TMTB Morning Wrap TMTB 晨间综述

TMT BREAKOUT
7 MINUTES AGO • PAID

Good morning. **QQQs -1.2% / SPX -35bps** after a set of less than great Tech earnings overnight: **GOOGL -11%** on a search miss that has bears salivating on AI concerns, **MSFT +2%** fading on CFO opening the door to an equity raise, **NOW -18%** with a huge whiff taking down app software with it **(software -4%)**, **FTNT -25%** an even bigger whiff with bears finally getting paid taking, Cyber names down along with it **(PANW/CRWD/OKTA -7%)**. **EBAY +4.5%** on a set of better numbers.

早上好。QQQ 下跌 1.2%，SPX 下跌 35 个基点，此前隔夜公布了一系列不太理想的科技股财报：GOOGL 下跌 11%，因搜索业务不及预期，这让看空者垂涎欲滴，对 AI 忧心忡忡；MSFT 上涨 2%后回落，因 CFO 为股权融资打开了大门；NOW 下跌 18%，一次巨大的业绩落空拖累了应用软件板块（软件板块下跌 4%）；FTNT 下跌 25%，业绩落空幅度更大，看空者终于得偿所愿，网络安全股也随之走低（PANW/CRWD/OKTA 下跌 7%）。EBAY 上涨 4.5%，因公布了一系列较好的数据。

Outside of earnings, **Semis -2.2**% with some pointing to the lower than expected headline capex #s from **GOOGL/MSFT** although q-specific reasons for each of those. **META +1%** getting some love after the GOOGL miss. Neoclouds lower with **NBIS -7%** as some speculating the **MSFT** 3p capacity delay is them. **LITE +5%** as **MRVL -11%** said to be in advanced talks to buy them. CART +5% (halted) as **DASH** to acquire them for $65/share. **Samsung -4%** after an operating profit miss and delaying capital return announcement until end of Jan.

在财报之外，半导体板块下跌 2.2%，部分人士指出这与谷歌/微软低于预期的总体资本支出数字有关，尽管这两家公司各有其季度-specific 的原因。Meta 上涨 1%，在谷歌令人失望的业绩后获得了一些青睐。新云厂商走低，NBIS 下跌 7%，因为一些人猜测微软第三方产能延迟指的就是他们。LITE 上涨 5%，而 MRVL 下跌 11%，据称后者正在就收购前者进行深入谈判。CART 上涨 5%（停牌），因 DASH 将以每股 65 美元收购该公司。三星下跌 4%，此前其营业利润不及预期，并将资本回报公告推迟至 1 月底。

Another busy night tonight with **AMZN** the big one. We dive into **GOOGL, MSFT, KLAC, FTNT, and NOW** below, then the usual.

今晚又是忙碌的一晚，重点关注亚马逊这家公司。接下来我们会分析谷歌、微软、KLAC、FTNT 以及 NOW 这些股票的表现，之后则是常规的分析内容。

Let′ get to it... 我们开始吧.....

EARNINGS

GOOGL -11%: Just an overall bad print on the 3 KPIs that mattered most: search, GCP & EBIT. Search missed at +12% vs. Street's 14.7% and the ~13-14% buyside bar, Cloud ($30.7B) beat Street but fell short of $31-32.5B bogeys, and EBIT missed by ~$2.8B. YT miss. Cloud EBIT beat the one bright spot although that's being debated as well.

GOOGL -11%：最重要的 3 项关键绩效指标——搜索、GCP 和 EBIT——整体表现不佳。搜索业务未达预期，增长 12%，低于华尔街预期的 14.7%以及买方~13-14%的门槛；云业务（307 亿美元）虽超出华尔街预期，但未达到 310-325 亿美元的预期目标；EBIT 则差了约~28 亿美元。YouTube 也表现不佳。云业务 EBIT 超预期是唯一的亮点，不过这一点也引发了争议。

Stock was shorted coming in but this was worse that expected and helping feed bearish investor fears that search is AI hampered. Comps continue to get tougher for the next couple quarters and just running the decel forward gets you to something like 7% search growth in Q1. Lots of talk from bears in Slack saying downside is now 15x

unless they can show evidence of monetization. AI Mode is diluting Search monetization (paid clicks +8% on five-year-high query growth) as Google struggling to figure out how to monetize AI. Sundar and Philipp really didn't say much to help things on the call. CY27 Buyside EPS coming down to a more street ineline-ish # around ~15-$15.50 although bears will frame an even lower #. A 20x gets you <$290, which is where stock is at while bears will push for a teens multiple given the search decel & fears.

该股在财报前就遭到做空，但实际情况比预期更糟，助长了看空投资者的担忧，即搜索业务受到 AI 拖累。未来几个季度同比基数继续变得更难，仅将减速趋势外推，就能得出第一季度搜索增长约 7%的结果。Slack 上看空者大量讨论称，除非公司能拿出变现的证据，否则下行空间现在看向 15 倍。AI Mode 正在稀释搜索变现（付费点击量增长 8%，查询量创五年新高），谷歌仍在艰难摸索如何将 AI 变现。Sundar 和 Philipp 在电话会上真的没说什么能提振局面的话。CY27 买方 EPS 正降至更接近街面共识的约 15 至 15.50 美元，尽管看空者会给出更低的数字。20 倍市盈率对应不到 290 美元，这正是股价当前所处位置，而鉴于搜索减速和种种担忧，看空者会推动 teens 倍数。

Remember this is a company where Total Ads are still 65% of the topline (and ~80% of the EBIT) so the Cloud not really big enough to make up for search fears. Uphill battle for Google longs now.

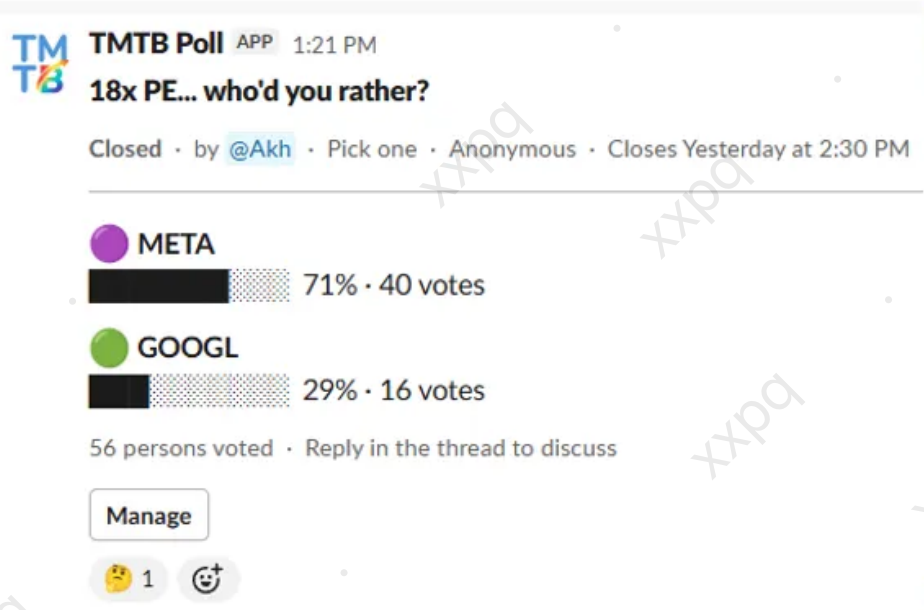

请记住，这家公司的广告收入仍占其总收入的 65%，而云业务相关收入则仅占 EBIT 的 80%左右。因此，云业务尚不足以弥补搜索业务带来的损失。对谷歌来说，现在面临着艰难的挑战。

R

META +1% as its looking a lot better in comparison after the print, with 70% of investors in Slack preferring to pay 18x for META vs. GOOGL and pointing to META's better ROI:

在公布财报后，META 的走势明显好转，因此其股价上涨了 1%。在 Slack 平台上，70%的投资者愿意为 META 支付 18 倍的市盈率，而非 GOOGL；他们认为 META 的投资回报率更高。

Lots of Bearish Investor feedback overnight in the Slack earnings thread:

昨晚在 Slack 的业绩讨论帖中，出现了大量看跌投资者的反馈：

“Lower monetization on AI queries. He basically just admitted it’s going to be a transition between AI Overviews and search… Search going off patent.”

“AI 查询的货币化收益会降低。他实际上已经承认，未来将是 AI 概览与传统搜索之间的过渡阶段……因为传统搜索技术即将失去专利保护。”

“AI Overviews / AI Mode are cannibalizing traditional search queries and are not really being monetized, at least not even close to traditional search levels. They gave a lot of stats on AI improving their ad engines, but it just seems like the monetization layer for these cannibalizing modes isn’t there yet. AI search ad monetization does seem harder to crack than social.”

“AI 搜索功能/AI 模式正在抢走传统搜索功能的用户流量，而且目前还无法实现有效的商业化变现，其变现能力远远不及传统搜索功能。虽然有诸多数据表明 AI 技术提升了广告引擎的性能，但这些功能似乎还缺乏相应的商业化机制。相比社交平台，AI 搜索功能的商业化确实更难实现。”

“Meta is proof that LLMs can improve ad performance materially. We’ve had ~2 years straight of Meta growing CPMs and impressions at the same time. That never happened before. So Google blaming lower monetization just feels wrong. Q/q: Meta’s Family of Apps +$3.8B, Search +$79M. Zero reason to own this stock over Meta.”

“Meta 就足以证明 LLMs 能够显著提升广告效果。过去 1001 年里，Meta 的每千次展示费用与展示次数始终同步上升，这种情况此前从未发生过。因此，谷歌以变现能力下降为由来解释这一现象显然是站不住脚的。环比来看，Meta 的各类应用带来的收入增长了 38 亿美元，搜索业务则增长了 7900 万美元。相比 Meta 而言，根本没有理由选择持有其他公司的股票。”

“8% paid click growth y/y... in line with my backsolve, still decel on 2y/3y stacks.”

“点击量同比增长 8%……与我的预测一致；不过与两年期及三年期的数据相比，增长速度仍在放缓。”

“This will derate to 18x. Underwriting $15 was also dependent on Search holding up better, and $15 might be high given the opex trend. 15x feels like the near-term floor, but that’s a big haircut from here.”

“这一数值将会降至 18 倍。当初定为 15 美元的估值也是基于搜索业务能表现更好的前提；而考虑到运营成本的变化趋势，15 美元这个数字可能偏高了。18 倍似乎是短期的最低估值，但相比现在而言，这仍然是一个大幅的估值下调。”

“15x is the floor if Search is a ~10% grower but a share donor. If Google loses consumer agents and it turns into a structural issue, obviously heading for a single-digit P/E.”

如果 Search 的增长率仅为 101%，且还需分出部分利润给其他方，那么 15 倍就是其最低估值。而如果谷歌失去消费者支持，进而出现结构性问题，那么其市盈率显然会降至个位数。

“Everyone we know, behavior shift from Google search to AI chatbots, only a matter of time for normies to do the same... Haven’t used Search in 3 months. They have a problem.”

我们认识的每个人都在从使用谷歌搜索转向使用人工智能聊天机器人，普通人也会这么做只是时间问题而已……我已经 3 个月没用过谷歌搜索了。他们有问题。

“GOOGL headcount also unhinged. Headcount is nuts. I mean, opex is going crazy. Headcount hitting an all-time high for the AI company... Why so many people? It’s not like there’s that many excellent AI scientists to be had.”

“谷歌的员工数量也失控了。员工人数多得离谱。运营成本更是高得惊人。这家人工智能公司的员工数量创下了历史新高……为什么需要这么多人呢？毕竟优秀的 AI 科学家又不是那么好找的。”

“A significant portion of Gemini/DeepMind R&D expenses sits within Alphabet-level activities, outside the Cloud segment… This brings adjusted Cloud EBIT to $6.5bn, with a 21.3% margin, down ~30bps q/q.”

“Gemini/DeepMind 的研发支出中，有很大一部分用于 Alphabet 层面的项目，而非云业务领域……因此，调整后的云业务息税前利润为 65 亿美元，利润率为 21.3%，环比下降 1001#30 个基点。”

“Analyst: how come you aren’t giving us TPU margins? Google: ramble ramble ramble, ‘we don’t break out margins for individual products.’ Maybe GOOGL should split TPU sales from GCP. Create a chip unit, so to speak. Will make it a lot easier to dissect the numbers. GOOG is gonna have to grow up and guide. It ain’t got the luxury any more.”

“分析师：为什么不向我们提供 TPU 的利润数据呢？谷歌的回应则是些无关紧要的废话，声称‘不会单独披露各类产品的利润’。或许谷歌应该将 TPU 的销售额与 GCP 的销售额分开统计，设立一个专门的芯片业务部门。这样就能更轻松地分析相关数据了。谷歌必须成熟起来，承担起应有的责任——它已经没有资格再这么任性了。”

“Cracking chatbot queries is just harder. Fine line between retention and monetization. But honestly the call was a disaster. There are good things to say about TPUs, and probably GCP too, but it just got lost in the noise… Rushing to release the model was the tell.”

“解决聊天机器人的相关问题实在很困难。在用户留存与商业变现之间需要找到平衡点。不过说实话，那次演示简直一团糟。TPU 确实有优点，GCP 也可能不错，但这些优点都被其他杂音给掩盖了……急于推出该模型，就是最明显的证据。”

“Since the market is so focused on how this all gets paid for, weakness in their cash cow as a funding source would be a big deal for the entire complex, which is short cash.

“由于市场一直关注这些开支该如何筹措，而作为资金来源的核心业务表现不佳，将会对整个资金紧张的机构造成严重影响。”

“Largest post-earnings puke in GOOGL in 10 years / 40 quarters? If Alphabet falls more than 9.77% tomorrow, it will be its worst earnings reaction day in its history as a public company.”

“这是 GOOGL 10 年来/40 个季度以来最严重的业绩发布后股价暴跌情况。如果 Alphabet 明天的股价跌幅超过 9.77%，那将是其作为上市公司以来最糟糕的业绩反应表现。”

Bulls had little to point arguing Google can still figure out monetization:

牛市人士几乎没有理由认为谷歌仍无法找到盈利方式：

“I think both can be true actually. The multi-turn nature of AI Mode leads to more queries per user even if there is a leaky bucket for users overall. They just haven’t hit on the right monetization model that maintains usage/engagement AND leads to comparable revenue per click as traditional search… So far, they had navigated the initial AI transition quite well. TBD if that remains the case, but no reason to just assume they won’t.”

“其实，这两种情况都有可能成立。由于 AI 模式具有多轮交互的特性，即使整体用户数量有限，每个用户仍会提出更多查询。他们只是尚未找到一种既能保持用户使用频率和参与度，又能让每次点击带来的收入与传统搜索相当的商业化模式……到目前为止，他们在 AI 模式的过渡阶段表现得相当不错。未来是否还能保持这种状况还有待观察，但没有理由认为他们做不到。”

“Ad growth was bad across the board including YT, and tough comps didn’t help. The story seems to be queries are fine, but monetization not so much… Not in the disruption camp just yet. Seems like an overreaction to a bad quarter.”

“包括 YouTube 在内的所有平台的广告收入都表现不佳，激烈的竞争状况更是雪上加霜。看起来搜索量还算正常，但盈利情况却不太好……目前还谈不上出现颠覆性变化。这似乎是对这一糟糕季度的过度反应罢了。”

“Cloud ‘miss’ is arguable given how much the bogey shifted, but no excusing search.”

鉴于那个障碍物的位置发生了如此大的变化，称其为“错过”还有商榷余地，但无论如何都不能成为停止搜寻的借口。

“If you use Google still, they have a glass half full argument for better monetization in the future. Once you’re in AI Mode and can get more of what you need through additional queries, you click through less (and off Google), and if they monetize, it

could be lucrative.”

“如果你仍然使用谷歌，从长远来看，他们有理由认为通过更好的盈利模式来实现发展。一旦进入人工智能模式，用户可以通过更多查询来获取所需信息，从而减少点击其他网站的行为。如果他们能从中获利，那将会非常可观。”

“Feels like they want to make the ads on AI Overviews more targeted using all the info they have on you from Gmail, Photos, etc. Meta has been running wild with this for over a year, but GOOGL finally decided to rip the band-aid and use the rest of your data to start improving targeting.”

“看起来他们想利用从 Gmail、照片等平台获取的关于你的所有信息，让 AI 概览功能中的广告更具针对性。Meta 已经在这方面大肆操作了一年多，而 GOOGL 终于决定采取行动，利用你其余的数据来提升广告的定向精度。”

“Google Network accelerated by +128bps on a constant-currency 2-year stack, which is almost the exact mirror image of Search’s -136bps 2-year deceleration… Because PMax was blocked from showing the ad during the AI Mode search session, it just serves the product ad on Google Network instead.”

按固定汇率计算，Google Network 的增速为+128bps，这与 Search 在两年内的-136bps 的增速趋势几乎完全相反……由于在 AI 模式搜索过程中 PMax 无法展示广告，因此它只能通过 Google Network 来展示产品广告。

“Don’t think anyone is doubting the EPS potential. Think everyone is pondering what multiple to use.”

“没人会怀疑 EPS 的增长潜力。大家都在思考应该采用怎样的估值倍数。”

MSFT +2: Azure above buyside bogeys accelerating to 48% and guided to 49-50% on capex delay, but the stock gave back most of its after-hours pop as investors fixated on a new “additional sources of funding” line & capex noise

MSFT 上涨 2%：由于资本支出方面的问题，Azure 业务面临的购买压力加剧，相关比例已升至 48%，预计还会上升到 49-50%。不过，由于投资者关注到"新的资金来源"这一表述以及资本支出相关的消息，该股在盘后上涨的幅度已经大部分被抹平了。

Overall, very solid print for one of the most crowded longs in Tech. Azure print and guide stole the show — even despite the 3p capacity delays as mgmt talked up driving efficiencies across Azure which allowed them to beat ("each dollar of CapEx has the potential to support more revenue and higher returns over time").

总体而言，作为科技行业中最受关注的股票之一，它的表现相当出色。Azure 业务的相关数据及分析报告成为了焦点——尽管存在 3P 产能方面的延迟问题，但管理层仍强调通过提升 Azure 业务的效率来获得更好的业绩；他们认为"每投入一美元的资本支出，都能带来更多的收入和更高的回报"。

Lots of questions this morning on why stock isn't up more. The answer comes down to Amy leaving the door open to an equity raise *(every person I talked to said mistake not to keep it closed)*, although she also made it clear that equity is below other options and their hint at using debt despite their FCF suggests their capex might be larger than the 220B bogey, which they can pretty comfortably handle with FCF. They supposedly pushed back even more on an equity raise in the callbacks saying possibility is very low. The other bearish nit was M365 growing slower although price & upsell was still strong and the co-pilot number going undisclosed.

今天早上有很多人问为什么股价没有涨更多。答案归结为 Amy 没有排除股权融资的可能性（我交谈过的每个人都说不排除是个错误），尽管她也明确表示股权融资的优先级低于其他选项，而且他们暗示尽管有自由现金流仍会使用债务，这表明他们的资本支出可能比 2200 亿的目标更大，而他们用自由现金流可以相当轻松地应对。据说他们在回电中更加坚决地否定了股权融资的可能性，称可能性非常低。另一个看空的细节是 M365 增长放缓，尽管价格和追加销售仍然强劲，而且 Copilot 的数字未予披露。

Outside of the equity raise commentary, the other key callback takeaway is that the 49-50% Azure guide assumes continued efficiency gains but not a repeat of F1Q's revenue-per-token benefit. Mgmt tied that benefit to premium model launches, OpenAI's in particular, and doesn't expect it in Q2. It listed the H2 swing factors as supply timing, first-party prioritization, efficiency, deployment timing and tougher compares, and said at least ~$5B of capacity spend shifted into H2. Bulls will read that

as a guide with cushion; bears read the swing-factor list as a setup for an H2 Azure decel.

除了股权融资的评论外，另一个关键的电话会议要点是，49-50%的 Azure 指引假设了持续的效率提升，但不假设第一财季每 token 收入的收益会重现。管理层将这一收益与高端模型发布（尤其是 OpenAI 的模型）联系在一起，并预计第二季度不会出现。它将下半年的波动因素列为供应时间、第一方优先级、效率、部署时间以及更严峻的同比基数，并表示至少有~$5B 的产能支出转移到了下半年。看涨者会将其解读为留有缓冲的指引；看跌者则会将这一波动因素清单视为下半年 Azure 减速的前兆。

Buyside numbers still around $25/$28+ for CY27/CY28 and bulls will say throw a 30x multiple on what is one of the cleanest Megacaps, and you get to $750+. Overall we thought this was a solid print.

对于 2027/2028 财年而言，该公司的估值仍在 25 美元至 28 美元左右。看好该股的人认为，鉴于这是一家状况极佳的巨头企业，若以 30 倍的市盈率来计算，其股价有望超过 750 美元。总体来说，我们认为这一估值相当合理。

Bull vs. Bear Debate 牛市与熊市之争

The bull thesis is that MSFT is the enterprise AI platform, and this quarter showed both engines accelerating at once at a ~$370B revenue run-rate. Azure plus Foundry is becoming the control plane where enterprises build and govern agents across any model (OpenAI, Anthropic, open-weight, MAI). M365 is moving from per-seat subscriptions to seats plus consumption via E7, Copilot credits and GitHub-style usage billing. Bulls think the moat is durable: the identity, data, security and governance layers (Entra, Work IQ and Fabric, Purview, Agent 365) sit where enterprise data already lives. That matters more as buyers move past the “shiny object stuff” to owning their weights, managing costs and reliability. Add the structural cost levers (Maia and Cobalt silicon, MAI models within 3-6 months of the frontier, rights to OpenAI’s model IP without paying rent on it, a fungible fleet), a AAA balance sheet, and capacity discipline: Satya won’t chase a few big buyers unless the pricing is right.

微软的看涨逻辑是，它是企业级 AI 平台，而本季度显示两大引擎同时在 ~$3700 亿美元营收规模上加速。Azure 加上 Foundry 正在成为控制平面，企业可在此跨任何模型（OpenAI、Anthropic、开放权重模型、MAI）构建和治理智能体。M365 正从按席位订阅转向席位加消费，通过 E7、Copilot 积分和 GitHub 式用量计费实现。看涨者认为护城河持久：身份、数据、安全和治理层（Entra、Work IQ 和 Fabric、Purview、Agent 365）正好位于企业数据已经所在之处。这一点尤为重要，因为买家们已经不再只关注那些外观华丽的产品，而是更注重产品的实际性能、成本控制以及可靠性。再加上各种成本优化措施（如使用 Maia 和 Cobalt 硅材料、在 3 到 6 个月内推出新一代 MAI 模型、无需支付费用即可使用 OpenAI 的模型知识产权、以及可互换的硬件架构），再加上强大的财务实力和严格的成本管控机制，萨蒂亚不会去追求那些大客户，除非价格合适。

This quarter gave bulls their best evidence yet that the AI spend is earning a return. Azure accelerated 6pts and guided higher while third-party capacity slipped, so the growth came from getting more out of the existing fleet. Mgmt said “each dollar of CapEx has the potential to support more revenue and higher returns over time.” The rest of the print points the same way: OM near 50%, FCF of $18.6B vs. ~$8.5B Street, RPO flat when Street expected a decline, M365 commercial cloud accelerating with a ~19% guide, Copilot daily users up ~50% q/q and usage-billing customers up 75%+ q/q. The share-loss bear case is hard to make with Azure at 48% on a ~$133B run-rate.

本季度为多头提供了迄今最有力的证据，证明 AI 支出正在产生回报。Azure 加速 6 个百分点并给出更高指引，而第三方产能下滑，因此增长来自从现有算力中榨取更多产出。管理层表示“每一美元资本支出都有潜力随时间推移支撑更多收入和更高回报。”财报其余部分也指向同一方向：营业利润率接近 50%，自由现金流 186 亿美元，而 Street 预期为 85 亿美元；RPO 持平，而 Street 预期下降；M365 商业云加速增长，指引为 19%；Copilot 日活用户环比增长 50%，按使用量计费客户环比增长 75%以上。在 Azure 以 48%的增速、1330 亿美元年化收入运行率的情况下，份额流失的看空逻辑很难成立。

The bear thesis is that MSFT is turning from an asset-light software compounder into a capital-intensive infrastructure business, and this quarter made the bill more visible:

看跌观点认为，微软正在从一家轻资产型的软件公司转变为资本密集型的基础设施企业，而本季度的业绩则进一步印证了这一趋势。

- capex incl. leases ran at ~49% of revenue, and cash PP&E at ~43% (vs. 25% a year ago);

包括租赁费用在内的资本支出占营收的 1001#49%，而现金形式的固定资产则占营收的 1002#43%（而去年同期这一比例为 25%）。

- FCF fell 27% y/y, and capex exceeded net income by ~$8.6B;

自由现金流同比下降 27%，资本支出比净利润多出 86 亿美元；

- cash and short-term investments fell to $64.5B;

现金及短期投资降至 645 亿美元；

- signed but uncommenced data center leases climbed to $364.6B;

已签署但尚未动工的数据中心租赁合同总额高达 3646 亿美元；

- the CFO now says MSFT will access additional sources of funding when it judges that attractive.

首席财务官表示，当微软认为有必要时，会寻求其他融资渠道。

The returns on that capital lean on things MSFT doesn’t control. OpenAI is now ~11% of revenue vs. ~7% in FY26, and it’s a loss-making counterparty diversifying to TPUs, ORCL and AWS. Token pricing is set by frontier-model launches. Neocloud capacity just slipped. Meanwhile the old franchise is under pressure: M365 seat growth slowed to 5% with weaker E3 and standalone execution, the Copilot seat count went missing, Industry Solutions customers are taking longer on CRM and HCM decisions while they rethink workflows around AI, and Windows OEM & Devices is guided down mid-30s.

这些资本的回报依赖于微软无法控制的因素。OpenAI 现在占收入的~11%，而 FY26 为~7%，而且它是一个亏损的交易对手，正在向 TPU、ORCL 和 AWS 多元化。代币定价由前沿模型发布决定。Neocloud 产能刚刚下滑。与此同时，旧有业务正面临压力：M365 席位增长放缓至 5%，E3 和独立执行表现较弱，Copilot 席位数量消失不见，Industry Solutions 客户在围绕 AI 重新思考工作流程时，对 CRM 和 HCM 决策耗时更长，而 Windows OEM 与设备业务指引为下降 30%左右。

Bears say the bull case assumes too much durability. Mgmt itself said the 49-50% guide needs efficiency gains not yet found and excludes the token-pricing tailwind that helped F1Q. It also said H2 laps “a strong prior-year comparable.” The implied Azure dollar add shrinks to ~$2.8-3.0B from $3.75B. Even with implied OI above Street, the F2Q guide only gets to in-line EPS (~$4.82 vs. $4.84), because finance-lease

interest pushes OI&E to roughly -$300M. That's a cost line that grows with every lease that commences. Microsoft Cloud GM is heading to ~65%, the exit offer isn't the margin lever some modeled, and the FY27 OM framework wasn't repeated. M365 consumption, the bulls' next leg, is a "slower move" by mgmt's own account. With depreciation from $220B+ of FY27 capex weighing on gross margin, OM slips to ~45%, or ~$192B of operating income. After ~-$2.5B of OI&E (more lease and debt interest), a 20% tax rate and ~7.43B shares, CY27 EPS is ~$20-21, ~7% below Street.

空头认为多头的论点假设了过多的持久性。管理层自己表示，49-50%的指引需要尚未实现的效率提升，并且排除了曾帮助第一财季的代币定价顺风。管理层还表示，下半年将面临"强劲的去年同期可比基数"。隐含的 Azure 美元增量从 37.5 亿美元缩减至约 28-30 亿美元。即使隐含的营业利润高于华尔街预期，第二财季指引也只能达到与预期一致的每股收益（约 4.82 美元 vs. 4.84 美元），因为融资租赁利息将营业外收支推至大约-3 亿美元。这是一条随着每笔租赁开始而增长的成本线。微软云业务总经理正前往~65%，退出报价并非一些人模型中的利润率杠杆，且 FY27 OM 框架未被重复。M365 消费——多头的下一段行情——按管理层自己的说法是"较慢的推进"。随着 FY27 超过 2200 亿美元资本支出带来的折旧拖累毛利率，OM 降至~45%，即~1920 亿美元营业收入。在~-25 亿美元 OI&E（更多租赁和债务利息）、20%税率及~74.3 亿股之后，CY27 每股收益为~20-21 美元，~7%低于市场水平。

At 22x, closer to GOOGL's ~20x forward and other capital-intensive peers because a ~1% FCF yield offers no support, that implies ~$450, or ~17% downside from $540.

其估值为 22 倍，这一数值更接近谷歌 1001#20 倍的预期估值，也与其他资本密集型企业相当；由于 1002#1%的自由现金流收益率无法作为支撑，这意味着该公司的股价可能会从 540 美元下跌至 450 美元，跌幅约为 17%。

Some bearish feedback in Slcak:

Slcak 中有一些看跌的反馈：

"Lower capex could mean slower Q2/Q3 Azure" | "Q2, we have the efficiency gains, we need to find more to meet the guidance... some supply in Q2 moving out to H2" | "Is the flipside on the good token pricing that open weight adoption might hurt their growth?" | "They've added DC delays to their risk factors this quarter" | "New bear case is that we can't spend capex fast enough"

“较低的资本支出可能导致 Azure 在第二季度和第三季度的增长放缓”/“在第二季度，我们已经实现了效率提升，但仍需采取更多措施来达成预期目标……部分供应任务将从第二季度推迟到下半年”/“良好的代币价格所带来的负面影响是，更广泛的采用可能会阻碍其发展吗？”/“他们在本季度将数据中心建设延迟列为了风险因素之一”/“另一种悲观观点是，我们无法快速投入足够的资本支出。”

NOW -18% AH: Not good. Subs in line with Street and short of the ~$4.01–4.03B bogeys, cRPO of 21% cc below the ~21.5–22% bar, and a 4Q cRPO guide of 18.5% cc that sits under both Street (19%) and the ~19.5–20% bulls wanted. EBIT margin guide worse.

目前为-18%。表现不佳：营收与市场预期相当，但低于 1001#$4.01–4.03 十亿美元的预期目标；cRPO 为 21%，也低于 1002#21.5–22%的预期水平。此外，第四季度的 cRPO 预期为 18.5%，同样低于市场预期的 19%以及 1003#19.5–20%的预期值。EBIT 利润率预期也更差。

Overall just an ugly print and there wasn’t much defending of the name in my conversations. There were a lot of nascent bulls in the name over the last month, although positioning shifted more even the last few days after Bernstein called out some of the cRPO headwinds in a note.

总体来说，这种表现实在糟糕，而且在讨论中也没有人能够为这个名称辩护。上个月时有不少看多该名称的投资者，但自从伯恩斯坦在报告中指出了一些影响 cRPO 发展的负面因素后，就连最近几天，市场的立场也发生了变化。

Bears got plenty of fuel : beat sizes halving vs. 2Q, organic cRPO heading to ~16.75%, and an ~18% FY27 sub growth starting point. Mgmt now calls cRPO “very nuanced,” and that having to bundle services to get AI live shows AI isn’t yet adding to total growth. GM keeps sliding toward the ~80% sub GM trough and ebit guide was worse. Bulls will say the 4Q cRPO guide is mostly optics: early renewals pulled into 3Q, ~75bps of T4C/on-prem items that still convert to revenue, and Moveworks lapping. They see the FDE carve-out as a temporary trade of ~1pt of FY27 sub growth for faster consumption that comes back at renewal.

空头有充足弹药：账单规模较二季度减半，有机 cRPO 趋向~16.75%，以及~18%的 27 财年订阅增长起点。管理层现在称 cRPO“非常微妙”，并且为了上线 AI 而不得不捆绑服务，这表明 AI 尚未带来总增长。毛利率持续下滑，逼近~80%的订阅毛利率低谷，息税前利润指引也更差。多头会说，四季度 cRPO 指引主要是表面现象：提前续约被拉入三季度、~75 个基点的 T4C/本地部署项目仍会转化为收入，以及 Moveworks 的同比基数效应。他们认为 FDE 分拆是以~1 个百分点的 27 财年订阅增长换取更快消费的临时交易，而后者会在续约时回归。

Details:

- **3Q Subscription Revenue:** $3.988B, +21% y/y / +20.5% cc (last q +24.5% / +23% cc) vs. Street ~$3.98B; buyside ~$4.00-4.04B (~21-22% cc)

  第三季度的订阅业务收入为 39.88 亿美元，同比增长 21%，环比增长 20.5%（上一季度的同比增幅为 24.5%，环比增幅为 23%）。市场预期为 39.8 亿美元；而一些分析师则预计该数值在 40.0 亿至 4.04 亿美元之间，环比增幅约为 21%至 22%。

- **3Q cRPO:** $13.65B, +21% cc (last q +21.5% cc) vs. Street ~$13.57B (~20% cc); buyside ~$13.70B (~21.5-22% cc)

  第三季度的 cRPO 值为 136.5 亿美元，环比增长 21%（上一季度的环比增长率为 21.5%）；而市场预期为 1001 美元，即 135.7 亿美元，环比增长约 20%；机构预测值为 1002 美元，即 137.0 亿美元，环比增长约 21.5%-22%。

- **Non-GAAP OM:** 32.6% vs. Street ~31.2% (guide 31%)

  非 GAAP 运营利润率：32.6%，而市场预期为 1001#31.2%（预期值为 31%）

- **4Q cRPO Guide:** +18.5% cc vs. Street ~19.4-19.8%; buyside ~20-21%

  第四季度 cRPO 预测：相比市场平均预期上涨 18.5%，其中买入方预期为 1002#20-21%，卖出方预期为 1001#19.4-19.8%。

- **4Q Non-GAAP OM Guide:** ~32% vs. Street ~33.3-33.6%

  第四季度非 GAAP 运营利润指引：1001#32%，而市场预期为 1002#33.3%-33.6%

- **FY subs** goes to $15.78–15.79B from $15.76–15.78B, a $15M raise at the midpoint

vs. a ~$10M 3Q beat over the guide midpoint ($3.9775B). That passes through the full beat but lands below the ~$15.80–15.83B bulls wanted. The new FY implies ~$4.25B of 4Q subs, the 4Q guide midpoint.

全年的订阅收入从 157.6 亿至 157.8 亿美元上升至 157.8 亿至 157.9 亿美元，增幅为 1500 万美元。这一数值虽然高于预期值 39.775 亿美元，但仍低于市场预期的 158.0 亿至 158.3 亿美元。根据这一新预测，第四季度的订阅收入将为 42.5 亿美元，这也正好是该季度的预期值。

Key Takeaways:

- **Guide.** 4Q cRPO of +18.5% cc (18.5% reported) is a ~250bps step down from 3Q's 21%. It is below Street (~19.4-19.8%) and below buyside bogeys of ~20-21%, which had already been trimmed 0.5-1pt into the print. It is also below the ~50bps step-down (~19.5%) mgmt had soft-guided. Excluding the ~175bps from Armis, organic is ~16.75%, with Moveworks also lapping in 4Q. Mgmt's bridge:

  指引。第四季度 cRPO 按固定汇率计算增长 18.5%（报告值 18.5%），较第三季度的 21%下降约 250 个基点。这低于华尔街预期（约 19.4-19.8%），也低于买方约 20-21%的预期门槛，而后者在财报发布前已被下调 0.5-1 个百分点。这也低于管理层此前软性指引的约 50 个基点降幅（约 19.5%）。剔除 Armis 带来的约 175 个基点后，有机增长约为 16.75%，同时 Moveworks 也在第四季度进入同比基数。管理层的桥接：

  - early renewals that drove ~half the 3Q beat came out of 4Q

    推动第三季度业绩超出预期的一大半的提前续订业务，其实来自第四季度。

  - a higher Federal on-prem mix costs ~25bps

    更高的联邦本地部署组合成本，为 1001#25bps

  - ~50bps of T4C backlog growth is excluded (vs. ~25bps in 3Q)

    ~T4C 的积压增长速度为 50bps，这一数值未被计入（而第三季度为 ~25bps）。

  - the services carve-out takes a bit more

    服务领域的划分需要更多些时间。

  The callback called this a "75bps minimum" headwind. Even normalized to ~19-19.25%, the guide sits below Street and the lowest bogeys, and few on the

buyside gave credit for the adjustments. The 4Q sub rev guide ($4.245-4.255B, +21.5% cc) was in line with Street and bogeys, though it leans on ~100bps of FX while absorbing the 50bps carve-out. The 32% OM guide (~75bps of Armis dilution) is ~150bps below Street.

财报电话会议将此称为“至少 75 个基点”的逆风。即便按~19-19.25%的汇率正常化调整，该指引仍低于华尔街预期和最低目标，而且买方很少有人认可这些调整。第四季度订阅收入指引（42.45-42.55 亿美元，按固定汇率计算增长 21.5%）与华尔街预期和目标一致，不过它依赖~100 个基点的汇率利好，同时还要消化 50 个基点的剥离影响。32%的营业利润率指引（约 75 个基点的 Armis 摊薄影响）比华尔街预期低~150 个基点。

- **cRPO.** The new development is mgmt playing down its own favorite KPI. T4C exclusions were quantified for the first time because they are now material. They are mostly contracts inherited through Armis; partners absorb T4C today, but direct Federal contracting would widen the gap. Early renewals keep swinging the print (~50bps in 3Q vs. ~100bps in 2Q) and are hard to predict, and the carve-out also pulls some value out of cRPO (<25bps). Mgmt called cRPO “very nuanced” and “certainly not perfect.” On the callback it pushed investors toward FY27 revenue growth instead, so cRPO will now need adjusting every quarter.

cRPO。新的进展是，管理层在淡化自己最喜欢的 KPI。T4C 排除项首次被量化，因为它们现在已具有重要性。这些主要是通过 Armis 继承的合同；目前合作伙伴吸收了 T4C，但直接与联邦政府签约会扩大这一差距。提前续约持续左右着数据表现（第三季度约 50 个基点，而第二季度为~100 个基点），且难以预测，而剥离业务也从 cRPO 中抽走了一部分价值（<25 个基点）。管理层称 cRPO“非常微妙”且“肯定不完美”。在电话回访中，它转而将投资者引向 2027 财年的收入增长，因此 cRPO 现在将需要每季度进行调整。

- **Services.** New this quarter: NOW is bundling FDE-style deployment work into select large AI deals. Under ASC 606 that value is carved out of subscription into PS, though customers pay the same total contract value. The cost to sub growth is ~25bps in 3Q, ~50bps in 4Q and an early-estimate ~100bps in FY27. The value flows back into subscription at renewal, ~2-3 years out.

服务。本季度新增：NOW 正在将 FDE 风格的部署工作打包进部分大型 AI 交易中。根据 ASC 606，该价值从订阅收入中剥离至专业服务收入，尽管客户支付的总合同价值不变。对订阅增长的成本影响为：第三季度~25 个基点，第四季度~50 个基点，以及初步估计 2027 财年~100 个基点。该价值将在续约时回流至订阅收入，大约~2 至 3 年后。

- Supported customers adopt AI 2x faster in the first five weeks, with “multiples higher” Assist consumption.

  采用该服务的客户在最初五周内采用人工智能技术的速度快两倍，其相关服务的使用频率也“高出数倍”。

- Partners still handle ~95% of implementations, and mgmt says the program is temporary.

  目前仍有合作伙伴负责 1001#95%的实施工作，管理层表示该计划只是暂时的。

- But mgmt is also “building in more of these deployment teams” into its forecast, and PS now runs at a ~20% gross loss.

  不过管理层也在其预测中“增加了更多此类部署团队的数量”，目前 PS 的毛亏损率为 1001#20%。

- **Callback.** The key point: mgmt framed ~18% as the FY27 sub growth starting point, vs. Street ~18.7-18.9% going in. The math is 4Q cRPO of 18.5%, plus ~50bps of T4C that still hits revenue, minus ~100bps for the carve-out. Some on the buyside already at sub 18 and the formal guide comes in January. Other callback points:

  电话会议。关键点：管理层将~18%框定为 FY27 订阅增长的起点，而卖方此前预期为~18.7-18.9%。计算逻辑是：第四季度 cRPO 为 18.5%，加上~50 个基点的 T4C 仍会计入收入，再减去~100 个基点的剥离影响。部分买方已经预期低于 18%，正式指引将在 1 月发布。其他电话会议要点：

  - sub rev seasonality similar to 2026

    季节性变化与 2026 年类似

  - a 50-70bps seasonal step-down in cRPO from 4Q to 1Q is reasonable

    从第四季度到第一季度，cRPO 出现 50-70bps 的季节性下降是合理的。

  - the ~100bps OM expansion commitment is intact, with ~80% as the sub GM trough

    ~100bps 的 OM 扩展承诺依然有效，其中~80%为子 GM 的最低值。

  - 3Q interest expense is a good proxy for 4Q

    第三季度的利息支出可以很好地作为预测第四季度的参考。

- half the 3Q cRPO upside came from NNACV, and bookings beat the internal plan

  第三季度 cRPO 增长的半数源自 NNACV，而且预订量也超出了内部预期。

- Armis tracked its raised plan with no extra upside

  阿米斯按照既定计划行事，没有采取任何额外的行动。

- the consumption flywheel should become material within ~12 months, with FY27 upside if it ramps faster

  消费领域的飞轮效应应在 1001#12 个月内显现；如果其发展速度更快，2027 财年有望取得更好业绩。

Sell-side FY27 EPS is moving to ~$4.70-4.80 from ~$5.00 on margins and interest.

由于利润率及利息支出的变化，卖方预计 2027 财年的每股收益将从 1002 美元的 5.00 美元降至 1001 美元的 4.70-4.80 美元。

- **Beat cadence.** Every top-line beat roughly halved vs. 2Q:

  节奏有所放缓。与第二季度相比，每条主要业务线的增长速度大约下降了一半：

- cRPO ~100bps (vs. ~200bps), or ~50bps excluding early renewals

  cRPO 为~100bps（相比~200bps）；若不考虑提前续订的情况，则为~50bps。

- sub rev ~50bps above the high end (vs. ~150bps, half of which was an on-prem pull-forward)

  高于上限 1001#50bps（而~150bps 中有一半是本地前置处理带来的数值）

- OM ~150bps (vs. ~300bps) **OM ~150bps（对比 ~300bps）**

Only ~$3M of the cc sub beat flowed to the FY guide; the $15M raise includes ~$12M of FX, and mgmt blamed the carve-out for the gap. The tone shifted too: after framing past guides as deliberately prudent, mgmt called the ~50bps underlying cRPO beat strong for NOW's scale.

在年度预测中，只有~$3M 的信贷业务表现优于预期；而 1500 万美元的增幅中，有~$12M 来自外汇业务。管理层将这一差距归因于上述业务被单独计算在外。此外，管理层的态度也发生了变化：此前他们还将以往的预测描述为出于谨慎考虑而做出的，但现在则认为，就 NOW 目前的规模而言，~50bps 的信贷业务表现已经相当不错了。

- **AI.** The scorecard improved again:

AI。评分卡再次有所提升：

  - AI NNACV +65% y/y **AI NNACV 同比增长 65%**
  - year-end AI ACV target raised a second time, to $1.7B+ (from $1B at the start of the year and $1.5B at the May analyst day)

    年末的 AI 平均每用户价值目标再次上调，现为 17 亿美元以上（年初时为 10 亿美元，5 月的分析师会议上则为 15 亿美元）。

  - $1M+ AI deals 4.5x; deals with 5+ AI products 8.5x (vs. 5.5x previously)

    涉及 100 万美元以上金额的 AI 相关交易，其收益倍数为 4.5 倍；而涉及 5 种及以上 AI 产品的交易，其收益倍数则为 8.5 倍（此前这一数值为 5.5 倍）。

  - agentic consumption in production 13x YTD and accelerating each quarter

    生产领域的代理型消费额迄今已达到 13 倍去年同期水平，且每季度都在加速增长。

  - Control Tower NNACV 6x+ **控制塔 NNACV 6x+**
  - EmployeeWorks, the Moveworks front door, at $100M ACV in under three quarters

    EmployeeWorks 作为 Moveworks 的入口平台，其在不到三个季度内的企业价值就已达到 1 亿美元。

  - CRM AI NNACV tripled q/q and y/y

    CRM、AI、NNACV 的环比及同比增幅均达三倍

The catch is that most consumption still sits inside initial entitlements sold with a ~30% price uplift. So usage is running ahead of incremental revenue, and customers going over their entitlements are still a small, if fast-growing, group. Asked when AI shows up in total growth, mgmt pointed to 2027 for “the true

acceleration" and reiterated AI at ~30% of ACV by 2030.

问题在于，大部分消费仍发生在最初销售的配额范围内，这些产品的价格则上浮了 1001#30%。因此，使用量的增长速度超过了新增收入的增长速度；而那些超出配额使用的客户群体虽然规模较小，但仍在不断增长。当被问及人工智能何时才能真正推动整体业务增长时，管理层表示"真正的加速"将会出现在 2027 年，并称到 2030 年时，人工智能带来的收益将占总营收的 1002#30%。

- **Pricing.** New AI-native packaging is landing at 20-30% uplifts with no discounting, and >40% of customers migrating to the new tiers move up a tier. Mgmt pitched up to a 5x lift in revenue per user once customers are live and "token economics" kick in. It said customers are not asking for outcome-based pricing, so the hybrid seat-plus-consumption model stays.

定价方面，全新的基于人工智能的包装方案能带来 20-30%的溢价，且无需任何折扣；在采用新方案的客户中，有超过 40%的人会选择更高级别的套餐。管理层预计，一旦客户开始使用该方案且"代币经济机制"开始发挥作用，每用户的收入有望提升 5 倍。此外，由于客户并未要求按实际效果来定价，因此仍会采用"固定席位加消费量"的混合定价模式。

- **Headless.** The biggest strategic shift: NOW is openly charging for headless access. Action Fabric opens NOW workflows to third-party front ends via MCP/A2A. That now includes a ChatGPT plugin under the expanded OpenAI partnership and deeper GOOGL Gemini Enterprise integration. Every action burns Assists, and Action Fabric assists grew 500% m/m. On the callback, mgmt said:

无头模式。最大的战略转变在于：NOW 现在开始对无头访问模式收取费用。Action Fabric 通过 MCP/A2A 技术，允许第三方前端应用使用 NOW 的工作流功能。在与 OpenAI 的合作伙伴关系不断深化的背景下，NOW 现已支持 ChatGPT 插件，同时与 GOOGL 的 Gemini Enterprise 系统的集成也更加紧密。每执行一项操作都会消耗"Assists"资源，而 Action Fabric 相关的"Assists"消耗量则实现了 500%的月度增长。对此，管理层表示：

  - assists are now fungible across platforms

    现在，辅助功能在不同平台之间可以互通。

  - consumption is moving into comp plans

    消费正转向综合计划。

  - the flywheel should need less new sales capacity

飞轮应该不需要那么多的新增销售能力。

This is a more open stance than prior quarters' focus on owning the front door. It is the most direct answer yet to the bear case that the AI labs' front ends cut SaaS out.

与此前那些试图掌控市场主导地位的策略相比，这种态度更为开放。这是对“人工智能实验室的开发工具会取代 SaaS 服务”这一负面观点最直接的回应。

- **Seats.** Seat counts grew double digits y/y and accelerated vs. last year, even as customers moved to AI SKUs. Mgmt sees no seat compression, and non-seat SKUs are also growing. This is the clearest data point this quarter against AI cannibalizing seats.

座椅数量方面，与去年同期相比实现了两位数的增长，且增速还高于去年，尽管客户们开始转向购买 AI 相关产品。管理层认为座椅数量不会减少，而非座椅类产品的销量也在上升。这是本季度最有力的证据，说明 AI 产品并未对座椅产品的销售造成冲击。

- **Security.** Security & Risk was in 16 of the top 20 deals (13 over $1M), and Security & Risk AI NNACV grew >4.5x. Mgmt's claim that security could be bigger in a few years than all of NOW today drew skepticism on the call.

安全领域。在排名前 20 的项目中，有 16 项与安全及风险相关（其中 13 项的价值超过 100 万美元），而与安全及风险相关的 AI NNACV 业务增速则超过了 4.5 倍。管理层声称，几年后安全领域的规模可能会超过目前所有领域的总和，但这一观点在电话会议中遭到了质疑。

- **Demand.** Mgmt cited widespread demand and pipelines growing “extremely well,” with no macro caution. It did not quantify 2027 IT budgets and made no comment on tariffs. Federal had an outstanding seasonal 3Q ($1M+ deals +30% y/y; Federal CRM 6x), and Federal NNACV should accelerate in 4Q, which is what drives the on-prem mix. Large deals held up: 19 deals over $5M NNACV (+135% y/y); 680 $5M+ customers (+23%, average ACV ~$15.4M); 31 new $20M+ customers; 19 of the top 20 deals with 6+ products; 98% renewal rate.

需求。管理层提到需求广泛，销售管道增长“极其良好”，没有宏观方面的担忧。公司没有量化 2027 年 IT 预算，也没有对关税发表评论。联邦业务第三季度季节性表现突出（100 万美元以上的交易同比增长 30%；联邦 CRM 增长 6 倍），联邦 NNACV 预计在第四季度加速，而这正是推动本地部署组合的因素。大额交易保持强劲：19 笔 NNACV 超过 500 万美元的交易（同比增长 135%）；680 个 500 万美元以上的客户（增长 23%，平均 ACV 为 1001#1540 万美元）；31 个新的 2000 万美元以上客户；前 20 大交易中有 19 笔涉及 6 种以上产品；续约率 98%。

- **Margins.** OM of 32.6% beat on opex, +14% y/y vs. Street ~+21%. Headcount fell ~5% q/q to 28,855, with cuts in sales ops, support and R&D overhead, while quota-bearing heads grew double digits. Internal AI now yields >$1B of annualized value, more than double the 2025 exit rate. Gross margin went the other way: GM of 77.3% (-360bps y/y) and sub GM of 80.2% (-300bps) missed on hyperscaler migrations, data center/AI investment and M&A. Mgmt reiterated ~80% as the trough but gave no timing on recovery. The 4Q OM guide of 32%, ~150bps below Street, matters more for estimates.

利润率。32.6%的运营利润率超预期，得益于运营支出，同比增长 14%，而华尔街预期为 1001#+21%。员工人数环比下降 1002#5%至 28,855 人，裁减集中在销售运营、支持和研发管理费用，而承担配额的人头则实现两位数增长。内部 AI 现在每年产生超过 10 亿美元的价值，是 2025 年退出率的两倍多。毛利率则走向相反：毛利率为 77.3%（同比下降 360 个基点），订阅毛利率为 80.2%（同比下降 300 个基点），因超大规模云厂商迁移、数据中心/AI 投资和并购而未达预期。管理层重申 1003#80%为谷底，但未给出复苏时间。第四季度运营利润率指引为 32%，比华尔街预期低 1004#150 个基点，这对盈利预测更为重要。

Bull vs. Bear Debate 牛市与熊市之争

The bull thesis is that NOW is the layer where work actually gets done in enterprise AI. Agents need context (the CMDB, Workflow Data Fabric and 20+ years of operational data), permissions, and a governed place to execute work. NOW owns that layer inside most of the Global 2000. It has a 98% renewal rate, 680 customers above $5M of ACV growing 23%, and 19 of its top 20 deals spanning six or more products. Bulls see several compounding drivers:

看涨观点认为，NOW 才是企业 AI 中真正完成工作的那一层。智能体需要上下文（CMDB、Workflow Data Fabric 以及 20 多年的运营数据）、权限，以及一个有治理保障的执行工作场所。NOW 在大多数全球 2000 强企业内部拥有这一层。它的续约率达到 98%，年合同价值超过 500 万美元的客户有 680 家，且增长 23%，前 20 大交易中有 19 笔横跨六个或更多产品。看涨者看到了几个复合驱动因素：

- AI-native SKU upgrades priced at a 20-30% uplift

  针对原生 AI 产品的 SKU 升级，其价格会上涨 20-30%

- Assist consumption once customers blow through entitlements (mgmt talks about up to 5x revenue per user)

  在客户用完其额度后提供消费支持（管理层称，每位用户可带来高达 5 倍的营收）

- the Control Tower as the governance layer for first- and third-party agents

  控制塔作为第一方及第三方代理的治理层

- a security franchise that now spans asset discovery (Armis), identity (Veza) and SecOps, with the CISO as a second buyer

  这是一家涵盖资产识别（Armis）、身份管理（Veza）以及安全运营领域的安全服务公司，其客户群体中还包括首席信息安全官。

- CRM rip-and-replace **CRM 更换式升级**
- Flow as a new down-market entry point

  流量作为进入下沉市场的新途径

The model is also unusually capital-light for an AI beneficiary: capex around 3% of revenue, a 36% FCF margin, and >$1B of internal AI savings that fund growth investment while OM still expands ~100bps a year.

作为一家受益于人工智能技术的企业，该公司的资本投入也异常低：资本支出仅占营收的 3%，自由现金流比率高达 36%，此外还有超过 10 亿美元的可用于投资发展的内部人工智能相关收益；同时，其运营规模仍以每年 1001#100 个基点的速度持续增长。

This quarter gave bulls more evidence on adoption: AI NNACV +65%, a second AI

ACV raise to $1.7B+, consumption 13x and accelerating, Action Fabric assists +500% m/m. Double-digit, accelerating seat growth runs counter to the seat-compression thesis. Bulls will argue the 4Q cRPO guide is mostly accounting: ~75bps of T4C/on-prem items still convert to revenue, early renewals simply moved growth into 3Q, and Moveworks laps. Organic 4Q subscription growth actually improves to ~19.75% from ~18.75% despite a bigger carve-out. The FDE carve-out is a deliberate trade: supported customers adopt twice as fast with multiples higher consumption, and the carved-out value flips back into subscription at renewal. That builds in a 2028-29 tailwind just as consumption beyond entitlements scales.

本季度为多头提供了更多采用方面的证据：AI NNACV +65%，AI ACV 第二次上调至 17 亿美元以上，消费量达 13 倍且仍在加速，Action Fabric 协助量环比 +500%。席位增长达到两位数且不断加速，这与席位压缩论调相悖。多头会认为，第四季度 cRPO 指引主要是会计处理问题：~75 个基点的 T4C/本地部署项目仍会转化为收入，提前续约只是将增长转移到了第三季度，以及 Moveworks 的同比基数效应。尽管剥离规模更大，第四季度有机订阅增长实际上从 ~18.75%提升至~19.75%。FDE 剥离是一项刻意的权衡：获得支持的客户采用速度快一倍，消费量高出数倍，而剥离的价值在续约时会重新回到订阅收入中。这在消费量超出授权额度开始规模化之际，为 2028-29 年埋下了顺风因素。

The bear thesis is that AI is moving value away from seat-based workflow apps faster than NOW can charge for it. AI-native service desks, the labs' enterprise agents and hyperscaler agent platforms can sit in front of the system of record, and internal builds get easier every model cycle. Even if NOW keeps the data and workflow layer, pricing power moves to whoever owns the user. NOW's AI numbers are real but small: a $1.7B ACV target against a ~$16B subscription base, much of it upgrade uplift on existing seats. And total growth has slowed through the AI ramp. Organic cRPO goes from ~18.5-19% to ~16.75% in 4Q, while AI-exposed data/infra names (SNOW, DDOG) accelerated toward ~40% at $4-6B of revenue. Structurally, the model is getting more complex and lower quality:

看空论点是，AI 正在以快于 NOW 收费能力的速度，将价值从基于席位的工单应用转移出去。AI 原生服务台、实验室的企业智能体以及超大规模云厂商的智能体平台，可以卡在记录系统之前，而内部自建每个模型周期都变得更简单。即便 NOW 保住了数据和工作流层，定价权也会转移到拥有用户的一方。NOW 的 AI 数字是真实的，但规模很小：在~$160 亿订阅基数之上，AI 年度合同价值目标为$17 亿，其中很大一部分来自现有席位的升级提价。而且，在 AI 推进过程中，总增长已经放缓。有机 cRPO 从~18.5-19%降至第四季度的~16.75%，而受 AI 影响的数据/基础设施类公司（SNOW、DDOG）在$40-60 亿收入规模上加速至~40%。从结构上看，模型正变得更复杂、质量更低：

- sub GM has slid ~470bps since 2024 toward an ~80% “trough”

  自 2024 年以来，sub GM 已下降 1001#470bps，正朝着 1002#80%的“最低点”逼近。

- PS now runs at a gross loss

  目前 PS 处于严重亏损状态。

- growth leans on M&A (Moveworks, Armis, Veza, Logik.ai, Sweep), which brings T4C contracts and net debt

  增长依赖于并购活动（Moveworks、Armis、Veza、Logik.ai、Sweep），这些并购为 T4C 带来了合同业务以及净债务。

- EPS growth (~12% in 2026) trails revenue growth (~22%)

  每股收益的增长速度（2026 年约为 12%）低于营收增长速度（约为 22%）。

Bears think the bull case assumes the consumption flywheel arrives on time and at scale. The consumption ramp many expected in 2H26 is now “material within ~12 months,” and the “true acceleration” is pushed to 2027. Yet the callback bridge points to ~18% FY27 subscription growth, a slowdown from ~21% in 2026 and below Street ~18.7-18.9%. The ~100bps carve-out is an “early estimate” while mgmt is doubling down and building more deployment teams into its forecast, so it can get bigger. Needing FDEs to get AI live suggests the product doesn’t deploy itself. This quarter fed that view:

空头认为，多头的论点假设消费飞轮会按时且大规模地到来。许多人原本预期在 2026 年下半年出现的消费加速，如今被表述为“在~12 个月内变得重要”，而“真正的加速”则被推迟到 2027 年。然而，回调桥接指向~18%的 2027 财年订阅增长，较 2026 年的~21%有所放缓，且低于华尔街预期的~18.7-18.9%。~100 个基点的剥离是一项“早期估计”，而管理层正在加倍投入，并在其预测中纳入更多部署团队，因此这一数字可能还会更大。需要前置部署工程师才能让 AI 上线，说明该产品无法自行部署。本季度进一步印证了这一观点：

- beat sizes halved, and only ~$3M of the cc beat passed through

  节拍长度减半，仅有~$3M 的 CC 节拍通过了筛选。

- 4Q OM was guided ~150bps below Street

第四财季的运营利润率预期比市场预期低 1001#150bps。

- GM, FCF and EPS all missed

  毛利率、自由现金流和每股收益均未达标。

- cRPO now needs adjusting every quarter

  现在需要每季度调整 cRPO。

- mgmt's claims that security and Action Fabric could each become bigger than all of NOW today strain credibility

  管理层声称安全业务与 Action Fabric 的未来规模都将超过目前的 NOW 整体规模，这种说法可信度存疑。

If NOW is a high-teens grower with flat-to-down gross margins, the multiple converges toward large-cap software (10-20x FCF). Growth-oriented holders who came in since the July print would exit, and FY27 EPS keeps drifting lower on interest expense and margins.

如果 NOW 目前还处于成长阶段，毛利率处于较低水平，那么其估值倍数就会趋近于那些大型软件公司的水准（自由现金流的 10-20 倍）。那些在 7 月报告发布后买入、注重公司成长的投资者将会选择离场；而由于利息支出及毛利率的持续下降，27 财年的每股收益也会继续走低。

Bears believe CY27 subscription growth lands closer to ~16% (~15.5% organic) as the carve-out headwind grows, T4C exclusions widen and seat-based expansion slows. That takes total revenue to ~$18.8B. With sub GM sliding below the ~80% "trough" and PS running at a loss, FCF margin stalls near 35%, or ~$6.6B of FCF (~7% below Street). On 15x CY27 EV/FCF, in line with large-cap software growing mid-teens, EV is ~$99B (~5x CY27 revenue). That implies <$100 stock.

空头认为，随着剥离带来的逆风加剧、T4C 排除范围扩大以及按席位扩张放缓，CY27 订阅增长更接近~16%（约 15.5%有机增长）。这使总收入达到~$18.8B。随着订阅毛利率跌破~80%的"谷底"，且 PS 业务处于亏损状态，FCF 利润率停滞在 35%附近，即~$6.6B 的 FCF（较华尔街预期低约 7%）。按 15 倍 CY27 EV/FCF 计算，与实现中双位数增长的大盘软件股一致，EV 为~$99B（约为 CY27 收入的 5 倍）。这意味着股价低于$100。

KLAC +3%: The supply catch-up finally shows up in the numbers, with a $4.7B Dec guide above most bogeys and a pledge to outgrow >$200B CY27 WFE; a flat 62.5% GM guide is the nit

KLAC 上涨 3%：供应状况的改善终于体现在数据上，12 月的营收预期为 47 亿美元，远高于市场预期；同时该公司还承诺在 2027 财年的总营收将超过 2000 亿美元。不过，其毛利率预期仅为 62.5%，这一数值有些偏低。

Sep-Q revenue of $4.14B and EPS of $1.22 beat Street ($4.04B / $1.19). The Dec guide of $4.7B / $1.44 is ~4% above Street on both and at the top of the ~$4.6-4.7B buyside range. CY26 WFE moved up to the mid-$150Bs, and CY27 WFE is seen above $200B.

9 月季度营收 41.4 亿美元、每股收益 1.22 美元，均超华尔街预期（40.4 亿美元/1.19 美元）。12 月指引为 47 亿美元/1.44 美元，两项均较华尔街预期高出约 4%，并处于买方 46 亿至 47 亿美元区间的上沿。2026 日历年晶圆制造设备（WFE）预期上调至 1500 亿美元中段，2027 日历年 WFE 预计超过 2000 亿美元。

Bulls happy that the 2H catch-up mgmt promised in July showed up. Sep grew +13% q/q, Dec is guided +14% q/q (vs. LRCX ~+5%), and 2H CY26 is now ~25% above 1H (vs. ~20%). Mgmt now says outright it will outgrow ~30% CY27 WFE growth. Bulls are focused on a guide above most bogeys after a string of ~1-2% raises, a record 46.1% OM, and Rick calling the 2030 model “very conservative”; bulls will say the CY26 share loss was supply, not demand, and is now reversing. Bears will point to a 62.5% GM guide (~50bps under the buyside) on memory-chip costs, a Dec quarter where the systems growth is all memory (F/L ~flat q/q), a China-driven Sep (~95% of the q/q add), and a >$200B CY27 WFE call that only matched LRCX (some buyside models already carry ~$225B).

多头对管理层 7 月承诺的下半年追赶终于在业绩中兑现感到满意。9 月环比增长+13%，12 月指引环比+14%（对比 LRCX ~+5%），而 2026 年下半年目前~比上半年高 25%（对比~20%）。管理层现在直接表示，其增速将超过~2027 日历年 WFE 增长 30%。多头关注的是，在经历了一连串~1-2%的上调之后，这份指引高于大多数预期门槛，营业利润率达到创纪录的 46.1%，且 Rick 称 2030 年模型“非常保守”；多头会说 2026 日历年的份额流失是供应问题，并非需求，如今正在逆转。空头会指出 62.5%的毛利率指引（比买方预期低约 50 个基点）源于存储芯片成本，12 月季度系统增长全部来自存储（F/L ~环比持平），9 月增长由中国驱动（约占环比增量的 95%），以及超过 2000 亿美元的 CY27 WFE 预测仅与 LRCX 持平（部分买方模型已给出~2250 亿美元）。

Key Takeaways

- **Catch-up.** The 2H acceleration mgmt promised is now in the numbers. Sep grew +13% q/q and Dec is guided +14% q/q, vs. LRCX’s ~+5% Dec guide, putting 2H CY26 ~25% above 1H vs. the ~20% July framing. Mgmt pinned the CY26 lag on supply, not share or mix: a year ago it planned for a flat 2026, it “could absolutely have shipped more” all year, and move rates on key components are now “increasing month by month.” Incremental vs. prior: in July mgmt framed CY27 WFE growth as mid-20s, similar to CY26, and in Sept called KLAC’s CY27 growth “similar range, maybe higher”; now it is an explicit commitment to outgrow WFE, and the guide breaks a string of ~1-2% raises vs. Street.

  追赶。管理层此前承诺的下半年加速现已体现在数字中。9 月环比增长+13%，12 月指引环比增长+14%，而 LRCX 的 12 月指引为~+5%，这使得 2026 年下半年较上半年高出~25%，而 7 月的框架为~20%。管理层将 2026 年的滞后归因于供应，而非份额或结构：一年前它计划 2026 年持平，全年“本完全可以出货更多”，关键组件的移动速率现在“逐月上升”。与此前相比：7 月时，管理层预计 27 财年的 WFE 增长幅度将在 20%左右，与 26 财年相当；9 月时则称 KLAC 在 27 财年的增长幅度“仍会在类似水平，甚至可能更高”；而现在，管理层明确表示要实现超过 WFE 的增长速度，而且其给出的增长预期也高于市场普遍预期的 1004#1-2%的水平。

- **Guide.** Dec revenue of $4.7B ± $200M is +43% y/y on an easy +7% comp (2-yr stack ~50pts vs. ~42pts in Sep) and at the top of the ~$4.6-4.7B buyside range (above most), with the low end at Street. The $1.44 EPS guide vs. Street $1.38 implies a 47.4% OM vs. Street ~46.7%. On our math CY26 revenue lands at ~$15.9B (+25%) vs. Street’s $15.6B going in. Mgmt expects “sequential growth for the next several quarters,” with CY27 more linear than CY26’s back-half spike.

指引。12 月营收 47 亿美元±2 亿美元，同比+43%，对比轻松的增长 7%基数（两年堆叠~50 点 vs. 9 月~42 点），且处于~46-47 亿美元买方区间高端（高于多数预期），低端与卖方一致。每股收益指引 1.44 美元 vs. 卖方 1.38 美元，隐含营业利润率 47.4% vs. 卖方~46.7%。按我们的测算，CY26 营收落在~159 亿美元（+25%）vs. 卖方进入时的 156 亿美元。管理层预计"未来几个季度环比增长"，CY27 比 CY26 的下半年激增更为线性。

- **Callback.** The key callback takeaway: opex growth into CY27 runs ~2x the prior $15-20M/qtr framing (~$30-40M+/qtr) on headcount, service/applications comp pressure in Korea and Taiwan, and depreciation from site expansions, with more detail next quarter. Mgmt also stressed that the ~40% memory figure is KLAC's business mix, not WFE, that F/L WFE still grows in CY27, and that the higher memory mix isn't a relative drag given intensity trends. Smaller items: bare wafer inspection orders are starting to emerge (possible CY27 upside), and the new reticle inspection platform ships in ~6-9 months.

电话会议。关键要点：CY27 的运营费用增长约为此前每季度 1500 万至 2000 万美元框架的~2 倍（即每季度 3000 万至 4000 万美元以上），原因是员工人数、韩国和台湾的服务/应用薪酬压力，以及站点扩张带来的折旧，更多细节将在下季度公布。管理层还强调，~40%的存储占比是 KLAC 的业务结构，而非 WFE，F/L WFE 在 CY27 仍将增长，且鉴于强度趋势，更高的存储占比并非相对拖累。较小事项：裸晶圆检测订单开始出现（可能带来 CY27 上行空间），新的掩模版检测平台将在~6 至 9 个月内出货。

- **Mix.** Dec is a memory quarter: memory rises to ~40% of semi process control systems revenue (DRAM ~84%) from 28% in Sep. On our math F/L systems are ~flat (-1%) q/q while DRAM systems add ~$450M (+~55-60%). CY27 is framed at roughly 60/40 F/L/memory vs. ~68/32 in CY26 (one transcript version renders the CY27 comment as memory ~60%; every other read, and the Dec guide, point to ~40%). Historically a memory-heavy WFE mix meant KLAC under-grew peers. Mgmt's counter: HBM specs and greenfield DRAM fabs are pushing DRAM intensity toward leading-edge logic in some products, and its outlook still has F/L WFE growing in CY27 (more 2nm and initial 1.4nm vs. a 3nm-centric 2026).

混合。12 月是一个记忆季度：记忆占半导体过程控制系统收入的~40%（DRAM ~84%），高于 9 月的 28%。根据我们的计算，F/L 系统环比~持平（-1%），而 DRAM 系统增加~4.5 亿美元（约+55-60%）。CY27 大致框定为 60/40 的 F/L/记忆，而 CY26 为~68/32（一份记录版本将 CY27 的评论表述为记忆~60%；其他所有解读以及 12 月指引都指向~40%）。历史上，记忆占比较高的 WFE 组合意味着 KLAC 的增长低于同行。管理层的回应是：HBM 的技术规格以及新建的 DRAM 工厂，正在推动某些产品中的 DRAM 性能向最先进的逻辑芯片水平发展。预计在 2027 年，F/L 和 WFE 领域的需求仍会持续增长，届时将会有更多 2 纳米工艺的产品问世，同时也会出现首批 1.4 纳米工艺的产品；而 2026 年则仍以 3 纳米工艺为主。

- **Margins.** GM of 62.7% (+30bps q/q) was ~20-40bps above Street but ~30bps short of the ~63% buyside bar, and the Dec guide of 62.5% is flat-to-down on ~$560M more revenue, ~50bps below where the buyside wanted it. The culprit is the memory KLAC buys for its systems' image processing: "As demand has strengthened, we have had to go out and buy more at higher prices." Offsets are memory-efficient redesigns (slow to cut in), value pricing on new products (existing backlog deals can't be repriced), and scale, while packaging and non-semi PC growth are a structural mix drag. Mgmt now pins the return to the 63-64% target to "the middle to the back half of 2027 into 2028," with process control GMs back toward the mid-60s in 2H27 on a consistent mix. Incremental vs. July ("likely continues… through 2027"): mgmt now gives timing, which also confirms another 3-4 quarters below target.

利润率。毛利率为 62.7%（环比+30 个基点），~比华尔街预期高出 20-40 个基点，但~比~买方预期的 63%低了 30 个基点，而 12 月指引的 62.5%在~营收增加 5.6 亿美元的情况下持平至下降，~比买方期望的水平低了 50 个基点。罪魁祸首是科磊为其系统图像处理所采购的内存："随着需求走强，我们不得不以更高的价格去采购更多。"抵消措施是内存效率方面的重新设计（导入缓慢）、新产品的价值定价（现有积压订单无法重新定价）以及规模效应，而封装和非半导体 PC 增长则是结构性的组合拖累。管理层现在将回归 63-64%目标的时间定在"2027 年中至后段进入 2028 年"，并预计过程控制毛利率在 2027 年下半年随着组合趋于稳定而回升至 60%中段。相较于 7 月的增量信息（"可能持续……贯穿 2027 年"）：管理层现在给出了时间指引，这也确认了还将有 3-4 个季度低于目标。

- **Leverage.** OM hit a record 46.1% (+240bps q/q), already inside the 45-47% 2030 target range, and the Dec guide implies 47.4%. Incrementals ran ~64% in Sep and ~57% implied for Dec; mgmt says at ~25% growth it runs "slightly above the top

end" of its 40-50% incremental model. Dec opex of ~$710M keeps rising through 2027 "at a much slower pace than revenue."

杠杆率。OM 创下 46.1%的纪录（环比+240 个基点），已进入 45-47%的 2030 年目标区间，而 12 月指引暗示将达到 47.4%。9 月增量利润率为 64%，12 月隐含增量利润率为 57%；管理层表示，在 25%的增长率下，其运行水平"略高于"40-50%增量模型的上限。12 月运营支出为 7.1 亿美元，到 2027 年将持续上升，"但增速远低于收入"。

- **WFE.** CY26 WFE (incl. packaging) moved up to ~mid-$150Bs (low-$150Bs in July, ">$150B" in Sept), matching LRCX. CY27 is seen above $200B (~+30%), above the ~$190B Street figure mgmt cited in July and in line with LRCX and the $200B+ bar most expected, though some buyside already at ~$225B for CY27 and ~$300B for CY28. Segment detail comes on the late-January call. KLAC under-grew CY26 WFE (revenue +~25% vs. WFE +~30%), only ~20bps of WFE share

WFE。CY26 WFE（含封装）上调至~150 多亿美元中段（7 月为 150 多亿美元低段，9 月为">1500 亿美元"），与 LRCX 一致。CY27 预计超过 2000 亿美元（约+30%），高于管理层 7 月引用的~1900 亿美元华尔街预期，与 LRCX 以及多数人预期的 2000 亿美元以上门槛一致，不过部分买方对 CY27 的预期已达~2250 亿美元，对 CY28 的预期已达~3000 亿美元。分部细节将在 1 月底的电话会议上公布。KLAC 的 CY26 WFE 增速低于整体（营收约+25%，而 WFE 约+30%），仅占 WFE 份额的~20 个基点

- **Demand.** Mgmt says "the AI demand environment has continued to strengthen," customers keep raising CY26/27 WFE plans, backlog "continues to grow," and funnel visibility is "unprecedented," with some orders already slotting into CY28. Drivers: leading-edge F/L for AI (large, valuable HPC die drive more sampling and e-beam adoption), HBM/DRAM greenfields, advanced packaging (~$1.1B in CY26, +70%, ~2x the market, shifting toward laser scanning and Gen4 as hybrid bonding moves sensitivity from microns to ~100nm), and PCB/component inspection (+43% y/y on GPU board complexity).

需求。管理层表示"AI 需求环境持续走强"，客户不断上调 CY26/27 晶圆厂设备（WFE）计划，积压订单"持续增长"，漏斗可见度"前所未有"，部分订单已排入 CY28。驱动因素包括：面向 AI 的先进制程逻辑（大面积、高价值 HPC 裸片推动更多采样和电子束采用）、HBM/DRAM 新建产线、先进封装（CY26 约 11 亿美元，同比增长 70%，~为市场的 2 倍，随着混合键合将灵敏度从微米级转向~100 纳米级，正转向激光扫描和 Gen4），以及 PCB/元器件检测（受 GPU 板复杂度推动，同比增长 43%）。

- **Supply.** Lead times average ~12 months and are stretching on Gen4/Gen5. KLAC's gating items are long-lead optics, and it doesn't compete with peers for them, so LRCX-style constraints don't carry over. The binding constraint is moving to customers: a couple of customers asked for deliveries and then put them on hold for cleanrooms, and one "desperate" customer can't take tools. Rick framed this as slower but longer growth into 2028.

  供应。交货周期平均为~12 个月，并且在 Gen4/Gen5 上还在拉长。KLAC 的关键卡点项目是长交期光学元件，而它并不与同行争夺这些元件，因此 LRCX 式的制约不会延续。约束正在转向客户：有几个客户要求交货，随后又因洁净室原因而暂缓，还有一个"绝望"的客户无法接收设备。Rick 将此描述为增长放缓但会延续到 2028 年。

- **China.** China jumped to 34% of revenue (26% in June), +48% q/q. On our math China was ~95% of Sep's $478M q/q add, so ex-China revenue was ~flat q/q (+1%), though +39% y/y. Dec flips: with China back in the high-20s%, ex-China revenue rises ~$650M (+~24% q/q). CY26 China stays at 27-29% (unchanged since March) and falls to the "low 20th percentile" in CY27 as China grows "a little bit." Mgmt did not discuss export controls.

  中国。中国跃升至收入的 34%（6 月为 26%），环比增长 48%。根据我们的计算，中国占 9 月环比增加的 4.78 亿美元中的约 95%，因此剔除中国的收入环比大致持平（+1%），但同比增长 39%。12 月出现反转：随着中国回落至 20%多的水平，剔除中国的收入增加约 6.5 亿美元（环比增长约 24%）。2026 日历年，中国保持在 27%-29%（自 3 月以来未变），并在 2027 日历年降至"20 百分位低位"，因为中国"略有增长"。管理层未讨论出口管制。

- **Cash.** FCF was a record $1.34B (32% margin) but missed Street's ~$1.44B on a $434M inventory build and capex of $195M (2x q/q, mostly land for a new India campus). Capex steps up to $600-800M a year "over the next few years" (vs. ~$475M TTM) as KLAC expands every factory. KLAC returned $1.24B ($936M of buybacks, its second-highest ever, plus $305M of dividends), ~93% of FCF.

  现金。自由现金流创下 13.4 亿美元的纪录（利润率 32%），但未达到华尔街预期的 14.4 亿美元，原因是 4.34 亿美元的库存增加和 1.95 亿美元的资本支出（环比翻倍，主要用于印度新园区的土地）。随着 KLAC 扩建每一家工厂，资本支出将在"未来几年"内提升至每年 6 亿至 8 亿美元（相比过去十二个月的 4.75 亿美元）。KLAC 返还了 12.4 亿美元（其中 9.36 亿美元用于回购，为其历史第二高，加上 3.05 亿美元的股息），占自由现金流的 93%。

- **Services.** Services of $850M grew +14% y/y (+4% q/q), roughly in line. CY26 is tracking the top of the 13-15% model, and mgmt sees “the higher end of the range” again in CY27 as new tools enter the installed base much faster than old ones retire.

  服务业务方面，其收入为 8.5 亿美元，同比增长 14%，环比增长 4%，增长幅度与预期基本一致。2026 年的增长率有望达到 13%-15%的区间上限；管理层预计，随着新工具的部署速度远快于旧工具的淘汰速度，2027 年的增长率仍将处于这一区间的较高水平。

- **Pricing.** No pricing pressure; the margin issue is input cost. Mgmt’s lever is “returns-based value sharing” on new capabilities, consistent with what peers are saying. On competition, mgmt expects node-to-node share gains at 2nm/1.4nm (no number given) as e-beam and its linkage to optical become more important. Tariffs didn’t come up on the call.

  定价方面：不存在定价压力；利润空间问题主要源于成本因素。管理层采取的策略是针对新技术成果实行“基于回报的价值分享”机制，这一做法与其他同行的一致。至于竞争状况，管理层预计随着电子束技术及其与光学技术的结合越来越重要，2 纳米/1.4 纳米工艺节点的市场份额将会上升（具体数字未给出）。此次通话中并未涉及关税相关话题。

Bull vs. Bear Debate

牛市与熊市之争

Bull Case

The bull thesis is that KLAC is the toll collector on rising chip complexity in what is shaping up to be a multi-year, AI-driven WFE upcycle. It holds roughly 55-60% of process control, several times its nearest competitor, and intensity rises with every driver in this cycle: larger and more valuable HPC die at 2nm and 1.4nm, HBM’s tighter specs, hybrid bonding in advanced packaging, and greenfield fabs where process control tools go in first (plus Terafab-type mega-fab optionality). When customers earn record margins and are short capacity, yield is worth more, which supports both sampling rates and KLAC’s ability to price new tools. Add a services business that is ~20% of revenue, is on track for a 17th straight year of growth and should compound at the high end of 13-15% as a fast-growing installed base comes on, plus best-in-class margins and ~90%+ of FCF returned, and bulls argue KLAC deserves a premium multiple through the cycle rather than a peak-cycle discount.

看多逻辑是，KLAC 是芯片复杂度不断提升中的“收费站”，而当前正形成一个由 AI 驱动、持续多年的 WFE 上行周期。它在过程控制领域占据约 55-60%的份额，是紧随其后的竞争对手的数倍，而且在这一周期中，每一个驱动因素都会提升其强度：2nm 和 1.4nm 下更大、更有价值的 HPC 芯片，HBM 更严格的规格，先进封装中的混合键合，以及过程控制设备最先进驻的绿地晶圆厂（再加上 Terafab 型超级晶圆厂的可选性）。当客户赚取创纪录的利润且产能短缺时，良率就更有价值，这既支撑了采样率，也支撑了 KLAC 对新设备的定价能力。该公司还拥有一项服务业务，该业务为公司营收的 1001#20%；它已连续 17 年保持增长势头，随着越来越多的客户使用其服务，其增长率有望维持在 13-15%的高水平。此外，该业务的利润率处于行业顶尖水平，自由现金流的返还率也高达 1002#90%以上。因此，看好该股的人认为，在整个经济周期中，KLAC 都应获得较高的估值，而非在周期高峰时被给予折价。

Bear Case

The bear thesis is that semicaps are late in the cycle and the multiple compresses even as numbers rise. In the last two upcycles KLAC's P/E fell from ~25x to ~12x (2021-22) and from ~31x to ~18x (2024-25) while estimates rose ~55-60%, and the stock still trades at a premium to the market with the 10-year near 5% and the Fed leaning tighter. WFE growth is gated by cleanrooms, power and raw materials, so the ~$300B CY28 the buyside is penciling may not arrive on time; Rick said as much on the call. Hyperscaler capex printed below Street this week, and at least one large AI spender is already guiding to a capex step-down later in the decade, which feeds the peak-spend worry. KLAC-specific risks pile on top: the next leg of WFE is memory-led (DRAM greenfields), where KLAC has historically under-indexed; China (34% of Sep revenue) is heading to the low-20s%; AMAT and smaller players are pushing into process control and e-beam, threatening a ~60% share; and KLAC already under-grew WFE in CY26.

空头论点是，半导体资本设备股已处于周期后段，即便业绩数字上升，估值倍数也会被压缩。在过去两轮上行周期中，KLAC 的市盈率从~25 倍降至~12 倍（2021-22 年），并从~31 倍降至~18 倍（2024-25 年），而同期盈利预期上升了~55-60%，且该股目前相对于市场仍存在溢价，同时 10 年期收益率接近 5%、美联储立场偏紧。WFE 增长受限于洁净室、电力和原材料，因此买方所预估的 CY28 ~$300B 可能无法按时实现；Rick 在电话会上也表达了同样的看法。本周超大规模云厂商的资本支出低于华尔街预期，而且至少有一家大型 AI 支出方已指引将在本十年后期下调资本支出，这加剧了市场对支出见顶的担忧。KLAC 特有的风险更是雪上加霜：WFE 的下一阶段将由存储主导（DRAM 新建产能），而 KLAC 在这一领域历来占比偏低；中国（占 9 月营收 34%）正朝着 20%出头的水平下滑；AMAT 和规模较小的厂商正在进军过程控制和电子束领域，威胁要占据 1007#60%的市场份额；而且 KLAC 在 26 财年的增长速度已经低于 WFE。

This quarter gives bears ammunition on quality. Dec's systems growth is all memory: F/L systems are ~flat q/q, so the growth mix is exactly the one bears worried about, and ~95% of Sep's q/q add came from China. GM is stuck at 62.5%, ~50bps below the buyside, on memory costs mgmt can't reprice into existing backlog, with the fix pushed to mid/late CY27 into CY28 and packaging/non-semi PC growth diluting mix. Opex is ramping at ~2x the prior pace, capex steps up to $600-800M a year, and FCF missed on a $434M inventory build. The ">$200B" CY27 WFE call only matched LRCX and the $200B+ bar, below the ~$225B some buyside models already carry, so it doesn't lift buyside numbers, and CY27 growth will be "more linear" rather than another back-half spike. CY27 segment color doesn't come until late January, leaving the stock to trade on sector flows and hyperscaler capex headlines until then.

本季度的业绩数据为看跌派提供了依据。12 月的系统业务增长完全依赖于内存业务：F/L 系列产品的环比增长率为 1001#，处于停滞状态；而 9 月环比增长的 95%都来自中国市场。通用电气的增长率则为 62.5%，比预期低 50 个基点。由于内存成本问题，该公司无法对现有订单重新定价，因此解决方案要等到 2027 年中期或晚期才能实施。此外，包装及非半导体相关业务的增长也进一步削弱了整体业绩表现。运营支出正以~2 倍于此前速度攀升，资本支出升至每年 6 亿至 8 亿美元，自由现金流因 4.34 亿美元库存增加而未达预期。"超过 2000 亿美元"的 CY27 WFE 预期仅与 LRCX 和 2000 亿美元以上的门槛相符，低于~部分买方模型已采用的 2250 亿美元，因此不会抬升买方数字，且 CY27 增长将"更为线性"，而非又一次下半年激增。CY27 分部细节要到 1 月底才会公布，在那之前，该股只能受板块资金流和超大规模企业资本支出头条驱动。

And “customers can’t take tools because their cleanroom is late” cuts both ways: it caps CY27 upside and makes KLAC’s deliveries hostage to customers’ construction schedules.

而“客户因洁净室建设进度延迟而无法领取工具”这一情况既有负面影响：它限制了 27 财年的盈利空间，同时也让 KLAC 的货物交付取决于客户的施工进度。

FTNT -26%: Product peaked in 2Q and the services hand-off slipped to 2027, so beating Street on results and guidance didn’t clear the buyside bar

FTNT：跌幅达 26%。该产品的业绩在第二季度已达到顶峰，而相关服务的交付时间则被推迟到 2027 年；因此，尽管其业绩和业绩预期优于市场预期，但仍不足以成为买入该股的理由。

FTNT beat Street on billings, product revenue, OM and EPS and raised FY26 billings by $193M. But product growth (+37%) missed the ~50% buyside bogey, services slowed to +12.7% and the FY services guide was cut, and the 4Q guide implies product growth slows again to ~20%.

FTNT 在营收、产品收入、运营利润以及每股收益等方面均优于 Street 公司；其 2026 财年的营收预计还将增加 1.93 亿美元。不过，产品的增长速度为 37%，未能达到 100%以上的预期目标；服务领域的增长速度则为 12.7%，低于预期，因此该公司下调了 2026 财年服务领域的业绩预期。此外，第四季度的业绩预期也表明，产品的增长速度将会进一步放缓至 20%左右。

Sentiment/positioning skewed short heading into the print, and this print will finally make bears happy who have held on to the view that the refresh cycle has peaked: The 1H inventory cushion is gone, and pricing (worth ~10pts of billings growth) is slowing meaning more decel is coming, weakest Q3 sequential product growth since FTNT went public, product GM fell 540bps q/q to 64.5%, services missed a second time after mgmt had promised a 2H pickup, and mgmt now cites discounting and lower attach. Not a lot of bullish feedback post the print.

财报发布前，市场情绪/仓位布局明显偏空，而这份财报终于会让那些坚持认为更新周期已见顶的空头感到满意：上半年的库存缓冲已经消失，定价（约占账单增长 10 个百分点的 1001#）正在放缓，意味着更多减速即将到来，这是自 FTNT 上市以来最弱的第三季度环比产品增长，产品毛利率环比下降 540 个基点至 64.5%，服务业务在管理层承诺下半年回升后第二次不及预期，而管理层现在提到折扣和附加率下降。财报发布后，看涨反馈不多。

Key Takeaways

- **Product.** Product revenue of $765M grew +36.8% y/y (2Q +51.9%).

  产品业务方面，产品收入为 7.65 亿美元，同比增长 36.8%（第二季度的增长率则为 51.9%）。

  - It beat Street's $726M (+29.8%) by ~5% but fell well short of the ~50% buyside bogey (desks ranged ~47-53%, ~$820-855M), ending five straight quarters of acceleration.

    这一业绩虽比 Street 预测的 7.26 亿美元（增长 29.8%）高出 1.001% 至 5%，但仍远低于市场预期的 50%水平（各机构的预测范围在 47%-53%之间，而~的预测值为 8.20 亿至 8.55 亿美元），至此，连续五个季度的快速增长势头已告终结。

  - Product fell ~$8M q/q vs. +$50M in 3Q25, and total revenue grew only 1.5% q/q, the weakest 3Q sequential since FTNT went public.

    该产品的环比降幅为 1.001 亿美元，而 2025 年第三季度的环比增幅则为 5000 万美元；总营收的环比增长幅度仅为 1.5%，这是 FTNT 上市以来最弱的季度表现。

  - On a 2-yr stack, product slowed to ~55 from ~65 in 2Q, so the decel isn't just the tougher comp (3Q25 +18% vs. 2Q25 +12.6%).

    在为期 2 年的观察期内，该产品的增长速度从第二季度的~65 放缓至第三季度的~55；这种增速放缓并非仅仅因为材料变得更难加工了（2025 年第三季度的增长率为+18%，而 2025 年第二季度为 +12.6%）。

  - Mgmt says demand was "probably even stronger than the first half," saw no slowdown in 3Q or October, and says customers kept moving to higher-end FortiGates (AI segmentation, data center), which lifted ASPs.

管理层表示，需求“很可能甚至比上半年还要强劲”；第三季度及 10 月的需求也没有出现下降趋势。此外，客户们持续选择更高端的 FortiGate 产品（具备人工智能功能、适用于数据中心），这提升了平均销售价格。

- **Supply.** Mgmt’s explanation for the decel is new and supply-driven, not demand-driven.

  供应方面，管理层对需求放缓的解释是：这是由供应问题导致的，而非需求问题。

  - 1H shipments drew on FTNT’s usual ~6 months of on-hand inventory, bought before memory and component prices rose. That cushion “normalized” in 3Q, and lead times on memory-heavy parts got longer.

    1H 时期的产品供应依赖于 FTNT 通常持有的约 1001#6 个月的库存，这些库存是在内存及芯片价格尚未上涨时采购的。到了 3Q，这种缓冲能力逐渐消失，而那些对内存需求较高的芯片的交货周期也变长了。

  - Asked whether FTNT is supply-constrained or just paying more, Ken answered “a little bit both.” In 1H, the inventory position was pitched as a share-gain edge.

    当被问及 FTNT 是面临供应限制，还是只是需要支付更高的成本时，肯回答说“两者都有”。在上半年，其库存状况被视为一种优势。

  - Inventory rose to $591M (from $426M at 2Q and $400M at YE25) as FTNT bought more components and raw materials.

    由于 FTNT 采购了更多零部件和原材料，其库存金额上升至 5.91 亿美元（第二季度为 4.26 亿美元，2025 财年为 4 亿美元）。

  - Mgmt says standard FortiGates, switches and APs are still available; the tightness is in OT and specialized devices.

    管理层表示，普通的 FortiGates、交换机及无线接入点仍然有货；短缺的情况主要集中在运营技术设备以及专用设备上。

- **Pricing.** Price increases added ~10pts to 3Q billings growth.

  定价方面，价格上涨使得第三季度的营收增长额增加了 1001#10 点。

  - At the end of the call, IR corrected Ken’s “10% benefit on the top line” to billings, not revenue.

通话结束时，IR 部门纠正了肯的说法，将其所说的“10%的收益增长”指为账单额的增长，而非营收的增长。

- In July mgmt had assumed a “high single digits” price impact for 2H billings. The 4Q billings guide again embeds ~10pts.

  7 月时，管理层预计下半年的营收受价格变动的影响幅度会在“个位数高位”。而第四季度的营收预测则仍为 1001#10 个百分点。

- Another list-price increase was announced in September, effective early November. Mgmt says increases have “slowed down” vs. 1Q/2Q and “stabilized,” and the benefit moderates in 2027.

  9 月又宣布了一次价格上调，新价格将于 11 月初开始实施。管理层表示，与第一季度和第二季度相比，价格上升的速度已经“放缓”，并且趋于“稳定”；到 2027 年时，这种价格上涨带来的好处也会有所减弱。

- Simple math puts ex-pricing billings growth at ~19%, ~4pts slower than 2Q. Mgmt told callers growth ex-pricing was roughly consistent with 2Q, which doesn’t fully square with that math.

  根据简单的计算，扣除价格变动因素后，营收增长率为 1001#19%，比第二季度慢了 1002#4 个百分点。管理层则表示，扣除价格变动因素后的营收增长与第二季度的水平大致相当，这一说法与上述计算结果并不一致。

  - Sell-side estimates of how much of product growth came from price range from ~10pts to 30+pts. That spread is why FY27 product estimates are so far apart.

    对于产品增长中有多少源自价格因素，卖方们的估算范围在 100 到 30 个百分点之间。正是这种差异，导致了 27 财年产品增长预估值出现如此大的差别。

- **Pull-forward.** Mgmt acknowledged customers bought FortiGates ahead of planned deployment, to beat price increases and secure supply. Those purchases are behind the delayed service activations.

  管理层承认，客户为避免价格上涨并确保产品供应，提前购买了 FortiGates 设备。正是这些提前采购的行为导致了服务启动的延迟。

  - In July mgmt said it saw no pull-forward or excess inventory.

7 月，管理层表示并未发现库存提前积压或过剩的情况。

- On callbacks, mgmt allowed for “some pull-forward” from pricing and supply worries but said there was no clear sign of a material demand pull-forward. It noted billings were more weighted to 1H this year.

  关于回调问题，管理层承认价格和供应方面的担忧会导致一定程度的需求提前上升，但表示并未出现需求大幅提前上升的明显迹象。同时指出，今年的营收更集中在上半年。

- Channel inventory was flat (down as a % of billings), and contract duration stayed ~30 months.

  频道库存保持稳定（按营收占比计算则有所下降），合同期限仍为 1001#30 个月。

- **Services.** Services revenue of $1.313B grew +12.7% y/y (2Q +13.7%).That missed Street’s $1.332B (+14.2%) and the ~$1.35-1.36B bogey. Security subscriptions grew ~12% and tech support ~13%.

  服务业务方面，该业务的收入为 13.13 亿美元，同比增长 12.7%（第二季度的增长率则为 13.7%）。这一数字低于市场预期的 13.32 亿美元（同比增长 14.2%），也低于 1.35 亿至 1.36 亿美元的预期范围。安全相关服务的订阅量增长了 12%，而技术支持服务的增长率为 13%。

- The FY services guide was cut $40M to $5.15-5.17B (+12.6%), implying 4Q +12.6% vs. Street +14.3%. That means no 2H pickup, after mgmt said in July services growth would “pick up in the second half.”

  该财年的服务业务预期值从 4000 万美元下调至 51.5 亿至 51.7 亿美元，增幅为 12.6%；这意味着第四季度的增长率也将为 12.6%，而市场预期则为 14.3%。这表明服务业务在下半年不会有所好转，尽管管理层曾在 7 月表示服务业务的增长“将在下半年有所提升”。

- The main explanation is ramped activations on large new-customer and expansion enterprise agreements (some start in 2027), plus large customers folding services into enterprise agreements at lower yields. 4Q is also seasonally slow for rollouts.

主要原因在于：新签约的大客户及扩张型企业协议所带来的逐步上升的激活成本（部分协议始于 2027 年），以及大客户倾向于以更低的收益将相关服务纳入企业协议中。此外，第四季度本就是产品推广工作的淡季。

- Mgmt also flagged slower-moving causes:

  管理层还指出了进展较慢的原因：

  - lower attach on networking products and on product-heavy sovereign deployments

    网络产品以及那些对产品依赖度较高的国家级部署项目中的成本更低。

  - more discounting on services relative to hardware as prices rise

    随着价格上升，服务相比硬件所享受的折扣幅度更大。

  - a US tax incentive favoring depreciable hardware

    一项旨在鼓励对可折旧硬件进行折旧处理的美国税收优惠政策

- The leading indicators improved:

  领先指标有所改善：

  - service billings +26% 服务账单收入增长 26%
  - current service billings +18% (2Q +16%), though short of ~19-20% bogeys, with some desks in the mid-20s

    当前服务费用增长率为 18%（第二季度为 16%），虽未达到 1001#19-20%这一目标水平，但部分业务部门的增长率也在 20% 左右。

  - short-term deferred revenue +14.5%, a five-quarter high

    短期递延收入增长 14.5%，创下五个季度以来的最高水平

  - total deferred revenue +19%

    递延收入总额增长 19%

  - RPO +19% to $7.98B RPO 上升 19%，达到 79.8 亿美元

- **Guide.** The guide beat Street but mostly missed the buyside numbers.

指南。该指南的表现优于《Street》杂志，但大多未能准确预测买入时机的相关数据。

- **4Q revenue:** $2.155-2.245B, +15.5% at the midpoint. That beat Street's $2.15B (+13%) but missed bulls at ~+18-19%. It's a ~5pt decel from 3Q on a similar comp (2-yr stack ~30 vs. ~35).

  第四季度营收为 21.55 亿至 22.45 亿美元，按中间值计算增长率为 15.5%。这一数值高于市场预期的 21.5 亿美元（增长率为 13%），但低于乐观派预计的 22.11 亿美元（增长率为 18%-19%）。与第三季度相比，其增长速度下降了 5 个百分点；若以两年期为比较标准，则增长率为 30%，而市场预期为 35%。

- **4Q billings:** $2.775-2.925B, +20% at the midpoint. That beat Street's $2.67B (+13%) and landed at the low end of the ~$2.84-2.92B bogeys.

  第四财季的营收为 27.75 亿至 29.25 亿美元，按中间值计算增长了 20%。这一数字高于市场预期的 26.7 亿美元（增长 13%），同时也处于 28.4 亿至 29.2 亿美元这一预测区间内的较低水平。

- **FY26 billings:** raised $193M at the midpoint to $9.643B (+28%), more than 5x the $36M 3Q beat over the guide midpoint, but short of the ~$9.75-9.8B buyside number. It is now $1.14B above the initial February guide.

  2026 财年的营收情况：截至中期，公司已筹集 1.93 亿美元，总营收达到 96.43 亿美元，同比增长 28%。这一数字是第三季度实际营收的 5 倍多，而第三季度的实际营收仅比预期高出 3600 万美元而已。不过，这一数值仍低于市场预期的 97.5 亿至 98 亿美元。目前，公司的总营收已比 2 月份时的初始预期高出 11.4 亿美元。

- **Product:** implied FY product rose $110M to ~$3.01B (+36%). That puts 4Q product at ~$833M (+20.5% vs. Street +11%), but only +9% q/q vs. the usual +21-24% 4Q step-up.

  产品方面：按年度计算，该产品的价值增长了 1.1 亿美元，达到 1001#$30.1 亿美元，增幅为 36%。这样一来，第四季度的产品价值则为 1002#$8.33 亿美元，增幅为 20.5%，而市场预期仅为 11%。与通常 21-24%的季度增长幅度相比，这一增幅则仅为 9%。

- **FY27.** This is mgmt's first FY27 framework; the formal guide comes in Jan/Feb.

2027 财年。这是管理层制定的首个 2027 财年规划框架；正式指南将于 1 月或 2 月发布。

- Billings and revenue growth should “outpace the growth of our overall addressable market,” and services growth should be above 2026’s ~12.6%.

  营收与收入增长速度应“超过我们整体目标市场的增长速度”，而服务领域的增长速度则应高于 2026 年的 1001#12.6%这一水平。

- Ken cited ~16% growth for the SASE firewall market, but callbacks clarified that is the 2025-29 CAGR, not a 2027 target.

  肯提到 SASE 防火墙市场的增长率为~16%，但后续说明指出，那是指 2025 年至 2029 年的年均增长率，并非 2027 年的目标值。

- On the raised FY26 base, Street’s pre-print FY27 numbers (revenue $9.03B, billings $10.33B, product $3.14B) imply only ~+10.5% revenue, ~+7% billings and ~+4% product growth. On the lower FY26 services base they imply ~+14% services. So the FY27 risk has shifted from product toward services.

  在已上调的 FY26 基数上，Street 在财报发布前的 FY27 预测数据（营收 90.3 亿美元、账单金额 103.3 亿美元、产品收入 31.4 亿美元）仅隐含~+10.5%的营收增长、~+7%的账单增长和~+4%的产品增长。在较低的 FY26 服务基数上，这些数据隐含~+14%的服务增长。因此，FY27 的风险已从产品转向服务。

- **Margins.** GM was weaker than expected, but OM beat on cost control.

  利润状况方面，通用汽车的业绩低于预期，而奥姆公司在成本控制方面表现优异。

  - GM of 79.6% was ~50bps below Street (~80.1%), -130bps q/q and -200bps y/y.

    其毛利率为 79.6%，比市场平均水平（约 80.1%）低 1001#50 个基点；环比下降 130 个基点，同比下降 200 个基点。

  - Product GM fell to 64.5% vs. ~67% Street, -540bps q/q and the lowest since 1Q24, as higher-cost components came through after 1H benefited from cheaper inventory. Services GM improved to ~88.4%.

产品毛利率降至 64.5%，低于市场预期的 1001#67%，环比下降 540 个基点，为 2024 年第一季度以来的最低水平；这主要是由于上半年得益于较低的库存成本，而如今高成本的组件开始产生影响。服务业务的毛利率则上升至 1002#88.4%。

- OM of 38.2% (a 3Q record) beat Street (~36.0%) by ~220bps, with opex ~5% below Street and R&D -5% q/q. FY OM was raised 1pt to 36.5-37.5%.

营业利润率为 38.2%，创下第三季度以来的最高水平，比市场预期（约 36.0%）高出 1001#220 个基点；运营费用则比市场预期低 1002#5%，而研发支出则环比下降了 5%。全年的营业利润率预计在 36.5%至 37.5%之间，较此前上调了 1 个百分点。

- The 4Q GM guide of 78-80% is ~50bps below Street at the midpoint; the 4Q OM guide of 35.5-37.5% is above Street (~35.0%).

第四财季的毛利率预期为 78%-80%，这一数值比市场平均预期低 1001#50 个基点；而第四财季的营业利润率预期为 35.5%-37.5%，这一数值则高于市场平均水平（约 35.0%）。

- Mgmt still prices to keep GM neutral, but the CFO conceded “You can only increase the prices so much... They also have limited budget.”

管理层仍希望保持通用汽车的股价稳定，但首席财务官承认：“价格提升是有限度的……而且他们的预算也很紧张。”

- **Pillars.** It wasn’t just firewalls slowing.

支柱。问题并不只是防火墙变慢了。

- **Unified SASE:** billings +22% (2Q +35%). Net new ARR was $39M vs. $79M in 2Q and $38M a year ago; ARR is $1.444B (+18%).

统一型 SASE 业务：营收增长 22%（第二季度为 35%）。新增订阅收入为 3900 万美元，而第二季度为 7900 万美元，去年同期则为 3800 万美元；总订阅收入为 14.44 亿美元，同比增长 18%。

- **SecOps:** billings +15% (2Q +25%). ARR is $551M (+16% vs. +20%), and net new ARR was $20M vs. $30M a year ago. Mgmt blames large-enterprise mix (SecOps sells better in mid-market), a licensing transition, and less benefit from price increases.

SecOps 业务：营收增长了 15%（第二季度则增长了 25%）。年度营收为 5.51 亿美元，增长率为 16%，而去年同期为 20%；新增的年度营收为 2000 万美元，低于去年同期的 3000 万美元。管理层认为，这是由于该产品更适用于大型企业，而在中端市场中的表现较差，再加上许可模式的变化，以及价格上涨带来的收益提升有限所致。

- **OT:** billings grew ~40%, down from >55% in 2Q and ~70% in 1Q.

OT：营收增长率为 1001#40%，低于第二季度的 55%以上以及第一季度的 1002#70%的增长率。

- **AI.** Mgmt called network security "the most critical foundation of AI security," with the firewall as the inline enforcement point for AI traffic.

人工智能领域的相关专家认为，网络安全是"人工智能安全体系中最关键的基石"，而防火墙则是用于管控人工智能相关流量的关键工具。

- Ken says AI agent traffic is driving more high-end units for internal segmentation, and companies running open-weight models on-prem add demand.

肯表示，人工智能代理的流量推动了更多高端单元的出现，用于内部数据分类；同时，在本地运行开放权重模型的企业也带来了额外的需求。

- The COO said the AI threat "seems a lot more durable" than past threat-driven cycles.

首席运营官表示，人工智能带来的威胁"似乎比以往那些由威胁驱动的周期更为持久"。

- **Callbacks pointed to less frontier-model urgency (the "Mythos" effect) than in 2Q.**

反馈表明，与第二季度相比，前沿模型的紧迫感有所减弱（即"神话"效应）。

- **Demand.** Mgmt called demand "pretty solid" and broad-based across segments, verticals and regions, with no slowdown into October despite a heavy month of AI-discovered vulnerabilities. The total value of $1M+ deals grew 51%, led by US large enterprise. Revenue grew +21% in the Americas, +23% in EMEA and +14% in APAC.

需求方面。管理层认为需求“相当强劲”，且在不同行业、领域及地区都表现良好。尽管 8 月出现了大量因人工智能技术而被发现的漏洞，但需求并未出现下滑。价值 100 万美元以上的交易数量增长了 51%，其中美国的大型企业是推动这一增长的主要力量。在美洲地区的营收增长了 21%，在 EMEA 地区增长了 23%，而在亚太地区则增长了 14%。

- **Callbacks.** The most important clarification was that the 16% market growth figure is a multi-year CAGR, not a 2027 floor. Mgmt also said:

关于回调问题，最重要的说明是：16%的市场增长率实际上是指多年的复合年均增长率，并非 2027 年的最低增长目标。管理层还表示：

  - pricing adds ~10pts to 4Q billings growth and moderates next year

    定价因素使第四季度的营收增长额增加了 1001#10 点，同时也会对明年的增长速度产生一定影响。

  - underlying product demand ex-pricing was roughly consistent with 2Q

    剔除价格因素后，相关产品的需求与第二季度的水平大致相当。

  - some large customers bought hardware early to lock in supply and price while others deferred, so net pull-forward is hard to size

    一些大客户提前购买了硬件，以便锁定供应和价格；而另一些则选择推迟购买，因此很难准确估算整体的需求增长幅度。

  - some enterprise-agreement service start dates run into 2027 (services normally start ~90 days after purchase: 60 days in the US, 120 internationally)

    有些企业协议服务的开始日期在 2027 年之后（通常，服务会在购买后 1001#90 天开始提供：在美国为 60 天，而在其他国家则为 120 天）。

  - services growth could reach the mid-teens by 2H27 as short-term deferred revenue turns into revenue

    到 2027 年下半年，随着短期递延收入转为实际营收，相关服务领域的增长速度有望达到 15%左右。

Bull vs Bear Debate 多头与空头辩论

The bull thesis is that FTNT is the volume and price-performance leader in network

security just as the network becomes the main enforcement point for AI. FortiOS runs firewall, SD-WAN, SASE and AI security on one operating system and one custom ASIC roadmap. That gives FTNT the lowest cost per unit of throughput, the largest installed base (over half of global firewall units) and more direct control of its supply chain than peers. AI raises the need for inspection inside the network, from east-west agent traffic to GPU clusters to open-weight models run on-prem. That pushes customers toward higher-end FortiGates with higher ASPs. Past the current refresh, bulls see a long runway in OT/IT convergence (NIS2, and manufacturing is the most-attacked sector five years running), sovereign SASE (which mgmt sizes at 2-3x the cloud-only TAM) and the 2026-27 end-of-support refresh cohorts.

看多观点认为，Fortinet 是网络安全领域出货量和性价比的领导者，而网络正成为 AI 的主要执行点。FortiOS 在一个操作系统和一套定制 ASIC 路线图上运行防火墙、SD-WAN、SASE 和 AI 安全。这使 Fortinet 拥有最低的单位吞吐量成本、最大的装机量（占全球防火墙设备的一半以上），以及比同行更直接的供应链控制。AI 提升了网络内部检测的需求，从东西向代理流量到 GPU 集群，再到本地运行的开源权重模型。这推动客户转向更高端的 FortiGate，带来更高的平均售价。在当前的更新周期之后，看多方认为 OT/IT 融合（NIS2，且制造业连续五年成为受攻击最多的行业）、主权 SASE（管理层估计其 TAM 是纯云方案的 2-3 倍）以及 2026-27 年的支持终止更新群体，都预示着漫长的增长跑道。更多一手研报请加微信：FCCNN88

Few security names can match the economics: Rule-of-55+ (~20% growth plus a ~37% OM), ~40% FCF margins, a 33.9% GAAP OM and a $2B buyback.

很少有哪家安保公司的财务表现能与之媲美：其增长率约为 20%，运营利润率高达 1001#37%；自由现金流比率为 1002#40%；根据 GAAP 标准计算的运营利润率为 33.9%；此外还进行了 20 亿美元的股票回购。

Bulls will argue this quarter was a beat-and-raise that the market took for a top. Billings, product revenue, OM, EPS and FCF all beat Street. FY billings were raised $193M on a $36M beat and are now $1.14B above February's guide. The 4Q billings guide (+20%) and implied 4Q product (+20.5%) sit far above Street, and the total value of $1M+ deals grew 51%. Mgmt says demand exceeds supply, so longer lead times delay revenue rather than lose it. In the bull view the services miss is timing. Large customers bought hardware upfront and pushed service start dates to match their rollouts, but they have already committed: service billings grew +26%, current service billings sped up to +18%, short-term deferred revenue grew +14.5% and total deferred +19%.

多头会辩称，本季度是一次超预期并上调指引的业绩，而市场却将其视为见顶。账单、产品收入、营业利润率、每股收益和自由现金流全部超出华尔街预期。全年账单指引在中值超预期 3600 万美元的基础上上调了 1.93 亿美元，目前比 2 月的指引高出 11.4 亿美元。第四季度账单指引（+20%）和隐含的第四季度产品收入（+20.5%）远高于华尔街预期，百万美元以上大单的总价值增长了 51%。管理层表示需求超过供给，因此更长的交付周期只是推迟收入，而非丢失收入。在多头看来，服务业务的未达预期只是时间问题。大客户提前购买了硬件，并将服务开始日期推迟到与其部署节奏相匹配，但他们已经做出了承诺：服务账单增长 26%，当期服务账单加速至增长 18%，短期递延收入增长 14.5%，总递延收入增长 19%。

That sets up services growth in the mid-teens by 2H27, and the math matters because services are ~63% of revenue. Moving from ~12.6% to ~15% services growth adds ~1.5pts to total growth, enough to keep FY27 revenue growth at 12%+ even if product slows to high single digits. The FortiGuard AI subscriptions and the FortiLink SASE overlay on the installed base add new attach on top. Post-print FY27 estimates moved up, so the 26% drop was entirely multiple compression, and it leaves the stock at its 5-yr average EV/FCF. Services speeding up in 1H27, or a February FY27 guide that holds product near double digits, would lift both estimates and the multiple.

这将推动服务业务在 2027 年下半年实现 15%左右的增长，而这一测算之所以重要，是因为服务业务占收入的 63%。服务业务增速从 12.6%提升至 15%，将为总增长贡献 1.5 个百分点，足以在产品业务增速放缓至高个位数的情况下，仍将 2027 财年收入增速维持在 12%以上。FortiGuard AI 订阅以及基于存量客户安装基础的 FortiLink SASE 叠加层，进一步带来了新的附加销售。财报发布后，2027 财年预期被上调，因此 26%的跌幅完全来自估值倍数压缩，且使该股处于其 5 年平均 EV/FCF 水平。服务业务在 2027 年上半年加速增长，或者 2 月发布的 2027 财年指引将产品业务增速维持在接近双位数，都将同时提振预期和估值倍数。

The bear thesis is that FTNT is a cyclical hardware company that was priced as a durable software compounder at the top of its cycle. FY26 product growth of ~36% was boosted by four things that don’t repeat. Price added ~10pts to billings growth. A ~6-month inventory cushion bought before memory prices rose let FTNT ship while others waited for parts. Customers bought ahead of deployment to beat price increases and allocation, which mgmt now acknowledges. And frontier-model threat urgency spiked in 2Q, then faded in 3Q. FY27 laps all of it. The pricing benefit moderates, inventory has normalized and lead times are longer. Hardware already bought but not deployed, in some cases until 2027, is demand that won’t recur. The

last cycle is the template: the 2021-22 refresh was followed by 2023-24 digestion, when product fell to -1% in 2024. FFIV's repricing the day before showed how the market treats a finite refresh.

空头论点是，FTNT 是一家周期性硬件公司，却在其周期顶部被按照持久性软件复利成长股来定价。2026 财年产品增长~36%受到四件不会重演的事情推动。价格因素为账单增长贡献了~10 个百分点。在内存价格上涨前购入的~6 个月库存缓冲，让 FTNT 得以在其他人等待零部件时继续出货。客户在部署前提前购买，以赶在涨价和配给之前下手，管理层现在也承认了这一点。而前沿模型威胁的紧迫感在第二季度飙升，随后在第三季度消退。2027 财年将完整面临所有这些因素的同比高基数。定价带来的收益趋于温和，库存已恢复正常，交货周期也更长。那些已经购买但尚未投入使用的硬件，有些甚至要等到 2027 年才会被使用，这类需求不会再出现。之前的周期可以作为参考：2021-22 年度有产品更新，随后在 2023-24 年度则进入了产品需求下降期，2024 年的需求降幅达到了-1%。FFIV 在日前调整的价格也体现了市场对于这种有限次的产品更新的反应。

This quarter fed every leg of that thesis. Product growth fell 15pts, the 2-yr stack fell ~10pts, and the 4Q guide implies only +9% q/q vs. a +21-24% seasonal norm. Product GM fell 540bps q/q to 64.5% even with price increases, and the CFO conceded that customers' limited budgets cap further pass-through. Services slowed after mgmt had promised a 2H pickup. The FY services cut came with explanations that look structural:

本季度印证了该论点的每一个环节。产品增长下降 15 个百分点，两年期堆叠下降约 10 个百分点，而第四季度指引意味着环比仅增长 9%，而季节性常态为增长 21-24%。即便提价，产品毛利率仍环比下降 540 个基点至 64.5%，首席财务官承认客户预算有限，限制了进一步转嫁成本的空间。管理层此前承诺下半年服务业务将回升，但该业务却放缓了。全年服务业务预期下调所附带的解释看起来是结构性的：

- product-heavy networking and sovereign deals with lower attach

  以产品为导向的网络架构，以及附带条件较少的主权级交易

- neocloud and service-provider customers that run their own services on FTNT gear

  在 FTNT 设备上运行自己服务的 Neocloud 客户及服务提供商客户。

- more discounting on services relative to hardware as prices rise

随着价格上升，服务相比硬件的折扣幅度会更大。

- a US tax push toward hardware (likely 100% bonus depreciation)

美国针对硬件领域的税收优惠政策（很可能是 100%的加速折旧）。

The pillars meant to offset the firewall cycle are slowing too. SASE billings grew +22% (from +35%), SASE net new ARR halved q/q, SecOps billings grew +15% (from +25%) and OT grew ~+40% (from >55%).

原本用于抵消防火墙相关成本的因素，其发展速度也在放缓。SASE 业务的营收增长率为 22%（此前为 35%），环比来看，SASE 业务的新客户带来的收入则减少了一半；SecOps 业务的营收增长率为 15%（此前为 25%）；而 OT 业务的营收增长率则为 1001%+40%（此前超过 55%）。

The bull's 15% FY27 services assumption is the most exposed. Current service billings at +18% missed bogeys, and services would have to speed up ~2.5pts while mix shifts toward lower-attach deals. Estimates could fall if FY27 product is flat to down, services stays at ~12-13% and the GM and opex tailwinds reverse. The multiple could also compress further toward hardware-heavy peers as the story shifts from "AI security platform" to "post-peak refresh."

该投行对 2027 财年服务业务 15%的假设面临的风险最大。当前服务业务账单增速为+18%，未达预期，而服务业务增速需加快约 2.5 个百分点，同时业务结构正转向附加率更低的交易。如果 2027 财年产品业务持平或下滑、服务业务维持在 12%至 13%左右，且毛利率和运营费用的有利因素逆转，则盈利预测可能下调。随着市场叙事从"AI 安全平台"转向"峰值后更新周期"，估值倍数也可能进一步向硬件密集型同行靠拢。
