all that would happen over the next 11 months - would have been pretty hard to believe most of it.

And in sleepy Europe, people just vwap buy the markets: DAX and STOXX600 made all time highs today.

Some guy in the Algarve or St Tropez chilling on the beach wondering what the fuss is all about.

We sent out First takes on **AMAT/CSCO** here and **CBRS** here.

我们在此处发送了关于 AMAT/CSCO 的初步观点，在此处发送了关于 CBRS 的初步观点。

Not to be forgotten: ANT IPO still plowing ahead, supposedly 6x oversusbcribed with valuation centering on $1.6T

别忘了：蚂蚁集团 IPO 仍在推进，据称认购倍数达 6 倍，估值集中在 1.6 万亿美元

Ok, enough Jensen. A few quick things to call out before we call it a day...

好了，黄仁勋的内容就到这里。在收工之前，还有几件小事需要提一下……
