Did you know Texas alone accounts for over a quarter of all U.S. data center capacity additions planned through 2030? That outsized footprint is exactly why recent talks of a datacenter moratorium in the Lone Star state sent shockwaves through the semiconductor market, dragging the SOX index down 31% since October. But before you write off the AI infrastructure boom, GIR Jim and the technology team suggest taking a deep breath.

你知道吗？仅德克萨斯州就占到了美国计划在 2030 年前新增的全部数据中心容量的四分之一以上？正是这种超大的规模，使得近期关于孤星州暂停数据中心建设的讨论在半导体市场引发了轩然大波，导致 SOX 指数自 10 月以来下跌了 31%。但在你否定 AI 基础设施热潮之前，GIR Jim 和科技团队建议你先深呼吸一下。

Where the street sees an impending cliff of land, power, and funding constraints, our GIR team sees an oversold market mispricing reality. The key divergence? While the broader market fears immediate construction halts, GIR Jim's bottom-up analysis shows that the 35 GW of datacenter additions slated for 2027 are largely already under construction and carry very low execution risk. Moratoriums typically target *new* permits, not active hardhat zones. Consequently, GIR forecasts a robust $1.3 trillion in AI infrastructure capex by 2027.

当市场看到土地、电力和资金限制这迫在眉睫的悬崖时，我们的 GIR 团队看到的却是一个低估现实超卖的市场。关键分歧在哪？虽然大市场担忧建设会立即叫停，但 GIR Jim 的自下而上分析表明，计划于 2027 年新增的 35 GW 数据中心大部分已处于建设中，且执行风险极低。暂停令通常针对的是新许可，而非正在施工的区域。因此，GIR 预测到 2027 年 AI 基础设施资本支出将达到稳健的 1.3 万亿美元。

With the index hitting near-record relative drawdowns, historical patterns suggest we are at a highly attractive entry point. Here is where we see the best actionable value:

随着指数创下接近历史新高的相对回撤，历史模式表明我们正处于极具吸引力的入场点。以下是我们认为最具操作价值的领域：

- **AI Compute:** Even in a highly unlikely "no growth" scenario for 2028, NVDA and AVGO are trading at a compelling 12x and 13x against baseline earnings. AMD also remains a highly attractive growth play.

  AI 计算：即使在 2028 年极不可能出现的“零增长”情景下，NVDA 和 AVGO 相对于基准盈利的市盈率仍仅为极具吸引力的 12 倍和 13 倍。AMD 也依然是一项极具吸引力的增长投资。

- **Semi-Cap Equipment:** The capacity coming online through 2028 is simply catching up to previous demand levels. AMAT and LRCX offer tremendous value today, trading at just 15x to 16x 2027 estimated EPS.

  半导体资本设备：到 2028 年投产的产能仅仅是在弥补此前需求水平的缺口。AMAT 和 LRCX 如今提供了巨大的价值，其基于 2027 年预估 EPS 的市盈率仅为 15 到 16 倍。

- **Memory:** History tells us memory stocks find their floor near tangible book value. GIR Giuni notes that global players like Samsung and SK Hynix are already trading below total book value, and Micron is rapidly approaching these oversold levels with strong free cash flow anticipated in the coming quarters.

  内存：历史表明，内存股的底部通常接近有形账面价值。GIR Giuni 指出，三星和 SK 海力士等全球厂商目前的交易价格已低于总账面价值，而美光正迅速逼近这些超卖水平，且预计未来几个季度将产生强劲的自由现金流。

The near-term tape might be choppy as year-end de-grossing continues, but for investors willing to look through the noise, the current risk/reward setup in select Semis is too compelling to ignore.

随着年末降杠杆操作继续，近期盘面可能震荡，但对于愿意看透噪音的投资者而言，精选半导体股当前的风险/收益配置极具吸引力，不容忽视。

Exhibit 1: Our bottom-up AI Infrastructure Capex build implies $1.3tn/$2tn in annual AI infrastructure spending on compute/networking in 2027/28

	2026	2027	2028
