Regional Updates: 区域更新：

Taiwan: TAIEX +4.94% staged a sharp rebound, gaining more than 2,000 points and briefly trading above 42,000 as large-cap tech leads the recovery. TSMC (2330) rises 4.7%, while MediaTek (2454) and Delta Electronics (2308) both hit limit up with 10% gains. Breadth is exceptionally strong, with more than 200 stocks reaching limit up, suggesting the move is driven more by a technical positioning rebound than a fundamental shift. The recovery extends beyond tech, with non-tech sectors also participating and petrochemicals leading with a 9% gain. Despite the strong index move, market turnover is quieter, falling 39%.

台湾：TAIEX +4.94% 出现急剧反弹，上涨超过 2,000 点，并短暂突破 42,000 点，由大盘科技股领涨复苏。台积电 (2330) 上涨 4.7%，而联发科 (2454) 和台达电 (2308) 均触及涨停，涨幅达 10%。市场广度异常强劲，超过 200 只股票触及涨停，表明此次上涨更多是由技术性仓位反弹驱动，而非基本面转变。复苏蔓延至科技板块之外，非科技板块亦参与其中，石化板块以 9%的涨幅领涨。尽管指数走势强劲，市场交投却较为清淡，成交额下降 39%。

Korea: KOSPI -0.33% stages an intraday rebound from earlier weakness led by semiconductors, though the broader index meets resistance around the 5,150 level and remains lower on the day. KOSDAQ slightly outperforms as small-cap tech and biotech catch bids. Local institutions are the sole net buyers at +$553m, absorbing the rebound, while foreigners sell -$461m, retail -$292m and pensions -$30m. Semiconductors are the dominant theme as dip buyers return following KOSPI’s worst week in 18 months, supporting SK Hynix (000660) and Samsung Electronics (005930). Earnings misses weigh on LIG Nex1 (079550), Cosmecca Korea (241710) and Kolmar Korea (161890). Kakao (035720) finds support from its buyback and cancellation plan after the 3Q miss, although delayed AI monetisation remains an overhang as analysts cut price targets.

韩国：KOSPI -0.33%——在半导体板块引领下，盘中自早前的弱势反弹，不过大盘指数在 5,150 点附近遭遇阻力，日内仍维持跌势。KOSDAQ 表现略优，因小型科技股和生物科技股获买盘承接。本地机构是唯一的净买家，净买入+5.53 亿美元，承接了反弹资金，而外资净卖出-4.61 亿美元，散户-2.92 亿美元，养老金-0.30 亿美元。半导体是主导主题，在 KOSPI 经历 18 个月来最糟糕的一周后，逢低买盘回归，支撑了 SK 海力士(000660)和三星电子(005930)。业绩不及预期拖累了 LIG Nex1(079550)、Cosmecca Korea(241710)和 Kolmar Korea(161890)。尽管分析师下调目标价，且延迟的 AI 变现仍构成压力，但在第三季度业绩不及预期后，Kakao (035720) 的回购并注销计划为其提供了支撑。

Japan: NKY +2.49%. Japanese equities rebound constructively, with NKY and TPX gaining at similar magnitudes as AI-related names pare losses and the NT ratio returns to flat. Cyclicals and growth outperform defensives and value. NKY RSI is back above oversold territory, though the index remains near YTD lows and below key MAs. Gains are broad based, with Advantest (6857), TEL (8035) and Fast Retailing (9983) accounting for ~41% of NKY’s advance. Only eight NKY 225 names trade lower, including Mitsui Chem (4183) on the JSR acquisition headline, real estate names on earnings misses and SoftBank (9984) ahead of tomorrow’s earnings. Kioxia (285A) underperforms, with margin calls likely to provide supply over the next few days. All TPX sectors except food are higher, with banks among the leaders as December BOJ hike pricing recovers to 70%. Turnover is +10% versus the 20 DMA.

日本：NKY +2.49%。日本股市建设性反弹，NKY 和 TPX 涨幅相近，AI 相关个股收窄跌幅，NT 比率回归持平。周期股和成长股跑赢防御股和价值股。NKY RSI 回升至超卖区域上方，尽管指数仍接近年内低点且位于关键均线下方。涨幅广泛，Advantest (6857)、TEL (8035) 和 Fast Retailing (9983) 贡献了 NKY 涨幅的 ~41%。仅 8 只 NKY 225 成分股下跌，包括受 JSR 收购消息影响的 Mitsui Chem (4183)、业绩不及预期的房地产股，以及将于明日公布业绩的 SoftBank (9984)。Kioxia (285A) 表现落后，未来几天追加保证金通知可能带来供应压力。 除食品外，所有 TPX 板块均上涨，银行股领涨，因 12 月日本央行加息定价回升至 70%。成交量较 20 日均值增加 10%。

China: SHSZ300 +0.25%. China moves higher but remains directionless, lagging stronger regional peers as semis trade mixed. Small caps outperform, led by robotics and aerospace, with Apple’s open-sourced HALO autonomous control framework on Unitree’s G1 providing the key catalyst, although momentum fades into the morning close. Unitree (688836) gains 8.65%. CATL (300750) falls another 2.28% after Friday’s 3.7% decline, weighing on ChiNext amid unsubstantiated chatter around December and 1Q27 production cuts, while the impact from SZSE’s new index methodology appears limited. Opticals rebound technically after Friday’s heavy selling, with Innolight (300308) +3.27%. Domestic AI trades mixed as Cambricon (688256) jumps 5.9% on the Nvidia headline, while semi equipment names remain slightly underwater despite the YMTC domestic equipment usage headline. Turnover fades from Thursday’s spike and is tracking roughly unchanged versus last Friday.

中国：沪深 300 指数上涨 0.25%。中国股市走高但方向不明，表现弱于走势强劲的地区同行，半导体板块涨跌互现。小盘股表现优于大盘，机器人和航空航天板块领涨，优必选 G1 采用苹果开源的 HALO 自主控制框架成为主要催化剂，但临近早盘收盘时动能有所减弱。优必选（688836）上涨 8.65%。宁德时代（300750）继上周五下跌 3.7%后，今日再跌 2.28%，拖累创业板指，尽管市场流传关于 12 月及 2027 年第一季度减产的未经证实的传闻，但深交所新指数编制方法的影响似乎有限。 光模块在周五的抛售后技术上反弹，其中新易盛（300308）+3.27%。国内 AI 走势分化，寒武纪（688256）受英伟达消息影响大涨 5.9%，而半导体设备股则依然微跌，尽管有长江存储国产设备应用的消息。成交额较周四的激增有所回落，与上周五相比大致持平。

Hong Kong: HSI +0.12% trades marginally higher after giving back earlier gains as the broader Asian tech rebound fades. Commerce & Industry and financials lead, while tech and properties lag. Alibaba advances on expectations for an imminent next-generation AI model launch, while coal miners rally following China’s cold-wave warning. HKEX is in focus after 3Q results missed expectations on softer trading activity, although the reaction is expected to remain muted given weaker volumes have largely been priced in. Chinese brokers also gain attention after JPMorgan turns more constructive on the sector amid policy support. The broader backdrop remains supported by southbound buying, China’s latest capital-market stabilization pledges and Hong Kong’s stronger-than-expected 3Q GDP print, although the sustainability of the recent post-US-midterm rotation remains the key question.

香港：恒生指数 +0.12%，在更广泛的亚洲科技股反弹消退后回吐早前涨幅，微幅走高。工商业及金融股领涨，而科技股和地产股落后。阿里巴巴因预期即将发布下一代 AI 模型而上涨，煤炭股则在中国发布寒潮预警后走高。港交所在第三季度业绩因交易活动疲软而未达预期后备受关注，不过预计市场反应将保持平淡，因为交易量疲软已在很大程度上被计入价格。中资券商也引人关注，此前摩根大通在政策支持下对该板块转为看涨。 更广泛的市场背景仍受到南下资金买入、中国最新的资本市场维稳承诺以及香港强于预期的第三季度 GDP 数据的支撑，尽管美国中期选举后的近期轮动能否持续仍是关键问题。

ASEAN: JCI +0.82%, sitting near 5,100 as supportive oil and positive regional sentiment underpin the market. Banks lead demand, with BBCA +2.5% and BBRI/BMRI firm, while TLKM +5% and INET +12% drive telcos. Commodities also outperform, led by ANTM, ARCI and HRIA, while BRPT and ICBP lag. **SET +0.72%,** with electronics leading as DELTA benefits from AI and data-center demand expectations. Telecom and energy names ADVANC, PTTEP and CPAXT also support, while petrochem/refinery names IVL, IRPC and BCP rebound on recovering margins and spreads. PTTEP benefits from expansion plans and stable profitability, while CPAXT gains as investors look through one-off charges toward an expected earnings recovery. Singapore market is closed today

东盟：JCI +0.82%，徘徊在 5,100 附近，因油价支撑和区域情绪正面支撑市场。银行股领涨需求，BBCA +2.5%，BBRI/BMRI 走稳，而 TLKM +5% 和 INET +12% 推动电信板块。大宗商品亦跑赢大盘，由 ANTM、ARCI 和 HRIA 领涨，而 BRPT 和 ICBP 落后。SET +0.72%，电子板块领涨，DELTA 受益于 AI 和数据中心需求预期。电信和能源股 ADVANC、PTTEP 和 CPAXT 亦提供支撑，而石化/炼化股 IVL、IRPC 和 BCP 因利润率和价差回升而反弹。PTTEP 受益于扩张计划及稳定的盈利能力，CPAXT 则因投资者透过一次性费用看到预期盈利复苏而上涨。新加坡市场今日休市

India: NIFTY -0.46%. Indian equities consolidate lower after last week’s ~6% rally, their strongest weekly performance since 2021, as investors digest the crude-driven rebound. Pharma leads after Divi’s Labs posts a significant 2Q earnings beat, while banks and real estate also outperform. IT and metals lag, with Tata Steel lower following broadly in-line results and a mixed outlook. The broader setup remains constructive as lower crude eases inflation risks, the 10-year yield falls to 7.18% and early-November foreign inflows turn decisively positive. Broker sentiment also improves, with Citi raising its Nifty target to 28,000 and HSBC upgrading India to Overweight, supported by resilient earnings and more reasonable valuations. The key near-term question is whether the pullback represents healthy consolidation or profit-taking after the sharp recent move, although sustained foreign buying should favour large-cap benchmark heavyweights.

印度：NIFTY -0.46%。印度股市在上周录得 6% 涨幅（为 2021 年以来最强单周表现）后走低整理，投资者正在消化由原油驱动的反弹。Divi’s Labs 公布第二季度业绩显著超预期，医药板块领涨；银行和房地产板块亦跑赢大盘。IT 和金属板块滞后，塔塔钢铁在业绩大致符合预期且展望喜忧参半后走低。整体格局仍具建设性，因油价回落缓解通胀风险，10 年期收益率降至 7.18%，且 11 月初外资流入转为明确正值。券商情绪亦改善，花旗将 Nifty 目标上调至 28,000，汇丰将印度评级上调至“增持”，理由是盈利具有韧性且估值更为合理。 关键的近期问题是，此次回调是代表健康的盘整，还是在近期大幅波动后的获利了结，尽管持续的外资买入应有利于大盘基准权重股。
