TMTB EOD Wrap

TMT BREAKOUT
41 MINUTES AGO · PAID

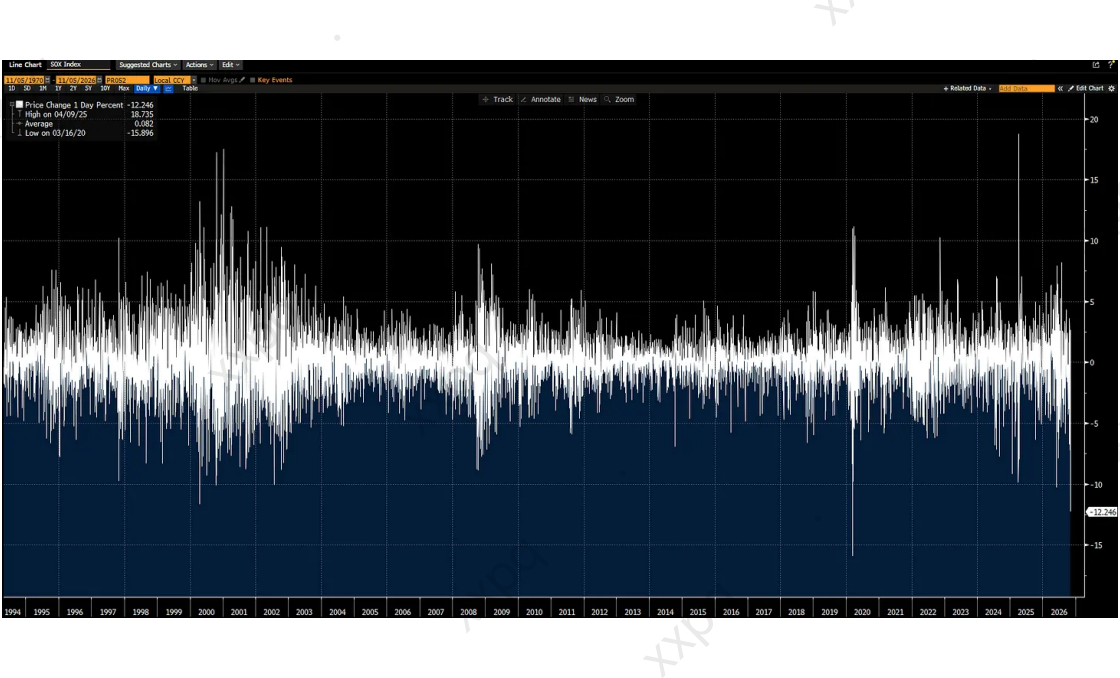
Listen

Good afternoon. I know you are all probably tired so I'll make this fairly quick. There are only so many ways to describe a crime scene. Let's get to it…

下午好。我知道大家可能都累了，所以我会尽量简短。描述犯罪现场的方式也就那么几种。我们直接开始吧……

QQQs -6.5% as the tech meltdown continued following dems sweep on Wednesday and the worst day since the April 2025 tariff panic. **Semis -13%** led the way lower as tech investors went from debating 2028 EPS to wondering whether they'll make it to Friday. Worst day since March 2020 (that was Covid btw) and 2nd worst day ever and closed near the lows. Here's SOX 1 day moves going back to 1994 (*h/t John):*

QQQs 下跌 6.5%，科技股崩盘在周三民主党大获全胜后持续蔓延，创下自 2025 年 4 月关税恐慌以来最糟糕的一天。半导体板块暴跌 13%领跌，科技股投资者从争论 2028 年每股收益（EPS）变成了怀疑自己能否撑到周五。这是自 2020 年 3 月以来最糟糕的一天（顺便说一句，那是新冠疫情时期），也是有史以来第二糟糕的一天，收盘价接近全天低点。以下是 SOX 指数自 1994 年以来的单日走势（h/t John）：



Some pointed to the Citrini piece yesterday (was out during the day) as a catalyst, and sure that didn't help things and neither did the election. But reality is the AI trade/narrative was already on fragile footing heading into the week so the results on Tuesday were more than enough fuel to catalyze significantly more selling.

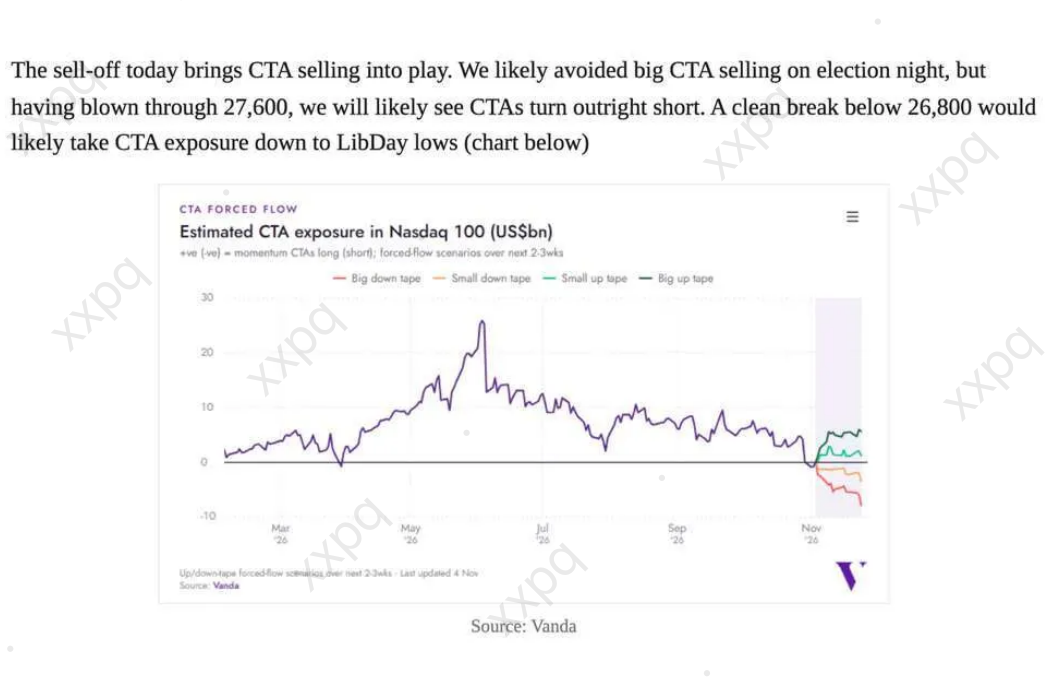
有人指出昨天 Citrini 的文章（白天发布的）是一个催化剂，当然那确实无济于事，选举结果也一样。但现实是，AI 交易/叙事在本周开始前就已经基础脆弱，因此周二的结果足以成为燃料，催化出规模大得多的抛售。

Despite weakness in semis, there was no place to hide today. Yesterday's index level relief had plenty of names green, but none of that today. Anecdotally (and also seeing some of the prime numbers being thrown around), the last month has been one of the toughest stretches for L/S books and it continues to get worse.

尽管半导体板块走弱，但今天却无处藏身。昨日在指数层面的反弹让许多个股翻红，但今天全无此景。凭经验感知（同时也看到了一些被抛出的惊人数字），过去一个月对多空基金来说是最艰难的时期之一，而且情况还在继续恶化。

Positioning and leverage continues to get unwound exacerbating the move lower. Lots of the usual fund trouble rumors going around and Walleye (multi manager) has announced they are slimming down their equity business. In terms of desk flows, widely differing reports across the street. For example, Jeff was out saying that LOs were very active today as a % of notional vs. HFs, while GS's desk was a lot quieter saying LOs were frozen out. QDS estimated retail sold ~$3B of US equities in the first hour, a -5.7 standard deviation event, and Nomura's McElligott has tonight's levered-ETF rebalance at -$47B (semis -$20.5B, tech -$17.3B), second only to 6/5's $51.3B, with dealers short ~$7B of gamma per 1%. And as is typical in moves down, selling begets more selling from CTAs:

头寸与杠杆继续解除，加剧了下行走势。大量常见的基金麻烦传闻四处流传，Walleye（多管理人基金）已宣布缩减其股票业务。就交易台流量而言，街上的报告差异很大。例如，Jeff 称今天 LOs 按名义金额占比非常活跃，而 HFs 则不然；但 GS 的交易台则冷清得多，称 LOs 已冻结出局。QDS 估计散户在第一个小时卖出了 ~$3B 的美国股票，这是一个-5.7 标准差事件，而野村的 McElligott 指出今晚杠杆 ETF 再平衡规模为-$47B（半导体-$20.5B，科技-$17.3B），仅次于 6/5 的$51.3B，交易商每 1%的 gamma 空头为 ~$7B。而且正如下跌走势中的常态，卖出引发了 CTA 更多的卖出：

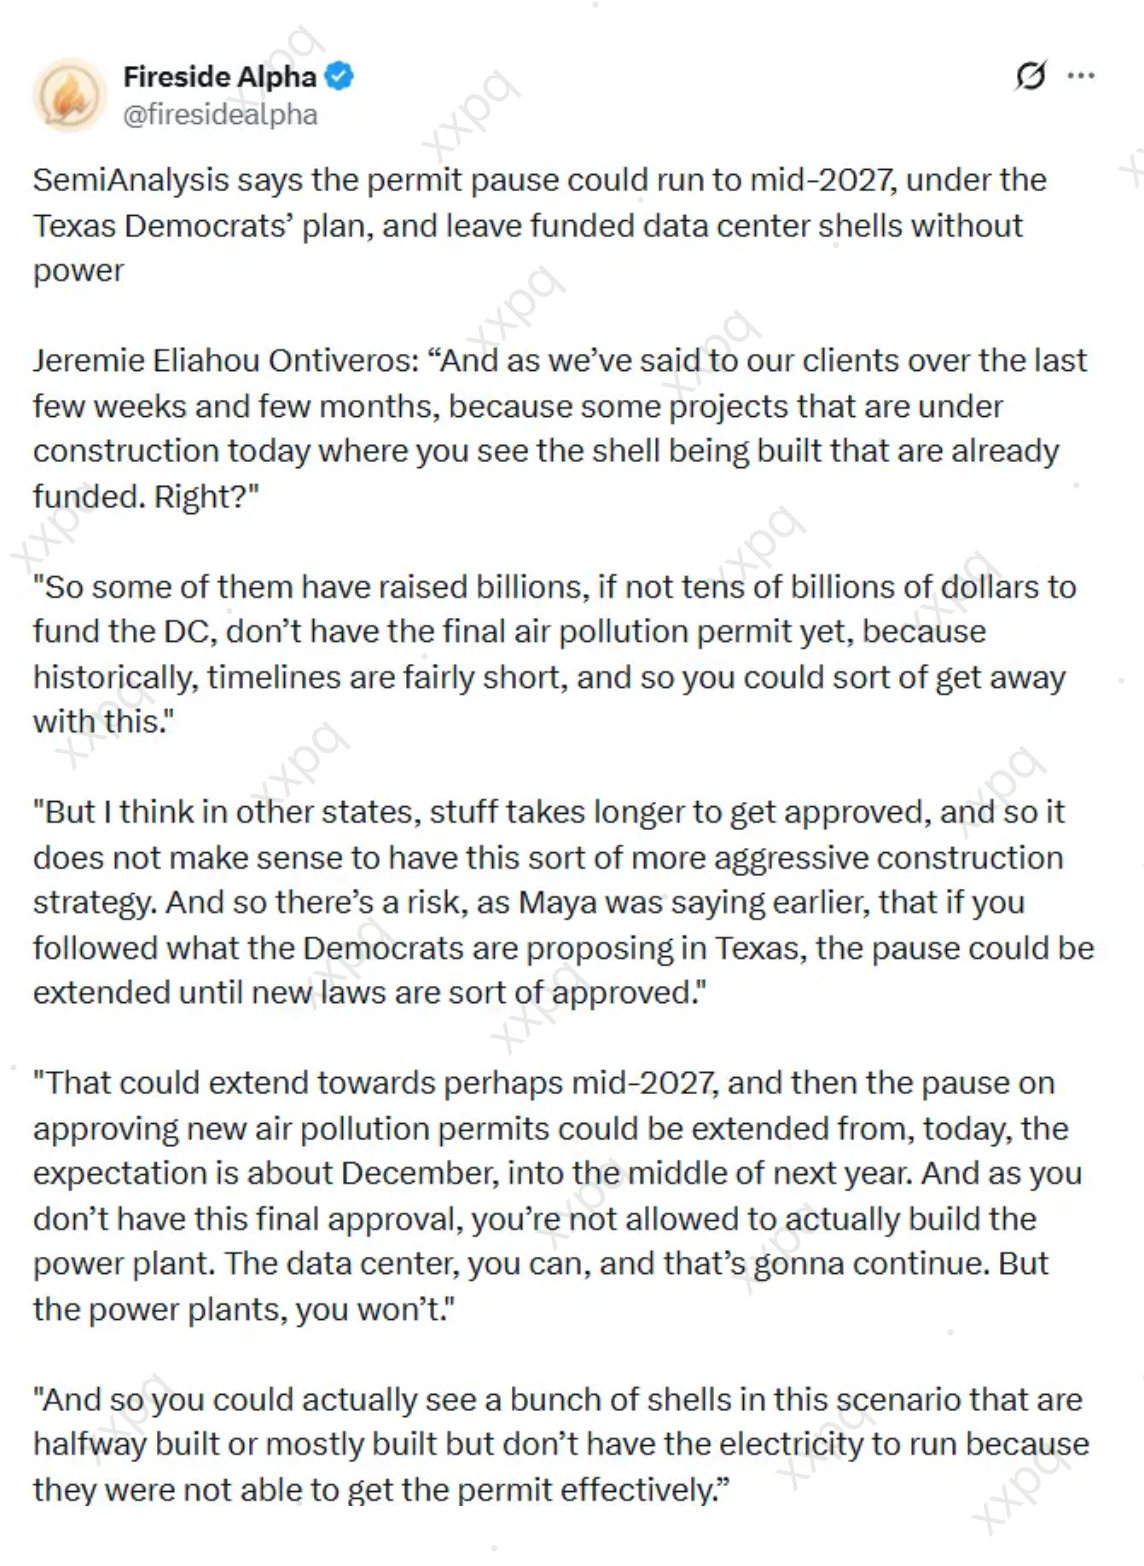


The sell-off today brings CTA selling into play. We likely avoided big CTA selling on election night, but having blown through 27,600, we will likely see CTAs turn outright short. A clean break below 26,800 would likely take CTA exposure down to LibDay lows (chart below)

Source: Vanda

We had thoughts from the election in yesterday's morning and EOD wraps, so we won't dive into that here as nothing has changed in one day. Texas continues to be a focus and Hinojosa was out on the press circuit saying she will pause new DC approvals until legislature passes new laws, although seems like current ones will be allowed to continue, although she didn't explicitly say that. Here's Semianaylysis' Ontiveros on the Texas Dem plan potentially leaving funded DC shells without power:

我们在昨天的早间和收盘总结中已经分享了关于选举的看法，所以这里就不再赘述，因为一天之内情况并无改变。德州依然是关注焦点，伊诺霍萨在媒体巡回采访中表示，在州议会通过新法律之前，她将暂停批准新的 DC，不过现有的项目似乎将被允许继续推进，尽管她并未明确表态。以下是 Semianalysis 的奥蒂维罗斯对德州民主党计划可能让已获资金的 DC 壳公司失去运营能力的分析：



Fireside Alpha
@firesidealpha

SemiAnalysis says the permit pause could run to mid-2027, under the Texas Democrats' plan, and leave funded data center shells without power

Jeremie Eliahou Ontiveros: "And as we've said to our clients over the last few weeks and few months, because some projects that are under construction today where you see the shell being built that are already funded. Right?"

"So some of them have raised billions, if not tens of billions of dollars to fund the DC, don't have the final air pollution permit yet, because historically, timelines are fairly short, and so you could sort of get away with this."

"But I think in other states, stuff takes longer to get approved, and so it does not make sense to have this sort of more aggressive construction strategy. And so there's a risk, as Maya was saying earlier, that if you followed what the Democrats are proposing in Texas, the pause could be extended until new laws are sort of approved."

"That could extend towards perhaps mid-2027, and then the pause on approving new air pollution permits could be extended from, today, the expectation is about December, into the middle of next year. And as you don't have this final approval, you're not allowed to actually build the power plant. The data center, you can, and that's gonna continue. But the power plants, you won't."

"And so you could actually see a bunch of shells in this scenario that are halfway built or mostly built but don't have the electricity to run because they were not able to get the permit effectively."

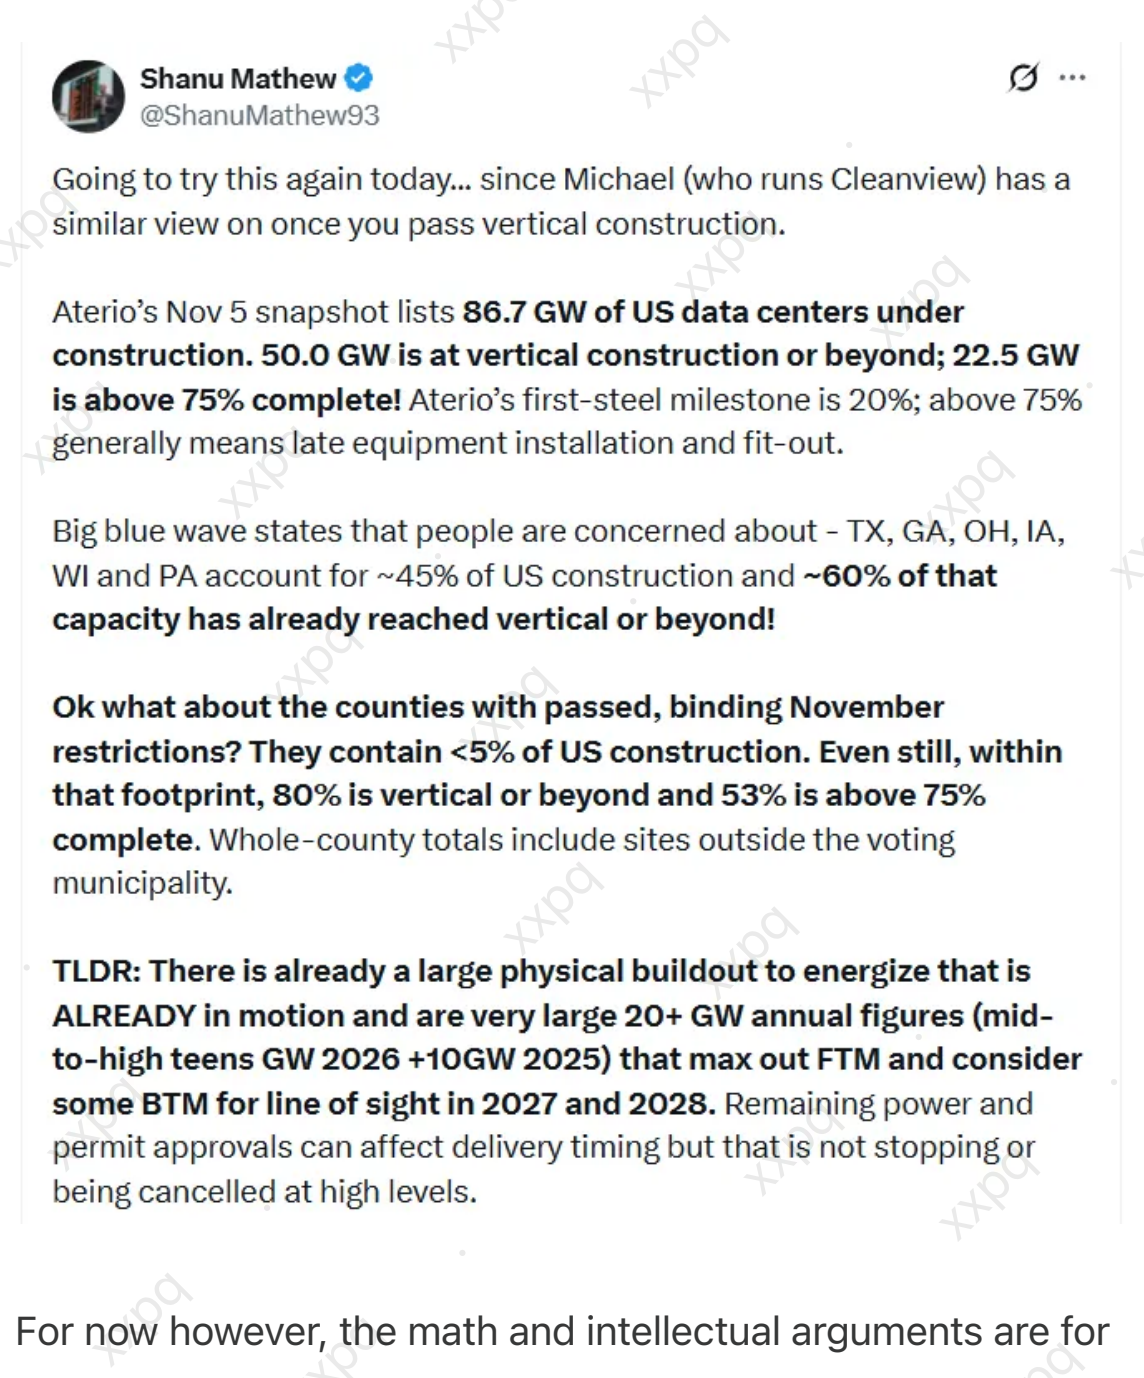
Bulls continue to pushback that there are already plenty of DCs in construction and that there are plenty of states and countries ready to bring job-creating DC opportunities to their localities.

多头继续反驳称，目前已有大量 DC 正在建设中，而且有许多州和国家已准备好将能创造就业的 DC 机会引入其所在地。

Google plans $17 billion Wyoming data center amid rising threats of curbs

Here's Shanu on how many DCs are currently under construction:

以下是沙努关于目前有多少 DC 正在建设中的观点：



Shanu Mathew
@ShanuMathew93

Going to try this again today... since Michael (who runs Cleanview) has a similar view on once you pass vertical construction.

Aterio's Nov 5 snapshot lists **86.7 GW of US data centers under construction. 50.0 GW is at vertical construction or beyond; 22.5 GW is above 75% complete!** Aterio's first-steel milestone is 20%; above 75% generally means late equipment installation and fit-out.

Big blue wave states that people are concerned about - TX, GA, OH, IA, WI and PA account for ~45% of US construction and **~60% of that capacity has already reached vertical or beyond!**

Ok what about the counties with passed, binding November restrictions? They contain <5% of US construction. Even still, within that footprint, 80% is vertical or beyond and 53% is above 75% complete. Whole-county totals include sites outside the voting municipality.

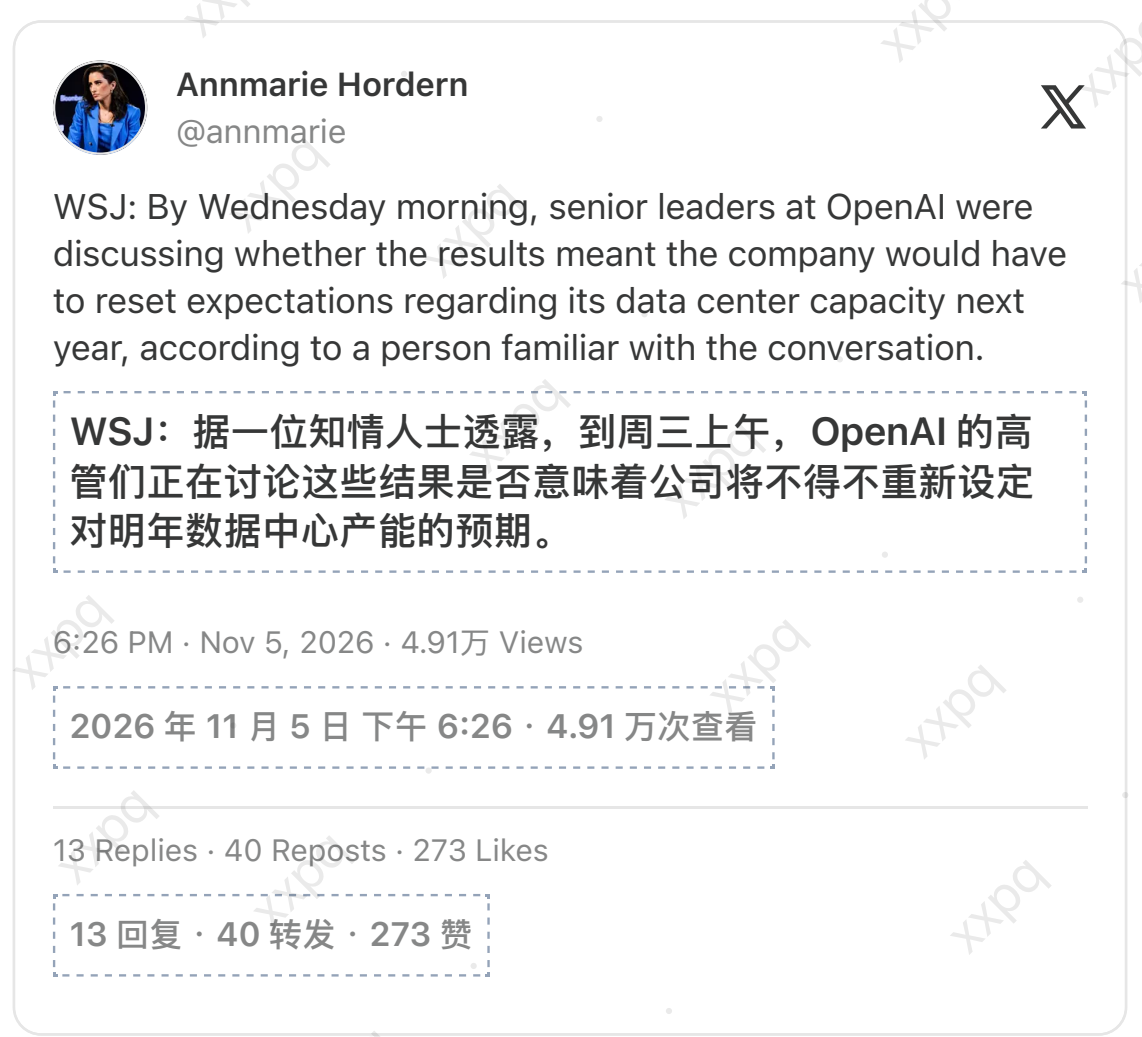
TLDR: There is already a large physical buildout to energize that is ALREADY in motion and are very large 20+ GW annual figures (mid-to-high teens GW 2026 +10GW 2025) that max out FTM and consider some BTM for line of sight in 2027 and 2028. Remaining power and permit approvals can affect delivery timing but that is not stopping or being cancelled at high levels.

For now however, the math and intellectual arguments are for another day. Tech investors are just trying to survive the current drawdown where flows and positioning are more important than anything else right now. I'm sure many will spend the weekend trying to figure out risk prices given certain levels of DC pullback - we're itching to have some free time to dig down. Still: here at TMTB we're always for clean set ups and this is far from one. We're don't like catching knives. For now — similar to us, we don't hear many trying to stick their neck out in this environment.

然而就目前而言，数学和理论上的论证留待他日。科技投资者只想在当前的回撤中生存下来，此时资金流向和仓位比任何其他因素都更重要。我确信许多人会花整个周末去推算在 DC 回调至特定水平下的风险定价——我们也正渴望能有些空闲时间深挖一下。不过：在 TMTB 这里，我们始终青睐干净的建仓机会，而眼下远非如此。我们不喜欢徒手接飞刀。目前——和我们一样，我们没听到有多少人想在当前环境下伸长脖子去冒险。

On the Lab front, this tweet got a lot of play today:

在 Lab 这边，今天这条推文引发了大量讨论：



Annmarie Hordern
@annmarie

WSJ: By Wednesday morning, senior leaders at OpenAI were discussing whether the results meant the company would have to reset expectations regarding its data center capacity next year, according to a person familiar with the conversation.

WSJ：据一位知情人士透露，到周三上午，OpenAI 的高管们正在讨论这些结果是否意味着公司将不得不重新设定对明年数据中心产能的预期。

Bloomberg then reported late morning that MSFT stepped away from three Nscale projects and increased oversight of NBIS, IREN and Nscale, with delays tied to an IREN Texas site that has cabling issues, on top of the FT's ~500MW Nscale option MSFT passed on.

随后彭博在上午晚些时候报道，MSFT 退出了三个 Nscale 项目，并加强了对 NBIS、IREN 和 Nscale 的监督，延误与存在线缆问题的 IREN 德克萨斯州站点有关，此外还有 FT 报道的 MSFT 放弃的~500MW Nscale 选项。

And lest we forget, we still have Anthropic roadshow beginning next week (and potential for an Oct ARR # where bulls want to see $78B+ (Assuming a $70B September) and bogey sitting around ~$75B, although will any of it matter? There's always the flip side that a better Oct # likely meant a worse Oct # for OAI as the two play on taking market share from each other.

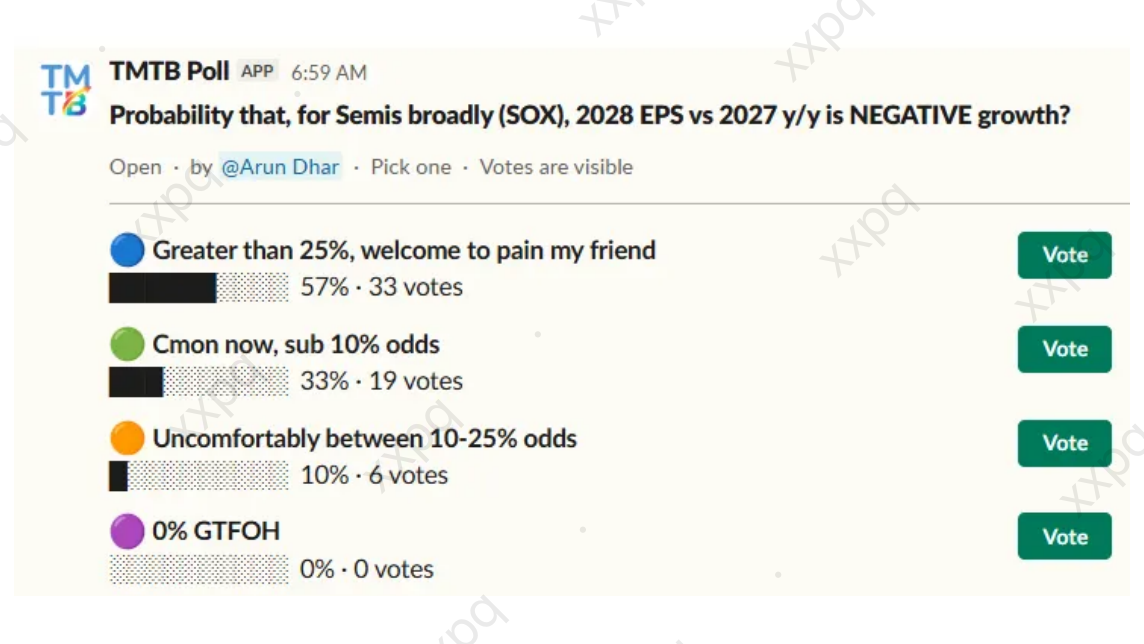
而且别忘了，我们还有 Anthropic 路演将于下周开始（以及 10 月 ARR #的潜力，多头希望看到 780 亿美元以上（假设 9 月为 700 亿美元），而目标值大约在 ~$75B，尽管这一切有意义吗？总会有另一面，更好的 10 月#可能意味着 OAI 更差的 10 月#，因为两者在从彼此手中争夺市场份额。

Consensus among investors is that they NEED to come to market so the IPO will get done (*Arun:* "shoring up adequate capital in the private markets in lieu of an IPO is 5x harder right now."). Still Polymarket/Kalshi have odds of coming out by November 30th at only 65%.

投资者的共识是他们必须上市，因此 IPO 将会完成（Arun："目前在没有 IPO 的情况下，在私募市场筹集充足资本的难度是前者的 5 倍。"）。尽管如此，Polymarket/Kalshi 预测其在 11 月 30 日前上市的概率仅为 65%。

Just ugly all around (especially in semis) and really not worth going into individual names as majority of semis were down double digits and many down 15-20%. MS has the SOX at 9.9x 2-year forward P/E, down from a 30x peak two years ago and the first single-digit read since 2011 fwiw, but '28 numbers right now "fugazzi" as a close friend of ours put it.

各方面都惨不忍睹（尤其是半导体板块），确实不值得逐一列举个股，因为大多数半导体股都下跌了两位数，许多甚至下跌了 15-20%。MS 显示费城半导体指数（SOX）的 2 年远期市盈率为 9.9 倍，低于两年前 30 倍的峰值，顺便说一句，这也是自 2011 年以来首次降至个位数，但目前 2028 年的预测数据正如我们的一位密友所言，纯属"虚晃一枪"。



TMTB Poll APP 6:59 AM
Probability that, for Semis broadly (SOX), 2028 EPS vs 2027 y/y is NEGATIVE growth?
Open · by @Arun Dhar · Pick one · Votes are visible

- Greater than 25%, welcome to pain my friend — 57% · 33 votes — Vote
- Cmon now, sub 10% odds — 33% · 19 votes — Vote
- Uncomfortably between 10-25% odds — 10% · 6 votes — Vote
- 0% GTFOH — 0% · 0 votes — Vote

Software -4.4% and internet went along for the ride, and yesterday's hyperscaler hiding spot didn't hold, although still outperformed handedly: META -4%; MSFT -3.6%; AMZN -2%; GOOGL -2% (AMZN was up as much as 2.7% at one point).

软件 -4.4%，互联网随之跟跌，昨天超大规模云服务商的避风港也没能守住，不过表现仍大幅跑赢：META -4%；MSFT -3.6%；AMZN -2%；GOOGL -2%（AMZN 盘中一度上涨达 2.7%）。

In macro land, the safe haven bid finally showed up in bonds: **10Y -6bps**, near a two-month low, even with initial claims at a low 189K. December hike odds slipped to ~70% from ~80% yesterday (~18bps priced for the rest of 2026), with ~55-60bps of hikes priced through 2027 as of yesterday's close. **Oil +3%** as the IRGC said two tankers and a tug caught fire using unauthorized Hormuz routes and Eurasia cut its odds of a US-Iran deal to 10% from 20%.

宏观层面，避险买盘终于现身债市：10 年期国债收益率 -6 个基点，逼近两个月低点，即便初请失业金人数处于 189K 的低位。12 月加息概率从昨天的~80%下滑至 ~70%（2026 年剩余时间计价约 18 个基点），截至昨日收盘，至 2027 年累计计价加息~55-60 个基点。原油 +3%，因伊斯兰革命卫队（IRGC）称两艘油轮和一艘拖船在未经授权的霍尔木兹航线上起火，且欧亚集团将美伊达成协议的概率从 20%下调至 10%。

A few things to call out quickly:

快速强调几点：

- **U +15%:** This stock always acts a bit weird T+1 and given the S APP / L U bent going in and the unwindy nature of today, I'd call +15% a win. Overall, print was great as Vector keeps outrunning guide +40% vs bogeys of high 20s with biggest beat so far and Q4 guide implying accel to 145% y/y. Bromberg put the acceleration mostly on "greater volume of installs and higher player values, not changes in take rate." In terms of magnitude of beat, the CFO called 3Q "a significant unforeseen step change" and said they weren't changing how they guide, Bromberg said "Every quarter is not going to be a 40% quarter," and neither gave 2027 Vector or EBITDA numbers. Hearing buyside numbers '27 EBITDA #s getting close to 1.8B to 2.0B given the big EBITDA incrementals, and throw 20xon that = $80+ stock price.

  U +15%：这只股票在 T+1 的表现总是有点怪异，考虑到入局时的 S APP / L U 倾向以及今天缺乏波动性，我会把 +15% 视为一次胜利。总体而言，财报表现很棒，因为 Vector 持续跑赢指引 +40%，对比 20% 多的基准，这是迄今为止最大的超预期幅度，且 Q4 指引暗示同比加速至 145%。Bromberg 将加速主要归因于"安装量更大和玩家价值更高，而非抽成率的变化。"就超预期的幅度而言，CFO 称 3Q 是"一次重大的、未预见到的阶跃变化"，并表示他们不会改变指引的方式；Bromberg 说"并非每个季度都会是 40% 的季度"，两人也都未给出 2027 年 Vector 或 EBITDA 的数字。听闻买方数据，鉴于巨大的 EBITDA 增量，27 年 EBITDA 数字正接近 18 亿至 20 亿，再乘上 20 倍，即等于 80 美元以上的股价。

- **APP +30%** as shorts scrambled to cover what was a favorite funding short this past q. Overall, a very solid print with first rev accel after 4 straight decels (although the 2 year stack still decel'd) and biggest beat vs. street since Q1'25. Overall, think this is enough to get stock out of the funding short camp especially since its still trading at high teens post the move and get nascent bulls to dig in given commentary around "Axon 3.0", but think likely needs another +ve performance from Adam to get LOs back on board.

  APP +30%，因空头争相回补这一过去季度中最受青睐的融券做空标的。总体而言，业绩非常扎实，在连续 4 个季度减速后迎来了首次营收加速（尽管 2 年复合增速仍在减速），且创下了自 25 年 Q1 以来相对华尔街的最大超预期幅度。总体来看，认为这足以让该股脱离融券做空阵营，尤其考虑到在此次上涨后其仍以近 20 美元的价格交易，且围绕"Axon 3.0"的论述能让初期的多头坚定立场，但认为可能还需要 Adam 再交出一份正面的业绩表现，才能让 LOs 重新上车。

- **DASH -9.4%** (down as much as -15.7% around 11am) after Uber Eats replaced Grubhub as Prime's US restaurant partner, live today: Prime members get a $0 delivery fee on restaurant orders of $25+ through AMZN (service fees still apply), while **UBER -1.6%** held in better.

  DASH -9.4%（在上午 11 点左右一度下跌达-15.7%），此前 Uber Eats 取代 Grubhub 成为 Prime 的美国餐厅合作伙伴，今日已上线：Prime 会员通过 AMZN 订购 25 美元以上的餐厅订单可享 $0 配送费（服务费仍适用），而 UBER -1.6% 表现相对抗跌。

- **TTWO +2%** continues to act better into GTA VI release in a couple weeks and I can sense the excitement vibes start to pick up. Stock +15% this week. Today M-sci had some positive checks calling for possible 50M units in 3Q.

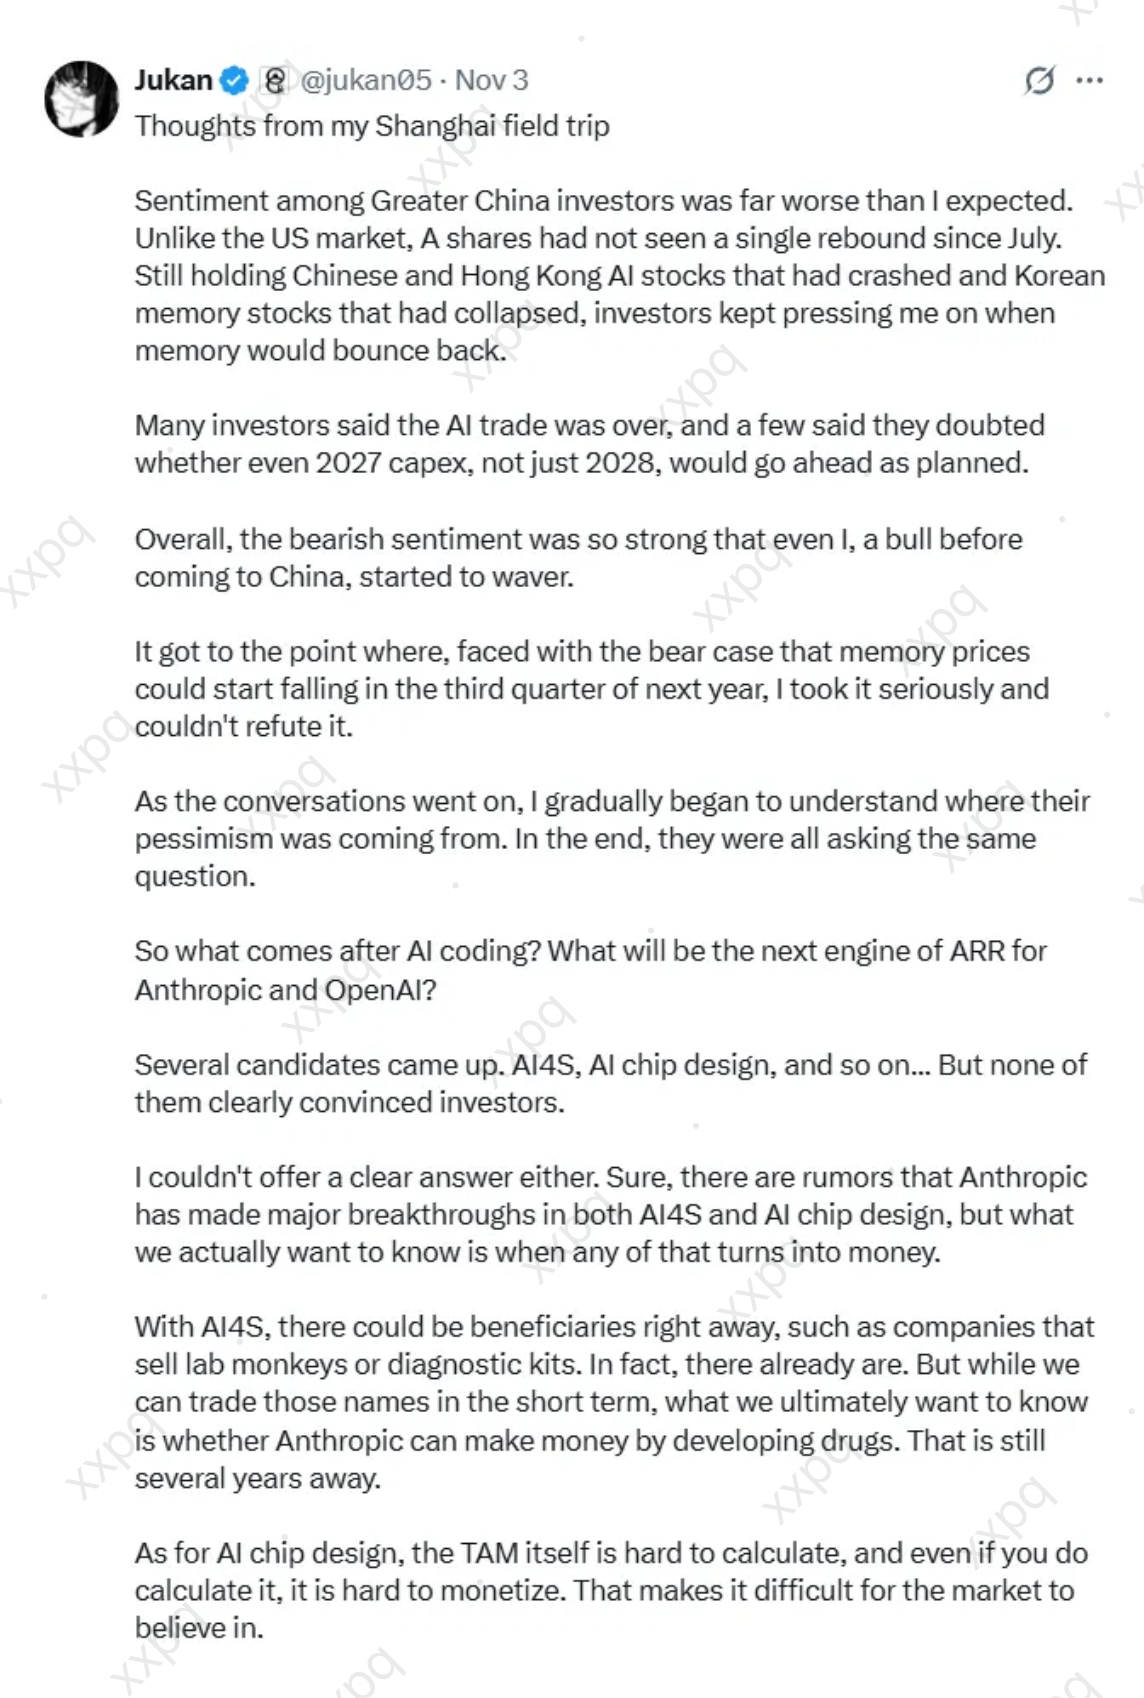
  TTWO +2% 继续表现向好，迎接几周后 GTA VI 的发布，我能感觉到兴奋的氛围开始升温。本周股价 +15%。今天 M-sci 传来一些积极的调研，预计第三季度销量可能达到 50M 台。

- Rotation in to China internet today (who knows why?): **NTES +4.4%; JD +3.3%; BILI +2.7%; BABA +2.6%; PDD +2.2%**

  今日资金轮动至中国互联网股票（谁知道原因是什么？）：NTES +4.4%；JD +3.3%；BILI +2.7%；BABA +2.6%；PDD +2.2%

Speaking of China, Jukan with some thoughts from his recent China trips, where he calls out Asia investors being a lot more negative than U.S.:

说到中国，Jukan 分享了他近期中国之行的一些想法，他指出亚洲投资者比美国投资者要悲观得多：



Jukan @jukan05 · Nov 3
Thoughts from my Shanghai field trip

Sentiment among Greater China investors was far worse than I expected. Unlike the US market, A shares had not seen a single rebound since July. Still holding Chinese and Hong Kong AI stocks that had crashed and Korean memory stocks that had collapsed, investors kept pressing me on when memory would bounce back.

Many investors said the AI trade was over, and a few said they doubted whether even 2027 capex, not just 2028, would go ahead as planned.

Overall, the bearish sentiment was so strong that even I, a bull before coming to China, started to waver.

It got to the point where, faced with the bear case that memory prices could start falling in the third quarter of next year, I took it seriously and couldn't refute it.

As the conversations went on, I gradually began to understand where their pessimism was coming from. In the end, they were all asking the same question.

So what comes after AI coding? What will be the next engine of ARR for Anthropic and OpenAI?

Several candidates came up. AI4S, AI chip design, and so on... But none of them clearly convinced investors.

I couldn't offer a clear answer either. Sure, there are rumors that Anthropic has made major breakthroughs in both AI4S and AI chip design, but what we actually want to know is when any of that turns into money.

With AI4S, there could be beneficiaries right away, such as companies that sell lab monkeys or diagnostic kits. In fact, there already are. But while we can trade those names in the short term, what we ultimately want to know is whether Anthropic can make money by developing drugs. That is still several years away.

As for AI chip design, the TAM itself is hard to calculate, and even if you do calculate it, it is hard to monetize. That makes it difficult for the market to believe in.

See you tomorrow! 明天见！
