TMTB Morning Wrap TMTB 早间总结

TMT BREAKOUT
JUST NOW • PAID

Good morning. **QQQs - 80bps** with more follow through to yesterday's price action as **Semis -4%** early with many names already down 5%+ as charts continue to break down (see our EOD wrap from yesterday for our thoughts). Rotations continuing early this morning as hyperscalers outperforming again (**AMZN +2**%). **Software -1%** after misses from **HUBS -9%** and **FIG -6%** have app sw weaker**,** while **Internet +1**% is the bright spot again. **U +20%** and **APP +23%** after both put up huge quarters and currently in a factor sweet spot. **COHR -3%** was decent but selling off with the rest of semis. **ARM -7.5%** another royalty miss despite increasing confidence in their over $2B #. **EXPE -7%** on a weaker Q4 guide.

早上好。QQQs -80bps，延续了昨日的价格走势，半导体板块早盘下跌 4%，许多个股已跌超 5%，图表形态持续破位（详见我们昨日的收盘总结）。今早板块轮动继续，超大规模云厂商再次跑赢大盘（AMZN +2%）。软件板块 -1%，受 HUBS -9%和 FIG -6%业绩不及预期影响，应用软件走弱，而互联网板块 +1% 再次成为亮点。U +20%和 APP +23%，两者均交出亮眼的季度业绩，且目前正处于因子的甜点区。COHR -3%业绩尚可，但随半导体板块整体遭抛售而走低。ARM -7.5%，尽管对其超 20 亿美元的目标数字信心增强，但特许权使用费再次不及预期。EXPE -7%，因 Q4 业绩指引疲软。

Asia mixed overnight: TPX +1.16%, NKY -1.79%, Hang Seng +3.67%, HSCEI +3.87%, SHCOMP +0.1%, Shenzhen +1.59%, Taiwan TAIEX -3.2%, **Korea KOSPI -5.28%.** Softbank/Sammy/Hynix all down 7-10%.

亚洲隔夜涨跌互现：TPX +1.16%，NKY -1.79%，恒生指数 +3.67%，国企指数 +3.87%，上证综指 +0.1%，深证成指 +1.59%，台湾加权指数 -3.2%，韩国 KOSPI -5.28%。软银/Sammy/海力士均下跌 7-10%。

We'll hit recaps from **APP, HUBS, ARM, EXPE**, and **FIG** then onto the usual.

我们将回顾 APP、HUBS、ARM、EXPE 和 FIG 的财报，然后进入常规内容。

Lots to get to, so lets get to it...

要聊的很多，我们直接开始吧.....

EARNINGS

APP 3Q26: Next-Gen Model, Only Partly Rolled Out, Re-Accelerates Gaming to ~50% and partially helps flip the Share-Loss Narrative

APP 3Q26：下一代模型仅部分推出，使游戏业务重新加速至 ~50%，并部分扭转了份额流失的叙事

Overall, a very solid print for what was a somewhat a crowded HF short coming into the print and a stock that has derated to a mid teens p/e multiple. Used to be LO darling but has been largely de-grossed — likely needs another good print to get its mojo back, but this was a good start.

总体而言，对于一只在财报前有些拥挤的对冲基金做空标的，以及一只市盈率已降至十几倍中段的股票来说，这是一份非常扎实的财报。它曾是做多基金的宠儿，但已被大幅降仓——可能还需要一份好财报才能重拾魔力，但这已是一个良好的开端。

Gaming, where bears saw share loss to U, was the bright spot. It grew nearly 50% y/y (their first gaming growth disclosure in a year) on a partial rollout of new ad models, driving most of the 3Q beat ($2.185B vs. ~$2.10-2.12B bogeys), first acceleration after four straight decels (although the 2 yr stack decel'd) and biggest beat vs. street since 1Q'25. The 4Q guide, counting only model gains already live, beat bogeys on revs ($2.38B mid vs. ~$2.33-2.36B) and EBITDA ($2.01B vs. ~$1.93-1.96B). Foroughi said share-loss checks "tend to end up being flawed" and called 2Q's miss "our own foot fault," but mgmt gave no take rate, gaming vs. consumer split, full-rollout timing or e-com revenue: "You sort of have to make your own guesses." Foroughi called the 3Q

model rollout “a model transition as significant as Axon 2.0,” and asked if it’s Axon 3.0, put it on that level “from a technology standpoint in terms of technical complexity.”

游戏业务是亮点，此前看空者曾认为其份额将流失至 U。得益于新广告模型的部分推出，该业务同比增长近 50%（这是他们一年来首次披露游戏业务增长），推动了三季度的大部分超预期表现（22.185 亿美元 vs. ~$2.10-2.12B 预期值），这也是连续四次减速后的首次加速（尽管两年复合增速仍放缓），且是一季度’25 以来相对市场预期的最大超预期幅度。四季度指引仅计入已上线的模型带来的增长，在营收（中值 23.8 亿美元 vs. ~$2.33-2.36B）和 EBITDA（20.1 亿美元 vs. ~$1.93-1.96B）上均超预期。Foroughi 表示，关于份额流失的核查“往往存在缺陷”，并将二季度的未达预期称为“我们自己的失误”，但管理层并未提供抽佣率、游戏与消费者业务的拆分、全面推出的时间表或电商收入：“你多少得靠自己去猜。” Foroughi 称 3Q 模型的推出是“一次与 Axon 2.0 同等重大的模型转型”，并问这是否就是 Axon 3.0，将其置于同一层级，“从技术角度而言，就技术复杂性来说”。

It’s “still in partial rollout,” the 4Q guide counts only gains “already live,” and there’s no timing on the full rollout.

它“仍处于部分推出阶段”，4Q 指南仅计入“已上线”的收益，且全面推出尚无时间表。

The nits are the 4Q guide’s +8-10% q/q (vs. +14% in 3Q), but their usual ~5.5% beat on the mid would take 4Q to ~+15% q/q. No 2027 number, but 2026 now tracks to ~$8.33B (nine months reported plus the 4Q guide), so Street’s ~$10.1B for 2027 assumes just +21% growth, well short of the “roughly 30%” a year Foroughi says the business can compound at long term. At 30%, 2027 revenue would be ~$10.8B. Overall, much better than feared after U/META share-loss scare, and the higher base de-risks 2027 and likely gets some nascent bulls back on board hoping for e-com to ramp and beats to continue in ‘27. Bulls will say APP can grow revenue ~30%+ in CY27 and deserves high teens CY27 EV/EBITDA which = ~$500+.

瑕疵在于第四季度指引的环比+8-10%（对比第三季度的+14%），但他们通常在中值基础上~5.5%的超预期幅度将使第四季度达到环比~+15%。没有 2027 年的数据，但 2026 年目前追踪至~$8.33B（已报告的九个月加上第四季度指引），因此华尔街对 2027 年~$10.1B 的预期仅假设了+21%的增长，远低于 Foroughi 所称该业务长期可达到的“大约 30%”的年复合增长率。按 30%计算，2027 年营收将为~$10.8B。总体而言，在 U/META 份额流失的恐慌之后，情况好于预期，更高的基数降低了 2027 年的风险，并可能让一些初露头角的看涨者重新入场，寄望于电商业务加速，且 2027 年继续超预期。看涨者会说 APP 在 2027 自然年可以实现营收~30%+的增长，并配得上 2027 自然年 EV/EBITDA 的高十几倍，这等于~$500+。

Key Takeaways

- **AI model.** The beat came from a partial rollout of the architecture mgmt only previewed on the 2Q call. The new models are bigger and trained on larger compute clusters. Mgmt now puts the architecture on par with Axon 2.0 in technical complexity. The biggest gains come where data is sparse: newer and smaller advertisers and new categories, which is where consumer sits. Mgmt won’t commit to a full-rollout date or a pace of gains. It does say the new generation has “a lot more room to optimize” and a “much longer roadmap,” and could eventually extend across media and client types (gaming and consumer models are separate today). The uplift came with no new data added to the system, so feeding in more data is a second lever still ahead.

  AI 模型。业绩的超预期表现源于仅在二季度电话会议上预览过的架构的部分推出。新模型规模更大，并在更大的计算集群上完成训练。管理层现在认为该架构在技术复杂度上已与 Axon 2.0 不相上下。最大的提升出现在数据稀疏的领域：较新和较小的广告主以及新类别，这也是消费者业务所在的领域。管理层不愿承诺全面推出的日期或提升的步伐。但其确实表示，新一代架构有“大得多的优化空间”和“长得多的路线图”，并最终可能扩展至各类媒体和客户类型（目前游戏和消费者模型是分开的）。此次提升并未向系统中添加任何新数据，因此引入更多数据是未来可用的第二个杠杆。

- **Gaming.** Gaming grew nearly 50% y/y, re-accelerating alongside the rollout, and drove most of the ~$100M beat vs. the high end. Mgmt now says gaming could grow faster than its earlier framing over the long term (quote #2). The category looks healthy. MAX supply is still growing at a “very strong double-digit” annual rate, vs. low double digits or single digits for most ad markets. Mgmt also says weak App Store in-app purchase data misses payments that have moved off-platform. Supply costs are rising as publishers monetize better, so APP has to

keep improving its tech faster than market pricing rises to grow faster than MAX.

游戏。游戏业务同比增长近 50%，随着产品的推出重新加速，并推动了 ~$100M 超出预期上限的大部分幅度。管理层现在表示，从长期来看，游戏的增长速度可能会快于其早先的设定（引文 #2）。该品类看起来状况良好。MAX 供应量仍以“非常强劲的两位数”年增长率增长，而大多数广告市场的年增长率仅为低两位数或个位数。管理层还表示，疲软的 App Store 应用内购买数据遗漏了已转移至平台外的支付。随着发布商变现能力增强，供应成本正在上升，因此 APP 必须以快于市场定价上涨的速度持续提升其技术，才能实现快于 MAX 的增长。

- **Callback.** The key nuance was the scope and cost of the rollout. It covers “parts of traffic, parts of the system.” Mgmt declined to size what remains and cautioned that the impact may not scale linearly. APP is already “well over” its original three-year $1.3B cloud commitment ($1.1B paid through 3Q) and is still adding capacity, yet mgmt does not expect margin compression. Its reasons:

  回调。关键的细微差别在于推出的范围和成本。它覆盖了“部分流量，部分系统”。管理层拒绝量化剩余部分的规模，并提醒影响可能不会呈线性增长。APP 已经“远超”其最初三年 13 亿美元的云承诺（截至第三季度已支付 11 亿美元），并且仍在增加容量，然而管理层预计不会出现利润率压缩。其原因：

  - Training cost doesn’t scale linearly with revenue; most compute goes to serving ads.

    训练成本与收入不成线性关系；大部分算力用于广告投放。

  - After the 2Q surprise, APP split model development from serving and added spending controls on large training runs.

    在二季度的意外之后，APP 将模型开发与投放分离，并对大型训练运行增加了支出控制。

  - Any future step-up in compute that pressures margins would show up in guidance.

    任何未来给利润率带来压力的算力提升，都将反映在业绩指引中。

Mgmt also gave its clearest explanation of why channel checks missed. APP can lose share of wallet on lower-value impressions while conversion and pricing gains elsewhere more than offset that, and checks can’t see the offset.

管理层也最清晰地解释了为何渠道调研会出现偏差。APP 可能会在低价值展示上失去钱包份额，而其他方面的转化率和定价收益足以弥补这一损失，但调研无法看到这种弥补。

- **Competition.** Mgmt called 2Q “our own foot fault.” It noted that several competitors grew in the same quarter APP posted its biggest result (“not zero sum”). It dismissed negative channel checks as sampling a small sub-segment whose respondents “probably aren’t working that hard.” On pricing, CPMs rise as targeting improves, but mgmt says advertiser ROAS is higher than three years ago on far larger spend. APP doesn’t manage to or disclose a take rate, and conversion is “a little bit over 1%.” Mgmt framed take rate as rising when APP out-innovates the market, holding when it keeps pace and shrinking when it falls behind. That is the cleanest explanation yet of the 2Q air pocket. Mgmt also stressed that MAX gives Axon only win/loss and clearing-price data, never what competitors serve. On the callback, it said it doesn’t view the dispute with U over data collection as material to the P&L.

竞争。管理层称二季度为“我们自己的发球失误”。其指出，在 APP 公布最大业绩的同一季度，数家竞争对手也实现了增长（“并非零和博弈”）。其将负面的渠道调研斥为仅对小部分细分群体抽样，且受访者“可能没那么努力工作”。在定价方面，随着定向能力提升 CPM 也会上升，但管理层表示，在支出规模大得多的情况下，广告主的 ROAS 仍高于三年前。APP 不按抽成率进行管理或披露，转化率“略高于 1%”。管理层将抽成率描述为：当 APP 创新超越市场时上升，当其保持同步时持平，当其落后时萎缩。这是迄今为止对二季度增长断档最清晰的解释。管理层还强调，MAX 仅向 Axon 提供胜/败和清算价格数据，绝不提供竞争对手投放的内容。 在回调中，它表示不认为与 U 在数据收集上的争议对损益有重大影响。

- **Consumer.** Advertiser spend grew double digits q/q and triple digits y/y heading into the Q4 peak. Street estimates put consumer at ~$250M of 3Q revenue, ~12% of the total. In 2Q, spend had already exited 28% above 4Q25’s seasonal peak. Mgmt says new-customer acquisition is accelerating. It cautioned, however, that APAC-led pixel growth partly reflects merchants spinning up product-specific sites just for APP. Success still skews to mid-market advertisers who are either sophisticated or supported by APP’s team. Fully self-serve SMB is “further into the future,” and the partnership channel is “still a work in progress.” Mgmt softened its tone on creative, from “the biggest hurdle in our system” last quarter to “I wouldn’t call it a barrier.” It conceded that gen-AI video tools have lagged

because Western LLM labs are “focused on something else.” New formats such as dynamic product ads are the workaround for now.

消费者。广告主支出在进入第四季度旺季前实现了环比两位数和同比三位数的增长。市场普遍预计消费者业务将为第三季度贡献约 2.5 亿美元收入，约占总收入的 12%。在第二季度，支出已比 2025 年第四季度的季节性峰值高出 28%。管理层表示，新客户获取正在加速。不过，管理层也提醒，由亚太地区（APAC）带动的像素增长部分反映了商家仅为 APP（应用推广）搭建特定产品站点。成功案例仍主要集中在中端市场广告主，他们要么较为成熟，要么得到了 APP 团队的支持。完全自助服务的中小企业（SMB）“尚需时日”，而合作伙伴渠道则“仍在推进中”。管理层在创意方面的口吻有所软化，从上季度的“我们系统中最大的障碍”转变为“我不认为这是一种障碍”。 它承认生成式 AI 视频工具已经落后，因为西方的 LLM 实验室“专注于其他事情”。诸如动态产品广告等新格式是目前权宜之计。

On the callback, mgmt said there will be no added consumer disclosure for the foreseeable future.

在回调会议上，管理层表示在可预见的未来不会增加消费者披露。

- **Guide.** The 4Q revenue midpoint of $2.38B (+43.6% y/y, +8–10% q/q) is ~5% above Street. The adj. EBITDA midpoint of $2.01B (~84.5% margin) is ~6.5% above. Together they imply FY26 revenue growth of ~52% and adj. EBITDA growth of ~56%. The guidance approach is unchanged: it covers normal seasonality, consumer scaling, model gains already live and higher training compute, with no credit for the part of the rollout not yet released. Some on the buyside see +8–10% q/q as light for the seasonal peak. It is below both 3Q’s +13.6% and last year’s 4Q guide of +12–14%, whiber (callback).

指引。第四季度收入中位数为 23.8 亿美元（同比增长 43.6%，环比增长 8–10%），比市场预期高出~5%。调整后 EBITDA 中位数为 20.1 亿美元（利润率约 84.5%），高出~6.5%。两者共同意味着 2026 财年收入增长~52%，调整后 EBITDA 增长~56%。指引方式保持不变：涵盖正常的季节性、消费者规模扩张、已上线的模型收益以及更高的训练算力，未计入尚未发布的部分推出内容。部分买方人士认为，对于季节性高峰而言，8–10%的环比增长偏保守。这低于第三季度的 13.6%以及去年第四季度 12–14%的指引（该季度实际增长为 18%）。据管理层统计，在过去 16 个季度中，APP 有 14 个季度的业绩超出指引上限。 若业绩与去年同期的 1005#3.6% 持平，则第四季度将接近 24.8 亿美元（环比增长约 14%）。由于假日预算从 11 月中旬开始逐步增加（回调），目前第四季度至今的数据尚为时过早，无法解读。

- **Margins.** Adj. EBITDA margin of 84.3% was ~90bps above Street and above the ~83% the guide implied, on 87% q/q flow-through (70% in 2Q). GAAP gross margin rose ~70bps q/q to 89.0%. Cheaper model serving pushed data center costs down as a % of revenue even as training compute rose. That reverses 2Q, when compute costs pushed adj. EBITDA below the guide range. Mgmt manages to EBITDA dollars and FCF rather than margin %, and says every dollar of compute is “gated on return.” The 4Q guide implies ~84.5%, above the low-80% long-term framework mgmt gave last quarter.

  利润率。调整后 EBITDA 利润率为 84.3%，比 Street 高出 ~90bps，也高于指引隐含的 ~83%，季度环比转化率为 87%（第二季度为 70%）。GAAP 毛利率季度环比上升 ~70bps，至 89.0%。尽管训练计算有所增加，但更低的模型推理成本推动数据中心成本占收入的比例下降。这与第二季度相反，当时计算成本导致调整后 EBITDA 低于指引区间。管理层以 EBITDA 绝对金额和自由现金流（FCF）而非利润率百分比来管理，并表示每一美元的计算支出都“以回报为门槛”。第四季度指引隐含 ~84.5%，高于管理层上季度给出的长期框架中的 80% 出头。

- **CTV.** Pilot campaigns are live and the product is “looking very promising.” Mgmt said not to “bank on it at all” for near-term numbers. That is a clear shift from 2Q, when CTV came last in the supply roadmap (after non-gaming apps and the open web) and was gated on having excess consumer budgets. On the callback, mgmt cited improving attribution and early signs of incrementality, with a potential unlock next year. Mgmt sees CTV as a rare supply source that could move the needle, because no true top-to-bottom-funnel performance offering exists there. It compared CTV to mobile 10–15 years ago.

CTV。试点营销活动已上线，且该产品“看起来非常有前景”。管理层表示，对于短期数据“完全不要指望它”。这与二季度相比是一个明显的转变，当时 CTV 在供应路线图中排在最后（位于非游戏应用和开放网络之后），并且受制于是否有剩余的消费者预算。在后续电话会议上，管理层提到了归因能力的改善和增量性的早期迹象，明年可能会迎来释放。管理层将 CTV 视为一种能够产生实质性影响的稀缺供应源，因为该领域目前尚不存在真正的从漏斗顶部到底部的全漏斗效果型产品。它将 CTV 与 10 到 15 年前的移动端进行了比较。

Bull vs. Bear Debate 多空辩论

The bull thesis is that APP is the best-executing AI performance-ad engine outside the walled gardens, and that its economics compound with every model improvement. Better predictions lift advertiser ROAS, budgets step up at the same ROAS targets, and APP keeps a larger share of the value created. Supply is not a ceiling, because MAX inventory is still growing at a strong double-digit rate. Bulls see three long-duration drivers. First, gaming still has large conversion headroom: conversion is only ~1.3%, and sustaining even ~20bps of annual improvement could put revenue ~15% above Street by 2030. Second, consumer expands the addressable market rather than standing alone. It is already a ~$1B run-rate business growing triple digits, and every new advertiser adds data that improves the model. Because gaming and commerce bid in the same auction, commerce demand lifts the value of lower-value impressions, and showing users a more varied mix of ads improves gaming conversion.

多头论点认为，APP 是围墙花园之外执行力最强的 AI 性能广告引擎，其经济效益随每一次模型改进而复合增长。更精准的预测能提升广告主 ROAS，在相同 ROAS 目标下预算会随之增加，而 APP 能保留更大份额的创造价值。库存并非天花板，因为 MAX 库存仍以强劲的双位数增长。多头看到三大长期驱动力。首先，游戏仍有巨大的转化提升空间：转化率仅为 ~1.3%，若能维持每年 ~20bps 的改善，到 2030 年营收可能比市场预期高出 ~15%。其次，消费者业务拓展了可触达市场，而非孤立存在。 它已经是一家年化收入达 ~$1B、以三位数增长的业务，每一位新广告主都会带来数据，从而改进模型。 由于游戏和电商在同一个竞价池中出价，电商需求提升了低价值展示的价值，而向用户展示更多样化的广告组合则能提高游戏转化率。

Third, there is optionality the Street doesn’t model: CTV, non-gaming apps and the open web, MoPub-style acquisitions of data and customers, and a shift of performance ad dollars from the mobile web into full-screen in-app ads that average

35-plus seconds of watch time. The durable advantages are scale (the largest feedback loop in mobile user acquisition), MAX's position as the neutral mediation layer that pays publishers the most, and engineering talent density that has historically put APP "many quarters or years ahead" on breakthroughs. Underneath it all is an 84%-margin, capital-light model that converts ~60–65% of revenue to FCF.

第三，华尔街尚未建模的潜在选项包括：CTV、非游戏类应用和开放网络，MoPub 式的数据与客户收购，以及效果广告支出从移动网页向全屏应用内广告的转移，这些广告平均观看时长超过 35 秒。其持久优势在于规模（移动用户获取领域最大的反馈闭环）、MAX 作为向发布方支付最多费用的中立中介层的地位，以及工程人才密度，这曾让 APP 在突破性进展上"领先许多季度或数年"。这一切的基础是一个利润率为 84%、轻资本的商业模式，能将约 60–65% 的收入转化为自由现金流。

This quarter ticked nearly every bull box. The 2Q air pocket proved to be timing rather than a structural problem. A partial rollout of an architecture mgmt compares to Axon 2.0, the transition behind two years of ~70%+ ad revenue growth, re-accelerated gaming to ~50% y/y. It produced APP's largest-ever sequential dollar add with no new data in the system, and it did so while several competitors were also growing, which undercuts the view that share gains are zero-sum. Mgmt raised its gaming growth ceiling for the first time. Because the 4Q guide gives no credit for the unreleased part of the rollout, estimate revisions should keep coming. FY27 Street revenue has moved from ~$10.1–10.2B pre-print to ~$10.5B (+~26%), and bulls think the full rollout plus consumer makes 30%+ achievable. On margins, 87% flow-through with data center costs falling as a % of revenue shows compute can scale without breaking the model, so each $1B of revenue upside adds roughly $0.85B of EBITDA.

本季度几乎满足了所有看多条件。二季度的增长断层被证明只是时机问题，而非结构性问题。架构的部分推出被管理层比作 Axon 2.0，这一转型支撑了过去两年 ~70%+ 的广告收入增长，并使游戏业务重新加速至同比增长 ~50%。这带来了 APP 史上最大的环比绝对额增量，而系统内并无新数据加入；且在此期间，多家竞争对手同样在增长，这削弱了市场份额获取是零和博弈的观点。管理层首次上调了其游戏业务的增长上限。由于四季度指引并未将此次推出中未发布部分的贡献计入，盈利预测的修正应会持续进行。 FY27 Street 营收已从印刷前的~$10.1–10.2B 变动至~$10.5B（+约 26%），多头认为全面推广加上消费者业务可使 30%+的目标得以实现。在利润率方面，87%的转化率加上数据中心成本占营收比例的下降，表明算力可以规模化扩展而不会破坏模型，因此每增加$1B 的营收上行空间，大致可增加$0.85B 的 EBITDA。

Even after the after-hours move, APP trades at ~12.5x FY27 EBITDA, ~16x FY27 EPS and a ~6% FY27 FCF yield. That compares with a four-year average of ~18x NTM EBITDA, 35x+ a year ago, and ~21–22x where U and RDDT trade today. Buybacks are running at ~5% of market cap a year at the 3Q pace. If APP's data-collection claims against U hold up, U's recent momentum could prove short-lived. With the quarter rebuilding credibility on execution, bulls see a path back toward the historical average multiple as APP strings together beats through the full rollout.

即便在盘后波动之后，APP 的交易价格仍为 ~12.5 倍 FY27 EBITDA、~16 倍 FY27 EPS 以及 ~6% 的 FY27 自由现金流收益率。相比之下，其四年平均值为 ~18 倍 NTM EBITDA，一年前为 35 倍以上，而 U 和 RDDT 目前的交易价格分别为 ~21–22 倍。按三季度节奏，回购规模约为 ~市值的 5%/年。如果 APP 针对 U 的数据收集指控站得住脚，U 近期的势头可能只是昙花一现。随着本季度在执行力上重建信誉，随着 APP 在全面推广中持续超预期，多头认为其估值倍率有望重回历史平均水平。

The bear thesis is that APP is a phenomenal business that is fundamentally hard to forecast, and so deserves a discounted multiple. Growth depends on lumpy R&D breakthroughs that mgmt explicitly won't put on a schedule. Disclosure is thin: no gaming/consumer split, no take rate and no added consumer KPIs. And 2Q showed that a single quarter without model lift can take ~20% off the stock in a day. Gaming is fully penetrated ("We have every mobile gaming company live probably"), so growth depends on capturing more of advertisers' value, which is exactly what competitors are going after. U's Vector-led Strategic Grow revenue is growign 125%. . LFTO and Moloco are scaling their own machine-learning stacks, and Google is entrenched on Android. On the callback, mgmt itself acknowledged APP is losing share of wallet on lower-value impressions. Mgmt also says take rate shrinks if APP stops out-innovating market pricing.

看空逻辑认为，APP 是一家极好的企业，但本质上难以预测，因此应给予折价乘数。增长依赖于不规律的研发突破，而管理层明确表示不会为此设定时间表。信息披露单薄：没有游戏/消费者业务拆分，没有抽成率，也没有新增的消费者 KPI。而且二季度表明，单单一个没有模型提升的季度，就能在一天内让股价下跌 ~20%。游戏业务已完全渗透（“我们可能已经让每一家移动游戏公司都上线了”），因此增长取决于能否获取广告主更多的价值，而这恰恰是竞争对手正在争夺的。U 的由 Vector 主导的战略增长业务收入正增长 125%。LFTO 和 Moloco 正在扩展他们自己的机器学习技术栈，而谷歌则在安卓系统中根深蒂固。 在回调中，管理层自身也承认，APP 在低价值展示上的钱包份额正在流失。管理层还表示，如果 APP 停止在市场定价上保持创新领先，抽成率将会缩水。

And because commerce and gaming bid in the same auction, e-commerce bidders can push marginal gaming advertisers toward cheaper networks.

并且由于电商和游戏在同一竞价中出价，电商出价方会将边际的游戏广告主推向更廉价的网络。

Bears think the bull case leans too hard on two assumptions. The first is that this architecture compounds for years the way Axon 2.0 did; competitors have since rebuilt their stacks, so APP’s lead may be shorter this time. The second is that consumer can keep roughly doubling. A couple of years in, it is ~12% of revenue, success still depends on hand-holding and creative investment, and self-serve SMB is years away. Growth also skews to APAC merchants sourcing from the Asian supply chain, a trade-policy exposure mgmt did not address.

看空者认为，看多逻辑过于依赖两个假设。第一是该架构能像 Axon 2.0 那样复利增长数年；竞争对手此后已重建了他们的技术栈，因此这次 APP 的领先优势可能更短。第二是消费者业务能保持大致翻倍。几年过去了，它占收入的 ~12%，成功依然依赖于手把手扶持和创造性投资，而自助式 SMB 还需数年时间。增长也偏向于从亚洲供应链采购的 APAC 商家，这是一种管理层未予置评的贸易政策风险敞口。

This quarter gave bears more than the after-hours move suggests. The 4Q guide implies only +8–10% q/q in the seasonally strongest quarter, below last year’s +12–14% guide, with y/y growth slowing to ~44% at the midpoint. Even a typical ~3–4% beat leaves two-year stacked growth (~+148%) slower than 3Q’s (~+162%). Mgmt also flagged a new seasonality headwind (quote #3), which makes the February 1Q27 guide the next pressure point. FCF conversion guidance slipped, 3Q FCF was slightly below Street, and conversion is structurally lower than in FY25 as cash taxes rise, so

FCF per share will lag EBITDA. Investment gains also flattered the GAAP EPS beat. On costs, APP is already well over its cloud commitment and still adding capacity, mgmt says the models will be “starved for data,” and the callback flagged that a future step-up in compute could pressure margins. Bears therefore see margin risk, plus the chance of a large data acquisition as APP reaches for growth.

本季度给空头提供的利好比盘后走势所暗示的更多。4Q 指引暗示在季节性最强的季度仅环比+8–10%，低于去年+12–14%的指引，同比增速在中位数放缓至~44%。即使达到典型的~3–4%超预期幅度，两年叠加增速（约+148%）仍慢于 3Q（约+162%）。管理层还指出了新的季节性逆风（引文#3），这使得 2 月 1Q27 的指引成为下一个压力点。FCF 转化率指引下滑，3Q FCF 略低于市场预期，且随着现金税增加，转化率在结构上低于 FY25，因此每股 FCF 将落后于 EBITDA。投资收益也粉饰了 GAAP EPS 的超预期表现。 在成本方面，APP 已远超其云服务承诺并仍在增加产能，管理层表示模型将“面临数据匮乏”，且回调提示未来算力的进一步提升可能会对利润率造成压力。因此，看空者看到了利润率风险，以及 APP 在寻求增长时进行大规模数据收购的可能性。

HUBS -8%: Q4 Guide Steps Down to 12% CC and Net New ARR Is Now Declining, Pushing FY27 Toward ~11% and feeding the AI loser bear case

HUBS -8%：Q4 指引下滑至 12% CC，且净新增 ARR 现已开始下降，推动 FY27 趋向~11%，并助长了 AI 输家的看空逻辑

Not the print bulls wanted, even though there weren’t many bulls lef theading into the print. Mgmt didn’t do themselves any favors on the call and 4Q guide is feeding the AI loser bear case. 3Q was largely ok and grew 17% cc, beating the ~15.5-16% bogeys, but the 4Q guide of 12% missed the ~14.5-15%, which mgmt put on AI changing how customers find and buy software. KPIs got cut too: the CFO now sees FY NRR down ~2pts, net new ARR down y/y and 4Q net adds “below the 5,000 level”. Mgmt all but told the Street to anchor 2027 on the ~12% exit, so FY27 revenue is resetting from ~+14% to ~+10–11% Asked if 2027 starts at 12%, CFO said the headwinds “will continue in Q4 and into 2027”; mgmt wouldn’t say if trends stabilized, give a 2027 number before February or date its lower-ASP seats-plus-credits pricing beyond new EMEA customers.

并非多头所期望的财报表现，尽管在财报发布前已没剩多少多头了。管理层在电话会议上也没帮上什么忙，而四季度指引正助长 AI 输家空头逻辑。三季度大体尚可，同比增长 17%（恒定汇率），超过了~15.5-16%的目标值，但 12%的四季度指引未达~14.5-15%的预期，管理层将其归因于 AI 改变了客户发现和购买软件的方式。关键指标也遭下调：CFO 目前预计全年 NRR 下降~2 个百分点，净新增 ARR 同比下降，且四季度净增量“低于 5,000 的水平”。 管理层几乎告诉华尔街将 2027 年预期锚定在 ~12% 的退出水平上，因此 FY27 收入预期从 ~+14% 重置为 ~+10–11%。当被问及 2027 年是否以 12% 开局时，CFO 表示逆风“将在第四季度持续并延续至 2027 年”；管理层不愿表示趋势是否已企稳，不愿在 2 月之前给出 2027 年的具体数字，也不愿说明其低 ASP 的席位加积分定价模式在新 EMEA 客户之外的具体适用时间。

On AI disruption, its LLM connector users show 13pts higher gross retention, but the CEO called the connectors a “nascent” lead source that doesn’t yet offset weaker inbound. Overall, worse than feared even after the four October sell-side downgrades and everyone hating it to put it lightly, with 2027 growth now pointing below the well below ~13% bar.

关于 AI 颠覆，其 LLM 连接器用户的毛留存率高出 13 个百分点，但 CEO 称连接器是一个“尚处于萌芽期”的线索来源，尚不足以抵消入站线索的疲软。总体而言，情况比担心的还要糟糕，即使经历了 10 月份的四次卖方下调，且坦白说大家都讨厌它，目前 2027 年的增长预期甚至指向远低于 ~13% 的门槛。

Key Takeaways

- **Demand.** The two headwinds first flagged in Q2 (customers want proof that AI works in their own environment before buying; tighter budgets plus AI changing how buyers discover software) “became more pronounced” in Q3, and commentary implies trends weakened into quarter-end. Agent trials grew 64% q/q, but conversion needs partner and solution-consultant hand-holding, which lengthens cycles. At Goldman in September mgmt framed this as a normal platform-shift adoption curve; now it says this “is not going to be a single quarter or a two-quarter transformation.”

需求。第二季度首次指出的两大逆风（客户在购买前希望证明 AI 在其自身环境中有效；预算趋紧，加上 AI 改变了买家发现软件的方式）在第三季度“变得更加明显”，评论暗示趋势在季度末进一步走弱。Agent 试用量环比增长 64%，但转化需要合作伙伴和解决方案顾问的全程支持，这延长了销售周期。9 月在 Goldman，管理层将其描述为正常的平台转型采用曲线；现在则表示这“不会是一个季度或两个季度的转型。”

- **Callback.** Callbacks were downbeat. Mgmt put the downmarket at the center of the slowdown, with Google’s shift to AI Mode disrupting the inbound, product-led funnel faster than AEO, LLM connectors and social can make up for it. Mgmt was candid that it has not decided how broadly to roll out the new pricing (Q4 is the first scaled pilot read), declined to size the NNARR decline, said Q4 NRR steps down from Q3, flagged FY27 GM pressure and, on 2027, pointed back to the 12% Q4 exit, declining NNARR and lower NRR as the starting point.

回调。回调情绪低迷。管理层将下行市场置于放缓的核心，指出谷歌向 AI 模式的转变正在破坏入站的产品主导型漏斗，且其速度超过了 AEO、LLM 连接器和社会化流量所能弥补的程度。管理层坦承尚未决定多大范围推广新定价（Q4 是首次规模化试点的读数），拒绝量化 NNARR 的降幅，表示 Q4 的 NRR 较 Q3 下降，提示了 FY27 的 GM 压力，并且对于 2027 年，再次指向 12%的 Q4 期末值、下降的 NNARR 和较低的 NRR 作为起点。

- **Downmarket.** Net adds of 5,258 missed Street (~5,750) and landed at the low end of the 5–6K guide (~7.0K in Q2, 10.9K a year ago), the lowest since 1Q20, and mgmt pulled the Q4 net-add guide, saying only “below” ~5K (Street ~5.8K) vs. a 9–10K quarterly pace entering 2026. Mgmt conceded that new top-of-funnel channels (intent-based marketing, LLM connectors, AEO) “don’t really meet” the decline in inbound demand, and that downmarket buyers are more price sensitive because “AI is a new line item.” The relaunched Starter (self-updating CRM, agentic onboarding) and the pricing pilot are the fixes, but mgmt said they will “take time.”

低端市场。净增 5,258 不及华尔街预期（约 5,750），并处于 5–6K 指引的低端（Q2 约为 7.0K，一年前为 10.9K），为 1Q20 以来最低，且管理层撤回了 Q4 净增指引，仅表示“低于”~5K（华尔街预期~5.8K），而进入 2026 年的季度增速原本为 9–10K。管理层承认，新的漏斗顶部渠道（基于意图的营销、LLM 连接器、AEO）“并不能真正弥补”入站需求的下降，且低端市场买家对价格更敏感，因为“AI 是一项新的预算科目”。重新推出的 Starter 版（自动更新的 CRM、代理式引导）和定价试点是应对之策，但管理层表示这些“需要时间”。

- **Upmarket.** The expected offset slowed sharply: $120K+ ARR deals grew 19% y/y vs. 38% in Q2, as larger buying committees with CEO, CTO and board involvement stretch cycles. Mgmt cited ~3x higher win rates when it engages multiple stakeholders on deals with 5+ committee members and has merged Sales and CS upmarket to smooth the path from trial to first AI use case to expansion. Multi-hub lands held up (62% of new Pro+ customers, +2pts y/y) and active core seats grew 34%.

  高端市场。预期的放缓显著加剧：ARR 超 12 万美元的交易同比增长 19%，而第二季度为 38%，原因是 CEO、CTO 和董事会参与的大型采购委员会拉长了周期。管理层指出，当其在拥有 5 名以上委员会成员的交易中与多个利益相关者互动时，赢单率高出~3 倍，并且已在高端市场合并销售与客户成功（CS）部门，以理顺从试用到首个 AI 用例再到扩展的路径。多中心落地保持稳健（占新增 Pro+客户的 62%，同比增加 2 个百分点），核心活跃席位增长 34%。

- **NRR.** NRR fell to 101% (-1pt q/q, -2pts y/y) vs. Street ~103%, and FY26 NRR is now guided down ~2pts (~101.5% vs. ~103.5%), the second cut this year after starting 2026 at “up a couple of points” and moving to ~flat in August. That implies Q4 NRR near 100% vs. the usual seasonal uptick, raising the risk of sub-100% in 1H27. Gross dollar retention is stable in the high 80s, so this is an upsell problem: core and persona seat upgrades remain a tailwind but are “now being more than offset” by weaker cross-sell, contact-tier and edition upgrades and cost optimization at renewal; ASRPC of $12,038 (+4% cc vs. Street $11,856; +2% cc last q) was flattered by fewer small Starter adds.

  NRR。NRR 降至 101%（环比下降 1 个百分点，同比下降 2 个百分点），而市场预期为 103%；FY26 NRR 现已下调至约 101.5%（此前为 103.5%），这是今年第二次下调——此前 2026 年初的指引为“上升几个百分点”，8 月调整为持平。这意味着 Q4 NRR 接近 100%，而非通常的季节性上升，增加了 2027 年上半年低于 100% 的风险。总金额留存率稳定在 80% 多的高位，因此这是一个增销问题：核心和按角色席位升级仍是顺风，但现在被交叉销售疲软、联系层级和版本升级乏力以及续约时的成本优化“完全抵消”；ASRPC 为 12,038 美元（固定汇率增长 4%，市场预期为 11,856 美元；上季度固定汇率增长 2%）受小型 Starter 版本新增减少而显得虚高。

- **NNARR.** Mgmt now expects FY26 net new ARR to decline y/y, the second reset this year: HUBS entered 2026 expecting NNARR to outpace cc revenue growth and in August cut that to growing below it. For the full year to decline, 2H NNARR has to be down meaningfully more, and mgmt declined to size it before February.

The pricing pilots are too small to explain the drop; it reflects demand, with lower sales productivity after the spring credits retraining also a drag.

NNARR。管理层目前预计 FY26 净新增 ARR 将同比下降，这是今年的第二次重置：HUBS 进入 2026 年时期望 NNARR 增速超过按固定汇率计算的收入增长，并在 8 月将其下调至低于该增速。若要实现全年下降，下半年的 NNARR 必须出现更显著的下滑，且管理层拒绝在 2 月之前量化其幅度。定价试点规模太小，无法解释这一降幅；这反映了需求状况，春季积分再培训后的销售生产力下降也是拖累因素。

- **Pricing.** The seats-and-credits pilot (Nordics since April, Benelux since June) expanded to all new EMEA customers in October: hubs are replaced by a single go-to-market seat, the Starter-to-Pro price jump shrinks in Marketing, Content and Data Hub, and all usage-based features move into credits. The first quantification shows lower ASPs but more Pro+ customers, 2–3x higher credit consumption and “stronger new ARR” vs. non-pilot regions. There is no timeline for a global rollout or installed-base migration (more in February), though existing customers can already swap seats for credits; mgmt frames it as a replay of the 2024 seat changes (ASP down first, then bigger and stickier cohorts), while bears read it as an effective price cut that signals competitive pressure.

定价。席位与额度试点（北欧地区自 4 月起，比荷卢自 6 月起）于 10 月扩展至所有新的 EMEA 客户：枢纽被单一的市场进入席位取代，Marketing、Content 和 Data Hub 中从 Starter 到 Pro 的价格涨幅缩小，所有基于用量的功能移入额度。首次量化显示 ASP 较低但 Pro+客户更多，额度消耗高出 2–3 倍，且“新增 ARR 更强”，对比非试点地区。暂无全球推广或存量迁移的时间表（2 月会有更多信息），不过现有客户已可将席位换为额度；管理层将其视为 2024 年席位调整的重演（ASP 先降，随后是更大且更粘性的客户群），而空头则将其解读为有效降价，并暗示竞争压力。

- **AI.** Usage keeps building: 64% of Pro+ customers use AI features, 20% use HUBS agents (+11pts YTD, but only +1pt vs. 19% in August), Breeze Assistant reach is 61% (+24pts YTD vs. 57% in August) with CSAT at 69%, monthly agentic actions are 5x since January (vs. ~3x at Goldman in September), credit consumption is ~2.5x, and Pro+ customers have deployed 5,600+ custom agents since July (vs. 3,000+ at Analyst Day). Data Agent plus Prospecting Agent with intent signals, and Customer Agent (2M+ support issues resolved in Q3), show the clearest ROI. The gap is monetization: credits are not yet moving NRR or NNARR, and AI revenue contribution remains small.

AI. 使用量持续攀升：64%的 Pro+客户使用 AI 功能，20%使用 HUBS 代理（年初至今+11 个百分点，但较 8 月的 19%仅+1 个百分点），Breeze Assistant 覆盖率达 61%（年初至今+24 个百分点，较 8 月的 57%），CSAT 为 69%，自 1 月以来月度代理操作量增长 5 倍（相比之下，9 月高盛的数据为~3 倍），额度消耗为~2.5 倍，且 Pro+客户自 7 月以来已部署 5,600 多个自定义代理（相比之下，分析师日为 3,000 多个）。数据代理与带有意向信号的潜在客户代理，以及客户代理（第三季度解决了 200 万+支持问题），展现出了最清晰的 ROI。差距在于变现：额度尚未拉动 NRR 或 NNARR，且 AI 收入贡献依然很小。

- **Headless.** Customers created 22M CRM objects through LLM connectors in Q3 (+157% q/q), and connector users show 13pts higher GRR (vs. ~12pts cited in September) and upgrade paid seats at 3x the rate of non-users. HUBS says it is the most popular CRM connector on both ChatGPT and Claude, which is mgmt's best evidence that headless use is additive rather than disintermediating. Monetization is early: only the Data API is monetized today (usage above "human" thresholds), with Context and Work APIs not yet priced.

无头化。Q3 客户通过 LLM 连接器创建了 2200 万个 CRM 对象（环比增长+157%），连接器用户的 GRR 高出 13 个百分点（对比 9 月份引用的~12pts），且升级付费席位的速率是非用户的 3 倍。HUBS 表示它是 ChatGPT 和 Claude 上最受欢迎的 CRM 连接器，这是管理层证明无头化使用是增量而非去中介化的最佳证据。变现尚处早期：目前仅 Data API 已变现（使用量超过"人类"阈值），Context 和 Work API 尚未定价。

- **Competition.** Mgmt said elongated cycles are not competition-driven, upmarket deals face the same competitors and are not falling out of the pipeline, and bigger committees are lengthening cycles rather than driving losses. Downmarket, customers are experimenting with AI tools and capping spend across experiments. Mgmt did not call out any specific competitor or rival pricing, but the Starter-to-Pro price compression, rising competition from AI start-ups and native AI tools downmarket, and checks suggesting HUBS' AI products lag peers in adoption keep the debate open.

竞争。管理层表示周期延长并非由竞争驱动，高端市场交易面临同样的竞争对手且并未从漏斗中流失，更大的决策委员会延长了周期而非导致丢单。在低端市场，客户正在尝试各类 AI 工具，并限制各项实验的支出总额。管理层未点名任何特定竞争对手或竞对定价，但 Starter 至 Pro 版本的价格挤压、低端市场来自 AI 初创公司和原生 AI 工具的竞争加剧，以及渠道反馈表明 HUBS 的 AI 产品在采用率上落后于同业，这些因素使得相关争议依然存在。

- **Margins.** Non-GAAP OM of 22.6% (+270bp y/y) beat Street (20.3%) by ~230bp, with the OI beat ($26M) larger than the revenue beat ($22M) as headcount fell q/q and opex grew 11%. GM of 84.2% was roughly in line but down 90bp y/y (subscription GM 85.4%, -130bp) on AI costs, and mgmt still expects FY27 GM to decline as COGS outgrows revenue, offset by opex leverage. The Q4 OM guide of 22.9% missed Street (24.3%) because a “significant portion” of the October reorg savings (~7% RIF; $60–70M Q4 severance) is being reinvested in retention, AI hiring and AI product. FY26 OM is ~21% (+~2.4pts) and the FY27 23–24% target was reaffirmed rather than raised, which frustrated some given the growth reset, though mgmt signaled it could go further on costs if trends persist.

利润率。非 GAAP 营业利润率 22.6%（同比 +270 个基点）超出市场预期（20.3%）~230 个基点，营业利润超预期金额（2600 万美元）大于营收超预期金额（2200 万美元），原因是环比人数下降且运营支出增长 11%。毛利率 84.2% 大致持平，但因 AI 成本同比下降 90 个基点（订阅毛利率 85.4%，-130 个基点），且管理层仍预计 FY27 毛利率将下降，因为营业成本增速超过营收，但被运营支出杠杆所抵消。四季度营业利润率指引 22.9% 低于市场预期（24.3%），因为 10 月重组节省的费用（约 7% 裁员；四季度遣散费 6000–7000 万美元）中有“很大一部分”被重新投入留任、AI 招聘和 AI 产品。FY26 营业利润率为 ~21%（+约 2.4 个百分点），且 FY27 23–24% 的目标得到重申而非上调，考虑到增长重置，这令部分人感到失望，尽管管理层暗示若趋势持续，可能会在成本上进一步发力。

Bull vs. Bear Debate 多空辩论

Bulls see HUBS as the scaled front-office platform for SMB and mid-market companies, with 311.7K customers, ~4,000 solution partners, about half of ARR outside the US and gross dollar retention that has held in the high 80s through two quarters of disruption. Their core argument is that AI raises, rather than erodes, the value of the unified customer data and workflow layer HUBS owns: models can draft emails and resolve tickets, but inside a business they need trusted, current context on pipeline, contacts and history, and SMBs lack the resources to build that themselves.

The long-term drivers are intact in that framing: upmarket expansion, multi-hub consolidation (62% of new Pro+ customers land with multiple hubs), core-seat growth (+34%) and a new consumption layer in credits that monetizes work done by agents rather than seats. The partner channel acts as a forward-deployed implementation arm for AI, and ease of use remains HUBS' edge with buyers who do not have AI teams.

多头将 HUBS 视为面向中小企业和中端市场的可扩展前台平台，拥有 31.17 万客户、约 1001#4,000 家解决方案合作伙伴，约一半的 ARR 来自美国以外，且在经历了两个季度的扰动后，美元毛留存率仍保持在 80% 出头的高位。他们的核心论点是，AI 提升而非削弱了 HUBS 所拥有的统一客户数据和工作流层的价值：模型可以起草邮件、解决工单，但在企业内部，它们需要关于销售管线、联系人和历史的可信、最新上下文，而中小企业缺乏自行构建这些资源的资源。 在此框架下，长期驱动因素依然完好：向高端市场扩张、多枢纽整合（62%的新 Pro+ 客户拥有多个枢纽）、核心席位增长（+34%）以及基于积分的新消费层，后者通过代理完成的工作而非席位来实现变现。 合作伙伴渠道充当了 AI 的前沿部署实施部门，易用性依然是 HUBS 在没有 AI 团队的买家面前的优势。

This quarter gave bulls more product evidence than any print this year. The revenue beat (2.4%) was bigger than Q2's (~1.5%), OM reached 22.6% with headcount down q/q, and AI usage outran the September run rate: Breeze Assistant reach of 61%, monthly agentic actions at 5x YTD, credit consumption at ~2.5x and 5,600+ custom agents. The connector data directly rebuts the headless-disintermediation bear case, since customers working through ChatGPT or Claude create more objects in HUBS, retain better (+13pts GRR) and buy seats at 3x the rate. The EMEA pilot is the bigger tell: it repeats the 2024 seat-pricing playbook that lowered ASPs first and then produced larger, better-retaining cohorts, and this time it comes with 2–3x credit consumption and stronger new ARR. Bulls also note that mgmt's guidance method is unchanged and the Q4 guide is flat q/q despite stable churn, so a normal ~2% beat would put Q4 near 14% and make the 2027 reset look overdone.

本季度为多头提供的产品证据多于今年任何一份财报。营收超预期幅度（2.4%）大于二季度（约 1.5%），在环比人数下降的情况下营业利润率达到 22.6%，且 AI 使用量超过了 9 月的运行速率：Breeze Assistant 覆盖率达 61%，月度智能体操作量为年内迄今的 5 倍，额度消耗量为~2.5 倍，且拥有 5,600 多个自定义智能体。连接器数据直接反驳了“无头化-去中介化”的空头逻辑，因为通过 ChatGPT 或 Claude 进行操作的客户在 HUBS 中创建了更多对象，留存表现更好（GRR 高出 13 个百分点），且购买席位的速率达到 3 倍。EMEA 试点是更重要的风向标：它重演了 2024 年的席位定价策略，即先降低 ASP，随后产生规模更大、留存更好的客户群，而这一次它还伴随着 2-3 倍的额度消耗以及更强的新 ARR。 多头还指出，管理层的指引方法未变，且在流失率稳定的情况下四季度指引环比持平，因此 ~2% 的正常超预期将使四季度接近 14%，并使得 2027 年的重置显得过度。

Bears argue that HUBS' growth engine (content- and SEO-driven inbound demand feeding a product-led SMB funnel) is being structurally impaired by AI search, and that the company is trying to change product, pricing and go-to-market all at once while its core acquisition channel shrinks. By mgmt's own description, the replacement channels are too nascent to fill the gap, and net adds have roughly halved from a 9–10K quarterly pace to ~5K, with Q4 lower still. Downmarket, AI tools compete for the same budget ("AI is a new line item"), and over time AI-native CRMs or frontier-model agents could commoditize the SMB front end, a risk bears see reflected in a pilot that narrows the Starter-to-Pro price gap. Credibility is the other issue: NNARR and NRR expectations have each been reset twice in two quarters, and the net-add guide has been withdrawn.

看空者认为，HUBS 的增长引擎（由内容和 SEO 驱动的入站需求注入产品主导的 SMB 漏斗）正受到 AI 搜索的结构性破坏，且在核心获客渠道萎缩之际，公司正试图同时改变产品、定价和上市策略。按管理层的说法，替代渠道尚处早期，无法填补缺口，净增数已从每季度 9–10K 的节奏大致减半至~5K，且 Q4 更低。在下沉市场，AI 工具在争夺同一预算（“AI 是一项新的预算科目”），而长期来看，AI 原生 CRM 或前沿模型智能体可能使 SMB 前端商品化，看空者认为一项缩小 Starter 与 Pro 版价格差距的试点正反映了这一风险。 可信度是另一个问题：NNARR 和 NRR 预期都在两个季度内被重置了两次，且净增指引已被撤回。

The quarter supplied the bear case with its best evidence yet. NNARR is now expected to decline for the full year, which requires a sharper decline in 2H; NRR is heading to ~100% in Q4, with seasonality pointing below 100% in 1H27; and upmarket, the supposed offset, slowed to +19% in $120K+ deals from +38%. GM fell 90bp y/y and is

guided down again in FY27, FCF guidance was cut by $30M, and the October reorg savings were reinvested rather than dropped to margin, which suggests less flexibility than bulls assume. On the bull assumptions, bears note that credit consumption has not shown up in NRR or NNARR, that the pilot lowers ASPs first, and that a global rollout, let alone any installed-base migration, could compress ARR before usage catches up. They also argue that an FCF multiple flatters the stock while SBC still runs at ~13% of revenue.

本季度为看空逻辑提供了迄今最有力的证据。目前预计 NNARR 全年将出现下降，这意味着下半年需要更大幅度的下滑；NRR 在第四季度趋向 ~100%，而季节性因素指向 27 年上半年将低于 100%；作为所谓抵消因素的高端市场增长则放缓，$120K+ 规模交易的增速从 +38% 降至 +19%。毛利率同比下降 90 个基点，且 FY27 指引再次下调，FCF 指引被下调 30M 美元，10 月重组节省的成本被重新投入而非转化为利润率，这表明其灵活性低于多头所假设的水平。针对多头的假设，空头指出消耗量尚未在 NRR 或 NNARR 中体现，试点会首先拉低 ASP，而全球推广（更不用说任何存量客户的迁移）可能会在用量跟上之前压缩 ARR。他们还认为，FCF 倍数美化了股票，而 SBC 仍占收入的 ~13%。

EXPE -8%: 3Q Beat but 4Q Guide worse EBITDA Guide Light

EXPE -8%：3Q 超预期但 4Q 指引不佳，EBITDA 指引偏低

Better 3Q but didn’t carry into 4Q. Nights reaccelerated to +6.9% and bookings grew 10.7%, both above the bogeys, on B2B (+19%) and a fall sale pulled into September. But the 4Q bookings guide (+4.2% at the mid) missed the ~6% bogey, as feared after BKNG. The CFO blamed a “softer operating environment” to start 4Q (US election cycle, Middle East/Europe disruption) and lapping last 4Q’s heavy B2B partner promos. 4Q EBITDA was guided to $855M at the mid, $60M under Street. That’s a ~23% margin, down ~90bps y/y (vs. ~+50bps implied in August), on slower growth, less marketing leverage and acquisition costs. Asked about 2027 margins, the CFO gave no number, only “incremental progress”.

三季度表现更佳，但未能延续至四季度。夜间增速重新加快至+6.9%，预订量增长 10.7%，均超出基准预期，这得益于 B2B（+19%）以及秋季大促提前至 9 月。但正如 BKNG 之后所担忧的那样，四季度预订量指引（中值+4.2%）未达~6%的基准预期。CFO 将其归咎于四季度初“更为疲软的运营环境”（美国大选周期、中东/欧洲局势动荡）以及去年四季度密集的 B2B 合作伙伴促销带来的高基数效应。四季度 EBITDA 指引中值为 8.55 亿美元，较市场预期低 6000 万美元。对应的~23%利润率同比下滑~90 个基点（而 8 月隐含的预期为~+50 个基点），原因在于增速放缓、营销杠杆减弱以及收购成本。被问及 2027 年利润率时，CFO 未给出具体数字，仅表示会有“渐进式进展”。

Lightly owned which rallied 10% yesterday with BKNG and the post-election rotation out of semis into travel and consumer so this just giving those gains away. On AI, the CEO said agentic traffic is “very small so far” and isn’t taking from direct which is mildy reassuring, and that the economics of the META Muse and GOOGL AI Mode deals “are being worked out”. Overall, a better 3Q than hoped, but it confirms the 4Q slowdown BKNG flagged.

轻仓持有，昨日随 BKNG 上涨 10%，且大选后资金从半导体轮动至旅游和消费板块，因此现在只是回吐了那些涨幅。关于 AI，CEO 表示智能体流量“目前非常小”，并未从直接流量中分流，这略微令人安心，并称 META Muse 和 GOOGL AI Mode 合作的商业模式“正在敲定中”。总体而言，三季度表现好于预期，但证实了 BKNG 所指出的四季度放缓。

Key Takeaways

- **Guide.** 4Q GB of $27.9–28.4B (midpoint $28.15B, +4.2% y/y including a ~0.5pt FX headwind) is ~0.6% below Street’s $28.3B (+~5%). Revenue of $3.69–3.75B (+4.9% at the midpoint) is ~0.5% below Street’s $3.74B (+~5.4%). EBITDA of $830–880M (+1% y/y at the midpoint) is ~7% below Street’s ~$915M, and even the high end is ~4% light. The more telling comparison is against mgmt’s own August framework. The prior FY guide implied 4Q GB of ~$28.2B, which is unchanged. It also implied 4Q EBITDA of ~$900M with ~+50bp of y/y margin expansion, which the CFO spelled out on the 2Q call. The new guide implies ~$855M and ~90bp of contraction. The $1.5B raise to the FY GB midpoint equals the 3Q beat vs. the guide midpoint, so mgmt held the 4Q top line and cut 4Q margin. Across 2H, the $137M 3Q EBITDA beat still more than covers the ~$60M 4Q shortfall vs. Street. 3Q was the sixth straight quarter above the high end of guidance.

指引。第四季度 GB 为 279–284 亿美元（中值 281.5 亿美元，同比增长 4.2%，包含 ~0.5pt 的汇率逆风），较 Street 的 283 亿美元（+~5%）低 ~0.6%。收入为 36.9–37.5 亿美元（中值增长 4.9%），较 Street 的 37.4 亿美元（+~5.4%）低 ~0.5%。EBITDA 为 8.3–8.8 亿美元（中值同比增长 1%），较 Street 的 ~9.15 亿美元低 ~7%，即便是高端也 ~4% 不及。更具说服力的对比是与管理层 8 月的框架相比。此前财年指引隐含第四季度 GB 为 ~282 亿美元，保持不变。还隐含第四季度 EBITDA 为 ~9 亿美元，且 ~ 同比利润率扩张 50bp，CFO 在第二季度电话会议上曾明确说明。新指引隐含 ~8.55 亿美元，且 ~ 收缩 90bp。 15 亿美元的融资额与全年指引中值的比值，等于三季度超出指引中值的幅度，因此管理层维持了四季度营收指引，但下调了四季度利润率。纵观下半年，三季度 1.37 亿美元的 EBITDA 超预期仍足以弥补四季度相比华尔街预期~$6000 万美元的缺口。三季度已是连续第六个季度超出指引上限。

- **Demand.** Room nights accelerated to +6.9% (from +5.7%) vs. Street +3.8%. The US grew mid-single digits and EMEA low single digits (both stable), while RoW grew mid-teens (from low double digits). Consumers kept prioritizing travel despite elevated airfares, and affluent travelers again led. ADR growth slowed to +2.5% (+3% FX-neutral) from +5.4%, and mgmt expects that moderation to continue. Air tickets fell 6% on sharply higher ATPs, though non-lodging GB grew 14%. The September sale, EXPE's third straight $1B+ event, pulled demand into 3Q. For 4Q, nights are guided "positive in Q4, but more modest," slowing roughly in line with FX-neutral bookings. That implies ~+1–2% vs. Street ~+4% going in. Some post-print models have B2C nights turning negative, which would be the first decline since 1Q21. In August, mgmt had guided nights to slow on tougher comps; instead they accelerated.

需求。客房夜数增速加快至 +6.9%（此前为 +5.7%），市场预期为 +3.8%。美国增长为中个位数，欧洲、中东和非洲（EMEA）为低个位数（两者均保持稳定），而世界其他地区（RoW）增长为中十几位数（此前为低十几位数）。尽管机票价格上涨，消费者仍继续优先考虑旅行，富裕旅客再次领跑。平均房价（ADR）增速从 +5.4% 放缓至 +2.5%（固定汇率下为 +3%），管理层预计这种放缓趋势将持续。受平均票价（ATP）大幅上涨影响，机票销量下降 6%，而非住宿类总预订量（GB）增长 14%。9 月促销活动是 EXPE 连续第三个超 10 亿美元的活动，将需求拉入了第三季度。对于第四季度，客房夜数指引为“第四季度为正，但更为温和”，增速放缓幅度大致与固定汇率下的预订量一致。 这意味着进入时为 ~+1–2%，而市场预期为 ~+4%。一些财报后模型显示 B2C 夜间量转为负值，这将是自 21 年一季度以来的首次下降。8 月份，管理层曾因更严的基数效应指引夜间量将放缓；然而实际上却加速了。

- **Callback.** The post-earnings callback was more constructive on 4Q. The $1B+ fall sale should not be read as the amount of B2C demand pulled forward. The benefit spread across the business, though it was concentrated in B2C, and B2C is still expected to grow in 4Q. That pushes back on the view that the guide assumes roughly zero B2C growth. 4Q assumes continued weakness in Europe and the Middle East, while Mexico is no longer a headwind. Vrbo is performing well despite several changes happening at once. Ads slowed because of significant product changes, but the long-term opportunity was described as large and high-margin. Natural-language search is still small, with encouraging early results, and third-party AI traffic and bookings remain tiny. With ~2/3 of traffic direct, mgmt sees AI as a way to bring more early-stage trip planning onto its own sites and apps.

回调。财报后的回调对第四季度更为乐观。10 亿美元以上的秋季促销不应被解读为 B2C 需求被提前拉动的规模。其收益遍布整个业务，尽管主要集中在 B2C，且 B2C 仍预计在第四季度实现增长。这反驳了业绩指引假设 B2C 增长大致为零的观点。第四季度假设欧洲和中东地区持续疲软，而墨西哥已不再是阻力。尽管同时发生了多项变化，Vrbo 仍表现良好。由于重大的产品变更，广告业务放缓，但长期机遇被描述为规模巨大且利润率高。自然语言搜索目前规模尚小，早期结果令人鼓舞，而第三方 AI 流量和预订量仍然微乎其微。 在~2/3 的流量为直接流量的情况下，管理层将 AI 视为一种将更多早期行程规划引入其自有网站和应用的途径。

- **B2C.** B2C GB grew 7.1% (from 7.5% in 2Q and 9.6% in 1Q) vs. Street ~+4%. US growth accelerated and Brand Expedia was again the fastest-growing brand. B2C revenue grew 6.3% (from 8.0%) vs. Street +~3.6%. By one Street estimate, B2C

GB grew only ~4% excluding the sale shift, though the callback disputed that framing (below). Active loyalty members grew low single digits, with faster growth in the Silver+ tiers, whose members book more direct. Two-thirds of consumer bookings remain direct. The concern is that reported B2C growth has slowed for three straight quarters, even with a sale tailwind this time.

B2C。B2C GB 增长 7.1%（二季度为 7.5%，一季度为 9.6%），而市场预期为~+4%。美国区增长加速，Expedia 品牌再次成为增长最快的品牌。B2C 营收增长 6.3%（此前为 8.0%），而市场预期为+~3.6%。根据某市场机构估算，剔除销售时点转移影响后，B2C GB 仅增长~4%，不过随后的电话会议对此说法提出了反驳（见下文）。活跃忠诚会员呈低个位数增长，其中 Silver+等级会员增长更快，而这些会员的直接预订比例更高。三分之二的消费者预订仍为直接预订。令人担忧的是，即使此次有促销利好，报告的 B2C 增长也已连续三个季度放缓。

- **B2B.** B2B GB grew 18.8% (from 21.5%) vs. Street ~+11%, and revenue grew 22.7% (from 23.5%) vs. Street ~+15%. Growth was double-digit in every region, take rate rose ~50bp y/y and partners reached 75K (from 70K+ in August). Still, bookings growth slowed ~3pts against an easier comp. 4Q slows further as EXPE laps the “robust promotional activity” from “some of our largest partners” that ramped in 4Q25, and post-print models have 4Q B2B revenue growth at roughly +8–13%. B2B EBITDA rose 17% to $470M (~6% above Street), but margin fell 134bp to 27.5%. The CFO called partner mix the primary driver, as growing partners move into higher tiers. One-stop-shop investment (Tiqets, plus CarTrawler, which closed late in 3Q and adds 4Q costs) was the smaller factor. That is a shift from 2Q, when mgmt tied partner-mix pressure to large partners’ promotions, which fade. Tiering pressure grows as partners grow (quote #2). Mgmt did not address BKNG’s B2B push.

B2B。B2B GB 增长 18.8%（此前为 21.5%），而华尔街预期为~+11%；收入增长 22.7%（此前为 23.5%），而华尔街预期为~+15%。每个地区均实现双位数增长，take rate 同比上升~50bp，合作伙伴达到 75K（8 月份为 70K+）。尽管如此，在基数较易的情况下，bookings 增长仍放缓了~3pts。由于 EXPE 度过了由“我们的一些最大合作伙伴”在 4Q25 发起并放量的“强劲促销活动”期，4Q 增速将进一步放缓，且财报后模型显示 4Q B2B 收入增长约为+8–13%。B2B EBITDA 增长 17%至 4.7 亿美元（较华尔街预期高约 6%），但利润率下降 134bp 至 27.5%。CFO 称合作伙伴组合是主要驱动因素，因为不断增长的合作伙伴进入了更高层级。一站式商店投资（Tiqets，加上在 3Q 末完成收购并增加 4Q 成本的 CarTrawler）是次要因素。 这与二季度的情况有所不同，当时管理层将合作伙伴组合压力与大型合作伙伴的促销联系起来，而此类促销会逐渐消退。分层压力随着合作伙伴的增长而加剧（引文 #2）。管理层未谈及 BKNG 的 B2B 推进。

- **Margins.** EBITDA margin hit a record 34.2% (+135bp y/y) vs. Street 32.8%, against a guide that implied flat-to-down margins. B2C margin rose 273bp to 43.5% because direct marketing was flat y/y on +7% bookings (4.5% of B2C GB, down 34bp y/y). That is the sixth straight quarter of B2C marketing leverage, and overhead grew just 1%. 4Q flips to ~90bp of contraction for four reasons: slower revenue against fixed costs, lapping last year’s removal of inefficient marketing spend, B2B partner mix and acquisition costs. Consumer marketing leverage now continues “at a slightly diminished pace” (quote #1). The FY margin guide rose to +180–200bp (from +150–175bp) vs. Street ~+170bp. That implies FY EBITDA of ~$4.18–4.23B (+20% y/y) vs. Street ~$4.13B, and >4pts of expansion over 2024–26. For 2027, mgmt offered only “incremental progress,” so the Street’s ~9% EBITDA growth has to come from revenue leverage rather than cost cuts.

利润率。EBITDA 利润率创下 34.2%的纪录（同比+135 个基点），而市场预期为 32.8%，且此前指引暗示利润率持平或下降。B2C 利润率上升 273 个基点至 43.5%，原因是预订量同比+7%的情况下直接营销费用持平（占 B2C 总预订量的 4.5%，同比下降 34 个基点）。这是 B2C 营销杠杆连续第六个季度发挥作用，且间接费用仅增长 1%。由于四个原因，四季度转为~90 个基点的收缩：营收放缓面对固定成本、去年剔除低效营销支出的基数效应、B2B 合作伙伴组合以及收购成本。消费者营销杠杆现在以"略微放缓的步伐"延续（引文#1）。全年利润率指引升至+180–200 个基点（原为+150–175 个基点），而市场预期为~+170 个基点。 这意味着全年 EBITDA 为~$41.8–42.3 亿（同比+20%），而市场预期为~$41.3 亿，且 2024–26 年间利润率扩张超过 4 个百分点。对于 2027 年，管理层仅给出了"渐进式进展"的指引，因此市场预期的~9%的 EBITDA 增长必须来自营收杠杆而非成本削减。

- **AI.** Agentic traffic is "very small" but high-intent. The new data point is where it comes from: mgmt does not see it hurting direct traffic and says it is "either incremental or it's taken from other paid channels." EXPE partnered with Google in AI Mode and claims leading US citation share on third-party data. A direct Meta Muse integration went live in the US during the call; Muse gets EXPE prices and content and can either book in-app or send travelers to EXPE. EXPE is also in OpenAI's ad products and accepts lower returns while testing. Partnership economics are still "being worked out." In B2B, Qantas is the first partner on a new agentic template, and mgmt said it would supply agents that want to be the booking provider themselves (quote #3). Internally, AI drove record attach rates on Brand Expedia.

AI。智能体流量"非常小"但意图强烈。新的数据点在于其来源：管理层认为它不会冲击直接流量，并表示它"要么是增量，要么是从其他付费渠道分流而来的"。EXPE 与 Google 在 AI Mode 中达成合作，并声称在第三方数据中占据美国领先引用份额。在电话会议期间，Meta Muse 的直接集成已在美国上线；Muse 获取 EXPE 的价格和内容，既可在应用内预订，也可将旅客引导至 EXPE。EXPE 也加入了 OpenAI 的广告产品，并在测试期间接受较低的回报。合作的商业模式仍在"探索中"。在 B2B 方面，澳洲航空（Qantas）是全新智能体模板的首个合作伙伴，管理层表示它将为那些希望自身成为预订提供商的智能体提供支持（引言#3）。 Internally,AI 推动了 Brand Expedia 创纪录的附加率。

Activity-agent users are twice as likely to book an activity within seven days,

Vrbo's agentic voice resolves >15% of inbound contacts at lower cost, and a hotel-onboarding agent was built in under a quarter. Mgmt kept arguing that the near-term AI payoff is personalization and cost, not conversational search.

活动代理用户在七天内预订活动的可能性是普通用户的两倍，Vrbo 的智能语音代理以更低的成本解决了 >15% 的进线咨询，而酒店入驻代理在不到一个季度的时间内就构建完成。管理层一直主张，AI 的近期回报在于个性化和成本，而非对话式搜索。

- **Advertising.** EG advertising revenue growth halved to 7% from 13% in both 1Q and 2Q. An ad product overhaul under a new ads leader (better campaign management, groundwork for AI tools) disrupted near-term growth; trivago grew 20%. Mgmt still calls ads a high-margin business with a "long runway" and is expanding Vrbo sponsored listings, display and off-platform ads. It gave no timeline for growth to recover. This matters for mix because ads are among the highest-margin revenue. The bear argument is that better AI recommendations, on EXPE's platform or in agents, make sponsored listings structurally harder to sell.

广告。EG 广告收入增速减半，从一季度的 13%降至二季度的 7%。在新广告业务负责人领导下进行的广告产品全面调整（更优的广告活动管理，AI 工具的基础搭建）拖累了短期增长；trivago 增长了 20%。管理层仍称广告为高利润率业务，具有"长期增长空间"，并正在扩展 Vrbo 的赞助列表、展示广告及平台外广告。公司未给出增速恢复的时间表。这对业务组合很重要，因为广告是利润率最高的收入之一。看空逻辑是，无论是在 EXPE 平台上还是在智能体中，更优的 AI 推荐都会在结构上增加赞助列表的销售难度。

- **Pricing.** Take rate (revenue/GB) was 14.5%, +16bp y/y: B2B rose ~50bp and B2C fell ~10bp on a heavier air mix. Mgmt expects no impact on overall take rate from Vrbo's commission/fee changes. It acknowledged ongoing host "discussions and education" and said the industry is moving toward "similar structures." Mgmt gave no direct commentary on competition from BKNG in B2B or ABNB in hotels.

定价。抽成率（收入/总预订量）为 14.5%，同比增长 16 个基点：B2B 上升约 50 个基点，B2C 因机票组合占比增加而下降约 10 个基点。管理层预计 Vrbo 的佣金/费用调整不会对整体抽成率产生影响。管理层承认与房东的"讨论和引导"仍在进行，并表示行业正朝着"类似的结构"发展。管理层未直接评论 BKNG 在 B2B 领域或 ABNB 在酒店领域的竞争。

- **Product.** The fall release shipped 30+ features, most unrelated to natural-language search. They include flexible package search on Expedia, reserve now/pay later across all brands including Vrbo (a feature that has gained traction at ABNB), and conversational agents in the booking flow. EXPE also closed CarTrawler and launched an activities API to fill out its B2B one-stop shop.

  产品。秋季版本发布了 30 多项功能，大多与自然语言搜索无关。其中包括 Expedia 上的灵活套餐搜索、所有品牌（包括 Vrbo）的“先订后付”（这是 ABNB 颇受欢迎的一项功能），以及预订流程中的对话代理。EXPE 还完成了对 CarTrawler 的收购，并推出了活动 API，以完善其 B2B 一站式服务。

- **Concentration.** Mgmt repeated that there is no “inordinate concentration in any particular partner” across its 75K B2B partners. Yet it tied the 4Q B2B slowdown to lapping promotions at “some of our largest partners,” and the margin pressure to large partners moving up tiers. So a handful of large partners clearly drive both B2B’s growth rate and its margin. Asked to bring back the old breakdown of B2B growth (wallet share with existing partners vs. new partners), mgmt said only it would “look at what we will disclose in future quarters.”

  集中度。管理层重申，在其 7.5 万 B2B 合作伙伴中，不存在“对任何特定合作伙伴的过度集中”。然而，它将四季度 B2B 放缓归因于“我们一些最大合作伙伴”的促销期过去，并将利润率压力归因于大合作伙伴层级提升。因此，少数大合作伙伴显然同时驱动了 B2B 的增长率及其利润率。当被要求恢复此前 B2B 增长的拆分（现有合作伙伴的钱包份额与新合作伙伴对比）时，管理层仅表示会“看看未来几个季度我们将披露什么”。

- **Macro.** Mgmt described a “softer operating environment” at the start of 4Q. The US election impact is “roughly similar” to prior cycles. Geopolitical events in the Middle East and Europe are disrupting demand in those regions and on the long-haul routes through them. BKNG flagged the same EU/ME softness a day earlier and guided 4Q room nights to ~+3%. Bears will press the point that EXPE is guiding below that with a B2C business that is two-thirds US. EXPE’s number does, however, also absorb the sale timing and the B2B promo lap. Mgmt made no tariff commentary. Elevated airfares are the relevant input-price issue, and the guide assumes ATPs hold steady into 4Q.

宏观。管理层描述了四季度初的“较软运营环境”。美国大选的影响与以往周期“大致相似”。中东和欧洲的地缘政治事件正在扰乱这些地区以及途经该地区的长途航线的需求。BKNG 一天前也指出了同样的欧盟/中东疲软，并预计四季度间夜数将达到 ~+3%。看空者将强调，EXPE 的指引低于该水平，且其 B2C 业务有三分之二在美国。然而，EXPE 的数据也吸收了销售时机和 B2B 促销基数效应的影响。管理层未就关税发表评论。高企的机票价格是相关的投入价格问题，且该指引假设 ATPs 在进入四季度后将保持稳定。

Bull vs. Bear Debate 多空辩论

The bull thesis is that EXPE has gone from a perennial underperformer to a consistent compounder with three engines growing faster than the industry. Since the 2024 CEO change, mgmt has beaten the high end of guidance six quarters running. Margins have expanded more than 4pts over 2024–26, TTM FCF has grown to ~$3.7B, and the share count is falling ~4% a year. B2B is the crown jewel: the largest white-label/API travel platform, with 75K partners and double-digit growth in every region. Its addressable market is essentially all of a $3T+ travel industry outside supplier-direct bookings and a couple of the largest OTAs. The hardest parts to copy are global multi-product supply, payments, and servicing that non-travel brands can put their own name on, and CarTrawler, Tiqets and the activities API are making that package harder to match.

看多逻辑在于，EXPE 已从长期表现不佳者转变为稳定的复利增长公司，拥有三个增速快于行业的引擎。自 2024 年更换 CEO 以来，管理层已连续六个季度超出业绩指引上限。2024–26 年间利润率扩张超 4 个百分点，TTM FCF 增长至~$37 亿，且流通股数量以每年~4%的速度递减。B2B 业务是皇冠上的明珠：作为最大的白标/API 旅游平台，拥有 7.5 万个合作伙伴，且各地区均实现双位数增长。其可寻址市场基本上是 3 万亿美元以上旅游行业中，除供应商直订和几家最大 OTA 之外的全部市场。 最难复制的部分是跨全球的多产品供应、支付和服务，非旅游品牌可以将自己的名字冠名其上，而 CarTrawler、Tiqets 和活动 API 正使这一组合更难被匹敌。

In B2C, the re-platforming is finished and the product is improving: personalization drives record attach, loyalty is skewing toward higher tiers that book direct, and Vrbo runs at a ~$1B annual vacation-rental pace through Brand Expedia. Marketing is now measured on incremental return rather than volume. AI works first as a cost and product lever. The Vrbo voice agent, a hotel-onboarding agent built in under a quarter,

and ~40% faster engineering cycle times all support continued cost leverage.

在 B2C 领域，平台重构已完成且产品正在改进：个性化推动了创纪录的附加销售，忠诚度正向直接预订的更高层级倾斜，而 Vrbo 通过 Brand Expedia 以 ~$10 亿 的年度度假租赁规模运行。营销现在以增量回报而非体量来衡量。AI 首先作为成本和产品杠杆发挥作用。Vrbo 语音代理、一个在不到一个季度内构建的酒店入驻代理，以及 ~40% 更快的工程周期，均支撑着持续的成本杠杆效应。

This quarter gives bulls plenty to point to. Nights accelerated to +6.9% vs. Street +3.8%. US consumer bookings accelerated while BKNG's US nights slowed from high-single to mid-single digits, which suggests EXPE is taking share in its core market. B2B grew 19% on a harder comp, B2C margin expanded 273bp on flat marketing, overhead grew 1%, and 2H EBITDA (3Q actual plus the 4Q guide) is still ahead of the Street. Most of the 4Q slowdown has identifiable, temporary causes: a sale that moved a few weeks, an election mgmt says looks like prior cycles, a one-time promo comp at large B2B partners, and EU/ME disruption that BKNG is also seeing. On AI, agentic traffic is replacing other paid channels rather than direct traffic. EXPE and Hotels.com are launch partners in Google's agentic hotel booking in AI Mode, where the OTA remains merchant of record and handles servicing, and EXPE is integrated with Meta Muse. B2B gives EXPE a second way to win if agents want to own the booking themselves.

本季度为多头提供了不少利好依据。间夜量加速至 +6.9%，而市场预期为 +3.8%。美国消费者预订量加速，同时 BKNG 的美国间夜量增速从高个位数放缓至中个位数，这表明 EXPE 正在其核心市场抢占份额。B2B 在更难的基数下增长 19%，B2C 利润率在营销支出持平的情况下扩大 273 个基点，管理费用增长 1%，且下半年 EBITDA（3Q 实际业绩加上 4Q 指引）仍高于市场预期。4Q 的大部分放缓都有可识别的、暂时性原因：一次推迟了几周的促销活动、管理层称与以往周期相似的选举影响、大型 B2B 合作伙伴的一次性促销基数效应，以及 BKNG 也在经历的欧洲/中东地区扰动。在 AI 方面，代理型流量正在取代其他付费渠道，而非直接流量。EXPE 和 Hotels。com 是 Google AI 模式下代理式酒店预订的发布合作伙伴，其中 OTA 仍为记录商户并负责服务，而 EXPE 已与 Meta Muse 集成。如果代理希望自行拥有预订，B2B 为 EXPE 提供了另一种获胜途径。

Estimates could rise for four reasons: a clean 2027 re-acceleration once 4Q's noise laps, ads recovering after the product overhaul, AI-driven servicing and marketing efficiency sustaining ~100bp a year of margin expansion, and a ~12% FCF yield

funding 4–5% annual share count reduction. The multiple would re-rate as the execution record lengthens and the agentic overhang fades, closing the gap to BKNG's ~15x.

估值可能因四个原因而上调：一旦第四季度的噪音消除，2027 年将实现干净的重回加速；产品大修后广告业务复苏；AI 驱动的服务和营销效率每年维持 ~100bp 的利润率扩张；以及 ~12% 的自由现金流收益率支持 4–5% 的年度股数减少。随着执行记录拉长且代理式业务的担忧消退，估值倍数将重估，从而缩小与 BKNG ~15x 的差距。

The bear thesis is that EXPE's 2024–26 re-rating was built on one-time self-help that is now used up, just as its two pillars come under pressure. The margin story came mostly from cutting inefficient B2C marketing and holding overhead flat. Mgmt now says marketing leverage continues "at a slightly diminished pace," and the 4Q guide shows what happens to the P&L when revenue growth slows. B2C is growing volumes in the low single digits (~4% GB ex-sale), with nights possibly negative in 4Q. B2B, the growth engine, is slowing (21.5% → 18.8% → low teens or below in 4Q) as its economics worsen, because the biggest partners graduate into richer tiers. Meanwhile BKNG is consolidating the B2B units of Agoda, Booking.com and Priceline under one leader in early 2027. One outside estimate, sensitive to its assumptions, already puts BKNG's B2B room nights ~15% above EXPE's. AI is the terminal-value risk.

看空逻辑认为，EXPE 2024–26 年的估值重估建立在现已耗尽的一次性自救措施之上，而此时其两大支柱正面临压力。利润率改善的故事主要源于削减低效的 B2C 营销以及保持管理费用持平。管理层现在表示，营销杠杆仍在继续，但"步伐略有放缓"，而四季度指引则展示了营收增长放缓时损益表会受到何种影响。B2C 销量仅呈低个位数增长（剔除销售后 GB 约 4%），四季度间夜数可能为负。B2B 作为增长引擎正在放缓（21.5% → 18.8% → 四季度降至 10% 出头或更低），因为其经济效益恶化，原因在于最大的合作伙伴晋升至分成比例更高的层级。与此同时，BKNG 将于 2027 年初在一位领导者旗下整合 Agoda、Booking.com 和 Priceline 的 B2B 业务部门。一项外部估算（对其假设敏感）已经将 BKNG 的 B2B 间夜数定为比 EXPE 高 ~15%。AI 是终值风险。

Google's agentic hotel booking in AI Mode launched with hotel chains (Marriott, Hilton, IHG) alongside the OTAs, passes partners only minimal booking data and has an undisclosed commercial model. EXPE's US-centric, chain-heavy supply is more exposed than BKNG's European independents. Owning travel discovery is why B2C margins run ~16pts above B2B. If that discovery moves to agents, EXPE could end up as a B2B-style supplier earning B2B-style margins.

Google 在 AI Mode 中推出的代理式酒店预订与连锁酒店（万豪、希尔顿、IHG）以及 OTA 一同上线，仅向合作伙伴传递极少的预订数据，且商业模式未公开。以美国为中心、以连锁酒店为主的 EXPE 供应量比 BKNG 的欧洲独立酒店更容易受到冲击。掌控旅游发现是 B2C 利润率比 B2B 高出 ~16pts 的原因。如果这种发现转移到代理端，EXPE 最终可能沦为 B2B 式供应商，赚取 B2B 式的利润率。

The quarter supports the bear case in several places. The sale timing flattered 3Q. The 4Q guide implies ~1–2% nights and ~90bp of margin contraction, a ~140bp swing from the ~+50bp mgmt framed in August. That dents the say/do credibility at the heart of the bull case. EXPE is guiding 4Q nights below BKNG's ~3% even though the EU/ME disruption sits mostly outside its two-thirds-US B2C base. The demand base is also narrowing: affluent travelers carry the growth, and mgmt flagged rising use of budget filters in September. B2B margin fell 134bp before CarTrawler's costs are fully in, and mgmt now blames partner tiering rather than promotions. Ads growth halved to 7%, ADR has stopped being a tailwind, and TTM FCF fell from $4.5B to $3.7B in a single quarter. Mgmt is also testing new AI ad channels while explicitly accepting lower returns, which is what rising customer acquisition cost looks like early.

本季度在多个方面支撑了看空情形。销售时机让第三季度数据显得更好。第四季度指引意味着~1–2%的间夜量和~90 个基点的利润率收缩，较 8 月管理层给出的~+50 个基点出现~140 个基点的反转。这削弱了看空情形核心的"言行一致"可信度。EXPE 给出的第四季度间夜量指引低于 BKNG 的~3%，尽管欧盟/中东地区的干扰主要发生在其三分之二为美国市场的 B2C 业务之外。需求基础也在收窄：富裕旅客支撑增长，且管理层指出 9 月预算筛选的使用量上升。在 CarTrawler 成本完全计入之前，B2B 利润率已下降 134 个基点，管理层现在将原因归咎于合作伙伴分级而非促销。广告增速腰斩至 7%，ADR 已不再是顺风，TTM 自由现金流在一个季度内从 45 亿美元降至 37 亿美元。 管理层也在测试新的 AI 广告渠道，同时明确接受较低的回报，这正是客户获取成本上升初期的表现。

Estimates would fall if 2027 EBITDA grows mid-single digits rather than the Street's ~9%: marketing leverage runs out, B2B mix keeps diluting margins, and savings get reinvested in agentic channels and acquisition integration. The multiple would compress because the stock is up ~50% in 12 months. At the close it traded roughly in line with BKNG on forward P/E, vs. a ~37% average BKNG premium over the past three years, despite slower B2C growth and greater agentic exposure.

如果 2027 年 EBITDA 增长为个位数中段，而不是华尔街预期的 ~9%，预期将会下调：营销杠杆耗尽，B2B 占比持续稀释利润率，节省的资金被重新投入到代理渠道和收购整合中。估值倍数会压缩，因为该股在 12 个月内上涨了 ~50%。收盘时，其远期市盈率大致与 BKNG 持平，而过去三年对 BKNG 的平均溢价为 ~37%，尽管 B2C 增长较慢且代理业务风险敞口更大。

ARM -8%: AGI CPU Outlook Raised to “Up to $2B,” licensing better but Royalties Missed Again

ARM -8%：AGI CPU 展望上调至“最高 20 亿美元”，许可业务有所改善，但特许权使用费再次不及预期

License continues to carry ARM while phones drag on royalties. License ($773M, +50%) ran “around $100 million higher than we had anticipated”, while royalty ($670M, +8%) missed the ~$705-712M bogeys. The $1.54B Dec-Q guide matched the top of the ~$1.50-1.54B bogeys, with implied op income ~$10M above Street. But the CFO guided royalty up just “low single digits year-on-year” (~$755M on last year’s $737M, vs. Street $818M). Add Street’s March quarter and FY27 royalty is ~$2.96B (+13%), below the ~$3.06-3.10B bogeys. Mgmt blamed memory prices hitting mid- and low-end phones and sees some recovery in the March quarter, but wouldn’t commit to license holding ~$770M a quarter next year and didn’t update July’s high-teens FY27 royalty view.

授权业务继续支撑 ARM，而手机业务拖累版税。授权（7.73 亿美元，+50%）运行“比我们预期高出约 1 亿美元”，而版税（6.70 亿美元，+8%）未达 ~$7.05-7.12 亿的预期目标。15.4 亿美元的 12 月季度指引符合~$15.0-15.4 亿预期区间的上限，隐含营业利润~$1000 万高于华尔街预期。但 CFO 指引版税仅“同比低个位数增长”（去年 7.37 亿美元的基础上约 7.55 亿美元，而华尔街预期为 8.18 亿美元）。加上华尔街对 3 月季度和 27 财年的版税预期，27 财年版税为~$29.6 亿（+13%），低于~$30.6-31.0 亿的预期目标。管理层将其归咎于内存价格冲击中低端手机，并预计 3 月季度会有所复苏，但不愿承诺明年授权每季度保持在~$7.70 亿，也未更新 7 月份提出的 27 财年版税高十位数增长的看法。

Positioning mixed going in with stock down 30% in Oct. AGI CPU offset the royalty miss: asked what drives the $15B FY31 target, the CFO said “we are increasing our confidence to deliver $2 billion” over FY27-28 (vs. >$1B in July), the top of the ~$1.5-

2.0B bogeys. Overall, worse than feared on royalties but delivered the AGI CPU raise bulls wanted.

定位褒贬不一，10 月股价下跌 30%之际介入。AGI CPU 抵消了授权费的缺失：在被问及是什么驱动 310 亿美元（$15B）的 31 财年目标时，CFO 表示，“我们正在增强在 27-28 财年交付 20 亿美元（$2 billion）的信心”（相比之下，7 月份为超过 10 亿美元（>$1B）），即~$1.5-2.0B 目标的最高端。总体而言，授权费情况比担忧的更糟，但实现了多头所期望的 AGI CPU 提价。

Key Takeaways

- **AGI CPU.** Mgmt raised its FY27–28 AGI CPU outlook to “up to $2B,” from “>$1B” in July and $1B at the March launch. It is now backed by signed POs from multiple customers running through CY27, plus signed supply agreements covering wafers, substrates, test and memory. Meta is the chief customer, with “multiple customers beyond Meta.” OCI plans AGI CPU instances in 2027, and Supermicro, Lenovo and ASRock are building the racks. Pilot units have shipped, but first commercial revenue is still FQ4 (mgmt said to assume nothing material in FQ3). Street carried only ~$1.2–1.3B across FY27–28 pre-print and post-print models sit at ~$1.0–1.6B, so the full $2B is still not in numbers. Mgmt will firm up the figure on the FQ3 call. The new point is that mgmt said beating $2B would likely mean upside to the original ~$2B FY29 / ~$5B FY30 plan, with new targets at the next Arm Everywhere event (spring/1H CY27).

  AGI CPU。管理层将其对 27–28 财年 AGI CPU 的展望上调至“最高 20 亿美元”，而 7 月份为“>10 亿美元”，3 月发布时为 10 亿美元。目前该展望已获多个客户签署的采购订单（PO）支持，订单持续至 27 日历年，外加涵盖晶圆、基板、测试和内存的已签署供应协议。Meta 是主要客户，此外还有“Meta 之外的多个客户”。OCI 计划在 2027 年推出 AGI CPU 实例，Supermicro、联想和 ASRock 正在构建机架。试产单元已发货，但首批商业化收入仍将在 FQ4（管理层表示应假定 FQ3 无任何实质性收入）。财报前模型中市场仅计入~$12–13 亿，财报后模型为~$10–16 亿，因此完整的 20 亿美元尚未计入预期数字。管理层将在 FQ3 电话会议上敲定该数字。新的一点是，管理层表示超过~$2B 可能意味着原~$2B FY29 / ~$5B FY30 计划有上行空间，并将在下一次 Arm Everywhere 活动（春季/1H CY27）公布新目标。

- **Royalties.** Royalty revenue of $670M grew 8% y/y (last q +22%), missing Street (~$705M) by ~5% and falling short of the low-teens guide. It is the second royalty miss in three quarters. Edge AI (~70% of royalties) was flat y/y because memory costs keep pressuring smartphone units, especially in the mid and lower tiers, and

v9/CSS rate gains only offset that. DC doubled and physical AI grew 50%.

版税。版税收入为$670M，同比增长 8%（上季度+22%），比华尔街预期（~$705M）低~5%，且未达到低十位数的指引。这是三个季度中第二次版税未达预期。边缘 AI（约占版税的 70%）同比持平，因为内存成本持续对智能手机出货量造成压力，尤其是中低端机型，而 v9/CSS 费率的提升仅抵消了这一影响。DC 翻倍，物理 AI 增长 50%。

- **Callback.** The most important callback detail is the FQ4 framework. Mgmt expects total revenue growth similar to FQ3's ~24% (~$1.85B vs. Street ~$1.87B), with more balanced license and royalty growth (license slightly higher). Opex steps up to ~$880M, which pulls most FQ4 EPS models to ~$0.70–0.73 vs. Street ~$0.76. If the ~$90M of AGI CPU revenue most models carry sits inside that total, core IP growth slows to ~18% on a tough license comp. Mgmt also described AGI CPU demand as "well beyond" $2B, with ~$2B of wafer supply secured. It still declined to commit to $2B of revenue, citing first-time chip bring-up and supply-chain risk. Mgmt said DC royalties should pass smartphone royalties within 2–3 years and expects SoftBank's ~$200M per quarter to hold into next year.

回调。最重要的回调细节是 FQ4 框架。管理层预计总收入增速与 FQ3 的 ~24% 相似（约 18.5 亿美元 vs. 华尔街预期 ~$1.87B），授权和版税的增长将更为均衡（授权略高）。营业费用增至 ~$880M，这将使大多数 FQ4 EPS 模型降至 ~$0.70–0.73，而华尔街预期为 ~$0.76。如果大多数模型包含的 ~$90M AGI CPU 收入计入该总收入中，在艰难的授权对比基数下，核心 IP 增速将放缓至 ~18%。管理层还将 AGI CPU 需求描述为"远超" 20 亿美元，并已锁定 ~$2B 的晶圆供应。其仍拒绝承诺 20 亿美元的收入，理由是首次芯片点亮和供应链风险。 管理层表示数据中心版税应在 2–3 年内超过智能手机版税，并预计软银每季度 ~$200M 的投入将维持到明年。

- **Licensing.** License revenue of $773M grew 50% y/y (last q +23%) vs. Street ~$665M and a guide of ~+30%. It landed ~$100M above mgmt's own plan as customers sped up long-term commitments:

授权许可。授权许可收入为 $773M，同比增长 50%（上季度 +23%），而华尔街预期为 ~$665M，指引为 ~+30%。该收入比管理层自身的计划高出 ~$100M，原因是客户加速了长期承诺：

  - 3 new ATAs (>60 active, including one major customer's first) and 4 new CSS licenses (2 DC, 2 smartphone; 29 CSS licensees in total).

3 个新 ATA（活跃 ATA 超 60 个，包括某主要客户的首次采用）和 4 个新 CSS 授权（2 个数据中心，2 个智能手机；总计 29 个 CSS 被授权方）。

- SoftBank contributed $209M (+17% y/y, ~27% of license) and should stay around that level.

软银贡献了 $209M（同比增长 +17%，占授权许可收入的 ~27%），预计将保持在该水平附近。

- ACV grew 12% (last q +13%) to $1.79B vs. Street ~$1.72B. That is far below revenue growth, so recognition timing flattered the print. RPO rose ~$300M q/q to ~$2.4B.

ACV 增长 12%（上季度 +13%）至 17.9 亿美元，而市场预期为 ~$17.2 亿美元。这远低于营收增长，因此确认时机让财报数据显得好看。RPO 环比增加 ~$3 亿至 ~$24 亿。

- FQ3 license is guided “a little over 50%” y/y (~$780M vs. Street ~$700M) and steps up again in FQ4. The CFO called the pipeline “surprisingly strong,” reversing mgmt’s start-of-year view that AI-driven licensing had largely run its course.

FQ3 许可收入指引为同比增长“略高于 50%”（约 7.8 亿美元，而市场预期为 ~$7 亿美元），并在 FQ4 再次攀升。CFO 称销售管道“出人意料地强劲”，扭转了管理层年初认为 AI 驱动的许可业务已基本见顶的观点。

- **Data center.** DC royalties doubled y/y again. ARM’s share of top-hyperscaler server CPU deployments went from 15% in CY24 to >50% in CY25 and is now expected to exceed 60% exiting CY26, a new marker. The drivers are Axion, Graviton, Cobalt and NVIDIA ramps; AWS cited Graviton revenue commitments up >20x y/y. Mgmt now speaks of triple-digit DC royalty growth “over the next number of years,” vs. “double again this year” in May. That growth comes from share gains, rising core counts, more CSS and accelerator head nodes moving from x86 to Arm (Vera Rubin, Axion hosting TPU v8). DC was approaching ~20% of royalties and won’t reach a third by FY27-end, but will “sometime soon.” AMZN, GOOGL and MSFT are the largest contributors, with NVDA ramping quickly. CSS N4 launched (up to 2x perf/socket, +25% perf/W).

数据中心。DC 版税再次同比翻倍。ARM 在顶级超大规模服务商服务器 CPU 部署中的份额从 CY24 年的 15%增至 CY25 年的>50%，目前预计在 CY26 年末将超过 60%，这是一个新里程碑。驱动力来自 Axion、Graviton、Cobalt 和 NVIDIA 的放量；AWS 称 Graviton 收入承诺同比增长>20 倍。管理层现在谈及“在未来几年”版税将实现三位数增长，而 5 月份的说法还是“今年再翻倍”。这种增长源于份额提升、核心数增加、更多 CSS 和加速器头节点从 x86 转向 Arm（Vera Rubin，Axion 托管 TPU v8）。DC 版税占比正接近~20%，且在 FY27 年末前不会达到三分之一，但将在“不久的某个时候”实现。AMZN、GOOGL 和 MSFT 是最大的贡献者，NVDA 的增速非常快。CSS N4 已发布（每插槽性能提升最高 2 倍，能效提升 25%）。

- **Guide.** FQ3 revenue/EPS of $1.54B/$0.56 is ~1% above Street (~$1.52B/$0.55), but the mix is worse: license is guided ~11% above Street and royalties ~7% below. Opex of ~$825M (+15% y/y) is in line to slightly below Street (~$820–860M), implying ~44.4% OM vs. Street ~43–44%. Implied FY27 revenue of ~$6.1B (+~24%) is modestly above Street’s ~$6.06–6.09B pre-print and above the ~20% framed in May. But the mix has flipped vs. that plan, which called for ~20% each: license is tracking mid-30s % growth and royalties low teens.

指引。FQ3 营收/每股收益为 15.4 亿美元/0.56 美元，比市场预期（约 15.2 亿美元/0.55 美元）高出 ~1%，但结构较差：许可业务指引比市场预期高出 ~11%，而特许权使用费比市场预期低 ~7%。运营支出为 ~8.25 亿美元（同比增长 15%），符合或略低于市场预期（约 8.2–8.6 亿美元），意味着 ~44.4% 的营业利润率，而市场预期为 ~43–44%。隐含的 FY27 营收为 ~61 亿美元（增长约 24%），略高于市场预期的 ~60.6–60.9 亿美元（预发布数据），也高于 5 月份设定的 ~20% 的目标。但与该计划相比，结构已发生逆转，该计划要求 ~各占 20%：目前许可业务增长追踪至 30% 中段，而特许权使用费增长为 10% 出头。

- **Margins.** Non-GAAP OM of 44.2% (+310bps y/y) beat Street (~41.5%) by ~270bps on revenue upside. Opex of $774M (+19% y/y) came in slightly under the ~$780M guide and is still climbing ~6–7% q/q as ARM adds engineers for CSS, next-gen platforms and the AGI CPU family. The AGI CPU will dilute a ~98% gross margin. The CFO now frames v1 at “30%–40%” (vs. “high 30s, maybe low 40s” in July), with 50%+ only on the next version as ARM brings more work in-house. GAAP EPS of $0.12 (vs. $0.22 a year ago and Street ~$0.22) reflects ~$376M of SBC (~26% of revenue) and a 37.5% GAAP tax rate.

利润率。非 GAAP 营业利润率为 44.2%（同比 +310 个基点），凭借营收超预期，较华尔街预期（约 41.5%）高出 ~270 个基点。运营支出为 7.74 亿美元（同比 +19%），略低于 ~7.8 亿美元的指引，且仍以 ~6–7% 的环比增速攀升，因为 ARM 正在为 CSS、下一代平台和 AGI CPU 系列招募工程师。AGI CPU 将稀释 ~98% 的毛利率。CFO 现将 v1 的毛利率表述为“30%–40%”（而 7 月份的表述为“30 多高位，可能 40 多低位”），50% 以上的毛利率仅会在下一版本实现，因为 ARM 将把更多工作转为内部完成。GAAP 每股收益为 0.12 美元（而一年前为 0.22 美元，华尔街预期为 ~0.22 美元），反映了 ~3.76 亿美元的 SBC（约占营收的 26%）以及 37.5% 的 GAAP 税率。

- **Competition.** The x86 debate sharpened. AMD raised its server CPU outlook by several billion dollars a day earlier and claims Venice leads on perf/watt. ARM pointed to independent OCP testing showing ~2x perf/rack for the AGI CPU vs. AMD’s prior-gen EPYC 9755. It argued that hyperscalers’ custom Arm SoCs win at the rack level in ways a merchant x86 part cannot. On scale, the CEO conceded the AGI CPU is “our first product,” against AMD’s decades of capacity and supplier relationships, and expects industry supply to stay tight. ARM is relying instead on long-standing TSMC and memory-vendor relationships and a 5–10 year commitment. He also endorsed a $200B+ 2030 CPU TAM (vs. ARM’s own $100B in March), possibly “under-calling it.”

竞争。x86 之争加剧。AMD 在一天前将其服务器 CPU 的营收预期上调了数十亿美元，并声称 Venice 在能效比（perf/watt）上领先。ARM 则援引 OCP 的独立测试，指出其 AGI CPU 在机架性能（perf/rack）上达到 AMD 上一代 EPYC 9755 的~2x。它认为，超大规模数据中心定制的 Arm SoC 在机架层面的优势，是商用 x86 芯片无法企及的。在规模方面，CEO 承认 AGI CPU 是“我们的首款产品”，难以匹敌 AMD 数十年的产能和供应商关系积累，并预计行业供应将持续紧张。ARM 转而依赖长期合作的 TSMC 和内存供应商关系，以及 5 到 10 年的承诺。他还认可 2030 年超 2000 亿美元的 CPU 总潜在市场（TAM）规模（对比 ARM 自身在 3 月给出的 1000 亿美元预测），认为这甚至可能“预测偏保守”。

Bull vs. Bear Debate 多空辩论

The bull thesis is that ARM has become the default CPU architecture of the AI era and is now monetizing that on three fronts at once. First, royalty rates per chip keep rising as customers move from v8 to v9 to CSS, and core counts per chip are doubling with

agentic workloads. Second, ARM is taking share in the fastest-growing compute market. It went from 15% to >50% of top-hyperscaler server deployments in a year, targets >60% exiting CY26, and accelerator head nodes (Vera Rubin, TPU v8, Trainium) are standardizing on Arm. Third, the AGI CPU lets ARM capture the full value of a server CPU rather than a royalty slice. That market's 2030 TAM estimates have doubled to $200B+ within a year because agentic AI is CPU-bound. Bulls see the moat as durable: a 30M+ developer software ecosystem, ~98% IP gross margins, and an ATA/CSS licensing model that locks customers into ARM's roadmap for years.

看多论点认为，ARM 已成为 AI 时代的默认 CPU 架构，并正同时在三个战线实现变现。首先，随着客户从 v8 迁移到 v9 再到 CSS，每颗芯片的版税率持续上升，而每颗芯片的核心数也因智能体工作负载而翻倍。其次，ARM 正在增长最快的计算市场中抢占份额。在一年内，其在顶级超大规模云服务商的服务器部署占比从 15% 升至 50% 以上，目标是到 2026 财年结束时超过 60%，且加速器主节点（Vera Rubin、TPU v8、Trainium）也正标准化采用 Arm。第三，AGI CPU 让 ARM 能够获取服务器 CPU 的全部价值，而不仅仅是版税分成。由于智能体 AI 受限于 CPU，该市场对 2030 年的 TAM 估测在一年内已翻倍至 2000 亿美元以上。 多头认为护城河是持久的：超过 3000 万的开发者软件生态系统、~98%的 IP 毛利率，以及将客户锁定在 ARM 路线图上数年的 ATA/CSS 授权模式。

Mgmt is targeting ~$10B of IP revenue at >65% OM plus ~$15B of silicon revenue by FY31, for >$9 of EPS.

管理层的目标是到 31 财年实现~$10B 的 IP 收入（营业利润率>65%）以及~$15B 的芯片收入，从而实现超过$9 的每股收益（EPS）。

This quarter gave bulls evidence on each leg. The AGI CPU's problem is now supply rather than demand, and that is being solved: signed POs through CY27, signed supply agreements across wafers, substrates, test and memory, a public-cloud channel in OCI, ODM partners and pilot shipments. The "up to $2B" outlook is still ~$0.7–0.8B above pre-print Street numbers, and mgmt explicitly hinted that FY29/FY30 targets go up next spring. License growth of 50%, ~$100M above plan with a pipeline of new rather than renewal deals that mgmt calls "surprisingly strong," leads royalties by 12–24 months. Mgmt's FY28 framework points to royalty growth reaccelerating toward 20%+ next year: double-digit mobile royalty growth even on flat units, triple-digit DC royalty growth for years, physical AI +50%, and memory comps lapping in FQ4.

本季度在各个方面都为多头提供了证据。AGI CPU 的问题现在已从需求转为供给，而这一问题正在解决：已签署截至 CY27 的采购订单，在晶圆、基板、测试和内存方面签署了供应协议，建立了 OCI 的公有云渠道，ODM 合作伙伴以及试出货。“最高 20 亿美元”的前景仍比预披露前的市场预期高出 ~$7–8 亿美元，管理层明确暗示 FY29/FY30 的目标将在明年春季上调。授权业务增长 50%，超出计划 ~$1 亿美元，且由新交易而非续约交易组成的销售渠道被管理层称为“出人意料地强劲”，这将领先版税收入 12–24 个月。 管理层的 FY28 框架指向明年特许权使用费增长重新加速至 20%以上：即使单位销量持平，移动端特许权使用费仍实现两位数增长，DC 特许权使用费连续数年实现三位数增长，物理 AI 增长超 50%，且内存比较基数效应将在 FQ4 消化。

Estimates and the multiple could move higher on AGI CPU pricing headroom on higher-core-count parts, a second-gen chip at 50%+ gross margin, and possible networking, I/O or accelerator additions at the next Arm Everywhere. They could also rise on a re-rating, since the stock is down ~58% from its 52-week high and back to roughly its pre-AGI 2-yr-forward multiple.

估值和倍数可能因 AGI CPU 在更高核心数部件上的定价空间、毛利率超 50% 的第二代芯片，以及在下一次 Arm Everywhere 上可能新增的网络、I/O 或加速器而上调。它们也可能因重新评级而上升，因为该股较 52 周高点下跌了 ~58%，并已回到大致相当于 AGI 之前的 2 年远期市盈率水平。

The bear thesis is that ARM’s highest-quality revenue stream is slowing while growth increasingly rests on lower-quality and less-proven sources, at a valuation that leaves little room for error. Royalties are the recurring stream that justified a premium multiple. They grew 8% this quarter, are guided to LSD growth in FQ3, and will grow only ~12–13% in FY27, vs. ~20% expected six months ago. Edge AI (~70% of royalties) is flat despite the v9/CSS rate tailwind and remains exposed to memory costs that are still pressuring handset units. With v9 penetration already above 50%, the rate lever has less room to run.

看空逻辑在于，ARM 最高质量的收入流正在放缓，而增长日益依赖于质量较低且缺乏验证的来源，且其估值几乎没有容错空间。版税是证明其高估值倍数合理性的经常性收入流。该收入流本季度增长 8%，指引 FQ3 为低个位数增长，且 FY27 仅增长~12–13%，而六个月前的预期为~20%。边缘 AI（约占版税的 70%）表现平淡，尽管有 v9/CSS 费率顺风，但仍受制于仍在压制手机出货量的内存成本。随着 v9 渗透率已超过 50%，费率杠杆的运行空间已所剩无几。

Licensing filled the gap, but it is lumpy and front-loaded on multi-year ATAs (license

+50% vs. ACV +12%). About 27% of it comes from SoftBank, a ~90% owner that has upsized its ARM-backed margin loan to $25B (due Sept 2027) while funding a ~$65B OpenAI commitment. Related-party revenue is 29% of the total. Meanwhile, the AGI CPU puts ARM into direct competition with AMD and Intel as a subscale first-time chip vendor, as the CEO conceded, and alongside its own largest licensees, which build their own Arm CPUs. It carries 30–40% gross margins that dilute a ~98% GM model, and Meta is a concentrated anchor customer.

授权填补了缺口，但分布不均且在多年 ATA 中前期高度集中（授权+50% vs. ACV +12%）。其中约 27%来自软银，这家持股~90%的股东已将其以 ARM 为担保的保证金贷款增至 250 亿美元（2027 年 9 月到期），同时为一项~650 亿美元的 OpenAI 承诺提供资金。关联方收入占总收入的比例达 29%。与此同时，正如 CEO 所承认的，AGI CPU 使 ARM 作为规模不足的首次芯片供应商，与 AMD 和英特尔展开直接竞争，且与其自身最大的授权客户（这些客户自行构建 Arm CPU）同场竞技。该业务 30–40%的毛利率拉低了~98%的毛利模型，而 Meta 则是其高度集中的核心客户。

Several bull assumptions look stretched. DC royalties doubling “over the next number of years” requires hyperscaler capex to stay elevated after Arm share has already passed 60% at the top hyperscalers. Double-digit FY28 mobile royalty growth assumes flat handset units, when some forecasts have CY27 units down high single digits. Mgmt also projected double-digit smartphone royalty growth in July, and edge came in flat this quarter. The AGI CPU outlook is still “up to,” and mgmt won’t commit until February. v1 gross margin guidance has drifted back to 30–40%, and mgmt itself describes wafers, substrates, test and memory as very tight. On licensing, the CFO would not call ~$775M+ per quarter a run rate, and mgmt’s own long-term license growth target is high-single to low-double digits.

几个看多的假设显得有些牵强。DC 版税“在未来几年内”翻倍，需要超大规模厂商的资本支出在头部超大规模厂商的 Arm 份额已经超过 60%之后依然保持高位。28 财年两位数的移动版税增长假设手机出货量持平，而一些预测认为 27 自然年出货量将出现高个位数下滑。管理层在 7 月份也曾预测智能手机版税将实现两位数增长，但本季度边缘端表现却持平。AGI CPU 的前景仍是“最高可达”，且管理层要到 2 月份才会做出承诺。v1 毛利率指引已回落至 30–40%，管理层自身也将晶圆、基板、测试和内存描述为非常紧张。在授权业务方面，CFO 不愿将每季度~$775M+称为常态运行率，而管理层自身的长期授权增长目标也仅为高个位数至低双位数。

COHR -3%: FQ1'27 was a modest beat with better DC and

worse industrial, slightly better guide

COHR -3%：FQ1'27 业绩小幅超预期，DC 表现更好，工业表现较差，指引略有上调

Overall, solid print for what many had used as a funding short for their LITE longs until the MRVL bid.

总体而言，这是一份稳健的财报；在 MRVL 出价之前，许多人曾将其作为做多 LITE 的融券做空标的。

DC& Comms (+79% y/y) drove F1Q, and the Dec-Q guide beat the bogeys ($2.65B mid vs. ~$2.60-2.64B) with profit in line (op income ~$627-646M at the mids vs. ~$636M at the bogeys). The firsts: >$100M of PhotonLink (CPO) revenue in the March-Q, a ~$20B, five-year PhotonLink LTA from CY28 (customer unnamed), and FY27 pro forma growth >60%, which puts it at >~$11.2B on the ~$7.0B FY26 base vs. Street $10.63B. On GM, the worry going in, the 6-inch InP savings behind the new >45% target (by end-CY28) are still ahead: the CEO wouldn't give the internal/external laser mix but said it's "about the same" as a year ago, as doubled InP output kept pace with transceiver growth.

DC& Comms（同比增长 79%）推动了第一财季业绩，且 12 月季度的指引优于预期（中值 26.5 亿美元，对比预期 26.0-26.4 亿美元），利润符合预期（运营收入中值 6.27-6.46 亿美元，对比预期 6.36 亿美元）。多项首次：3 月季度 PhotonLink（CPO）收入超过 1 亿美元；从 2028 财年起的一份为期五年、价值 200 亿美元的 PhotonLink 长期协议（客户未披露）；以及 2027 财年备考增长超过 60%，这意味着在 2026 财年 70 亿美元的基础上达到约 112 亿美元以上，对比市场预期的 106.3 亿美元。关于毛利率这一此前的担忧，支撑 2028 财年末前超过 45% 这一新目标的 6 英寸 InP 节省效应仍未到来：CEO 未透露内部/外部激光器的比例，但表示与一年前"大致相同"，因为翻倍的 InP 产量跟上了光模块的增长步伐。

Asked about DC worries the CEO said "almost every LTA" carries an upfront customer payment to help fund capacity. Overall, better than feared, and it de-risks 2027-28 demand. Stock trading down with semis

当被问及对资本支出的担忧时，CEO 表示"几乎每一份 LTA"都包含预付客户款项，以帮助资助产能。总体而言，情况好于预期，这降低了 2027-28 年需求的风险。该股随半导体板块一同下跌。

Key Takeaways

- **Margins.** This was the headline change. Mgmt now targets its first quarter of >45% non-GAAP GM before CY28-end. That is 300 bps above the >42% target set at the investor day ~18 months ago (then framed as a 3-4 year goal) and well above Street FY28 GM of ~41%. In August the CFO said COHR would raise the target once it reached 42%; it raised it before getting there (FQ2 guide midpoint 41%, +40 bps q/q). Going from 41% to 45% in ~8 quarters takes ~50 bps a quarter, vs. ~40 bps in FQ1 and FQ2. Mgmt ranked the drivers: (1) new product ramps (PhotonLink, DCI, OCS), (2) full operating leverage of 6-inch InP, (3) pricing optimization and (4) cost reductions. The target assumes no gating of transceiver growth. The key nuance is that the internal InP mix hasn't moved in a year (see quotes), so the cheapest lever hasn't been pulled. Mgmt called 45% "a stop along the way," and pricing was again a large contributor in FQ1. For sizing, each 100 bps of GM on ~$15B of revenue is worth ~$0.60 of EPS.

利润率。这是最核心的变化。管理层目前的目标是在 28 日历年底前首次实现>45%的非 GAAP 毛利率。这比 18 个月前投资者日设定的>42%目标（当时被设定为 3-4 年目标）高出 300 个基点，也远高于华尔街预测的 28 财年 41%的毛利率。8 月份时，CFO 曾表示 COHR 一旦达到 42%就会上调目标；而如今在尚未达到该水平前就上调了（FQ2 指引中值 41%，环比+40 个基点）。在 8 个季度内从 41%提升至 45%，需要每季度提升 50 个基点，而 FQ1 和 FQ2 为每季度 40 个基点。管理层对驱动因素进行了排序：(1) 新产品放量（PhotonLink、DCI、OCS），(2) 6 英寸 InP 的全面经营杠杆，(3) 定价优化，以及 (4) 成本削减。该目标假设收发器增长不受限制。 关键细节在于，内部 InP 组合一年来未发生变动（见报价），因此最廉价的杠杆尚未动用。管理层称 45%"只是途中的一个节点"，且定价再次成为 FQ1 的重要贡献因素。就规模而言，在 ~$15B 的营收上，每 100 个基点的毛利率相当于 ~$0.60 的每股收益（EPS）。

Opex leverage continues: 17.4% of revenue vs. 18.4% last q, and the FQ2 guide implies ~16.6%. Still, FQ1 opex of $412M and the FQ2 opex guide of $430-450M were both above Street (~$399M and $410-425M).

运营杠杆持续显现：占营收的 17.4%，而上季度为 18.4%，且 FQ2 指引暗示为 ~16.6%。尽管如此，FQ1 运营支出 4.12 亿美元及 FQ2 运营支出指引 4.30-4.50 亿美元均高于华尔街预期（分别约为 3.99 亿美元和 4.10-4.25 亿美元）。

- **Callback.** The most important callback takeaways were on the LTA. It is a specific NPO design win, not a framework agreement, and the customer already has samples. It carries a take-or-pay element and an upfront payment. The customer is a recognizable brand name that is not NVDA, and the deal is not an extension of the NVDA relationship. Early CY28 is the customer's timeline (COHR "could ship sooner"). The 400mW laser anchors the deal and pulls through isolators, multi-core fiber, TECs and other PhotonLink BOM. Mgmt said the NVDA deal "takes almost all of the PhotonLink portfolio" and the new LTA will look the same, so attach rate matters more than laser ASP. Notably, this NPO commitment is anchored by an InP CW laser, even though mgmt also expects VCSEL-based NPO from early 2028. Mgmt laid out an InP allocation order: PhotonLink first because it is GM-accretive, then transceivers, with external laser chips filling the gap.

  回调。最重要的回调要点在于 LTA。这是一项具体的 NPO 设计定点，而非框架协议，且客户已拥有样品。该协议包含照付不议条款和预付款。客户是一家知名品牌，并非 NVDA，且该交易并非 NVDA 关系的延伸。2028 年初是客户的时间线（COHR"可以更早发货"）。400mW 激光器锚定了该交易，并带动了隔离器、多芯光纤、TEC 及其他 PhotonLink BOM 的搭售。管理层表示，NVDA 的交易"几乎涵盖了 PhotonLink 的全部产品组合"，而新的 LTA 也将如此，因此搭售率比激光器 ASP 更重要。值得注意的是，尽管管理层也预计从 2028 年初起将出现基于 VCSEL 的 NPO，但此项 NPO 承诺是由 InP CW 激光器锚定的。 管理层列出了 InP 的分配顺序：PhotonLink 优先，因为其能增厚毛利率，其次是收发器，外部激光芯片则用于填补缺口。

  It confirmed transceivers run below the corporate-average GM and said the plan is to lift them through insourcing rather than cap their growth. It also said 1.6T grows much faster than 800G in 2027, with the crossover in CY28. Finally, it called scale-up entirely greenfield; scale-out CPO overlaps somewhat with transceivers at first but won't meaningfully shrink the transceiver opportunity.

  其证实了收发器的毛利率低于公司平均水平，并表示计划通过内部制造来提升毛利率，而非限制其增长。其还表示，2027 年 1.6T 的增速远快于 800G，并将在 28 自然年实现交叉。最后，其称纵向扩展完全是增量市场；横向扩展 CPO 初期与收发器有一定重叠，但不会显著缩减收发器的市场机会。

- **PhotonLink.** COHR signed a ~$20B, 5-year PhotonLink LTA with a "leading AI

datacenter customer," in addition to the NVDA LTA, with revenue ramping from early CY28. It is anchored by the 400mW CW laser but covers a broader set of PhotonLink content, and mgmt expects to sign more PhotonLink LTAs. Near term, PhotonLink revenue should exceed $100M in the March quarter and $250M a quarter (a ~$1B run rate) before CY27-end. In August, the only guidepost was initial revenue in the December quarter. Initial shipments are CPO scale-out; CPO and NPO scale-up shipments start in 2H CY27, and scale-in chip-to-chip comes in 2029-2030. Engagements stand at >10 CPO, >10 NPO and >5 chip-to-chip. Mgmt now sizes CPO/NPO/chip-to-chip at ~$30B by 2030, inside a ~$90B DC&C TAM. On the August call it was more than $15B "over the coming years," with no date attached. COHR content can reach ~$15K per 100T XPU or switch chip with the full portfolio. Mgmt sees only one other supplier of high-power CW lasers.

PhotonLink. COHR 签署了一项价值~$200 亿、为期 5 年的 PhotonLink LTA，客户为"一家领先的 AI 数据中心客户"，这是在 NVDA LTA 之外新增的，收入将从 2028 日历年年初开始爬坡。该协议以 400mW CW 激光器为基石，但涵盖了更广泛的 PhotonLink 产品组合，管理层预计将签署更多 PhotonLink LTA。短期内，PhotonLink 收入在 3 月季度应超过 1 亿美元，并在 2027 日历年年底前达到每季度 2.5 亿美元（~$10 亿美元的运行率）。在 8 月份，唯一的指引是 12 月季度的初始收入。初始出货为 CPO 横向扩展；CPO 和 NPO 纵向扩展出货于 2027 日历年下半年开始，而纵向收缩的芯片间互联将于 2029-2030 年到来。目前合作项目超过 10 个 CPO、超过 10 个 NPO 以及超过 5 个芯片间互联。管理层目前预计，到 2030 年 CPO/NPO/芯片间互联的市场规模将达到~$300 亿，包含在~$900 亿美元的 DC&C TAM 之内。 在 8 月的电话会议上，该数字是"未来几年"超过 150 亿美元，未附具体日期。凭借完整产品组合，COHR 内容的收入可达每 100T XPU 或交换芯片 ~$15K。管理层认为高功率 CW 激光器只有另一家供应商。

The September launch had flagged that an NPO LTA was signed; the size is new.

9 月的发布曾透露签署了一份 NPO LTA；其规模则是新信息。

On concentration, the new LTA averages ~$4B a year, more than half of FY26 revenue, from a single program.

关于集中度，新的 LTA 平均每年 ~$40B，占 26 财年收入的一半以上，且来自单一项目。

- **Guide.** The FQ2 midpoint of $2.65B (+12% q/q, +57% y/y) and $2.38 of EPS are

~4% and ~6-8% above Street, with DC, Comms and Industrial all expected to grow q/q. FY27 pro forma growth above 60% is more than 2x FY26's ~28%. Street sits at $10.6-10.7B, which is ~50% growth on reported FY26 revenue or ~52-53% on the pro forma base. The guide implies at least $11.2B of revenue and a 2H average of at least $3.1B a quarter. That means the reiterated first $3B quarter "by the end of fiscal 2027" could come as early as the March quarter. New this quarter is the "clear line of sight" to a first $4B quarter in FY28, which mgmt said is underpinned by supply agreements and internal InP capacity. That marker is roughly in line with pre-print Street FY28 revenue of ~$14.7B. Taken literally, a first $4B quarter as late as June 2028 would mean growth slowing to ~20-35% y/y, so the market will treat it as a floor, not a raise.

指引。第二财季中点为 26.5 亿美元（环比增长 12%，同比增长 57%）和每股收益 2.38 美元，分别比 ~4% 和 ~6-8% 高于市场预期，预计数据中心、通信和工业业务均将实现环比增长。2027 财年备考增长超过 60%，是 2026 财年 ~28% 的两倍多。市场预期为 106-107 亿美元，这相当于按 2026 财年报告营收计算的 ~50% 增长，或按备考基础计算的 ~52-53%。指引意味着营收至少为 112 亿美元，下半年平均每季度至少为 31 亿美元。这意味着重申的"在 2027 财年底前"实现首个 30 亿美元季度的目标最早可能在 3 月季度实现。本季度的新看点是 2028 财年首个 40 亿美元季度拥有"清晰的可见度"，管理层称这得益于供应协议和内部 InP 产能。这一指标与财报前市场对 2028 财年 ~147 亿美元的营收预期大致一致。 从字面上理解，最迟到 2028 年 6 月才实现首个 40 亿美元季度，将意味着增速放缓至同比~20-35%，因此市场会将其视为下限，而非上调。

- **Scale-across.** This was newly disclosed: scale-across/DCI revenue exceeded $200M in FQ1 (+53% q/q, ~4x y/y), a nearly $1B run rate. It is now the largest piece of Communications, which grew +84% y/y (last q +56%) and +34% q/q. Mgmt expects quarterly scale-across revenue to roughly double (to ~$400M) by CY27-end. The growth so far comes before MultiRail, which starts ramping in the March quarter. COHR sells at three levels of the value chain: components such as pump lasers; ZR+ modules, line cards, amplifiers and ROADMs; and complete solutions. It sells to both equipment makers and hyperscalers directly, and mgmt admitted the growth "surprised us a little bit." On the callback, mgmt said it is using scarce components such as pump lasers as leverage to upsell subsystems and systems.

跨规模。这是最新披露的数据：跨规模/DCI 收入在 FQ1 超过 2 亿美元（环比+53%，同比~4 倍），年化运行率接近 10 亿美元。它目前是通信业务中最大的一部分，该业务同比增长 84%（上季度+56%），环比增长 34%。管理层预计到 27 年底，季度跨规模收入将大致翻倍（至~$400M）。目前的增长发生在 MultiRail 之前，后者将于 3 月季度开始放量。COHR 在价值链的三个层级进行销售：如泵浦激光器等组件；ZR+模块、线卡、放大器和 ROADM；以及完整解决方案。它同时直接向设备制造商和超大规模客户销售，管理层承认这种增长“让我们有点惊讶”。在回拨电话中，管理层表示正在利用泵浦激光器等稀缺组件作为筹码，来向上销售子系统和系统。

Bull vs. Bear Debate 多空之争

Bulls see COHR as the broadest and most vertically integrated photonics platform in a market moving from discrete optical components to integrated optical systems. They count three stacked demand drivers: scale-out pluggables (800G to 1.6T to 3.2T), scale-across DCI, and the move of scale-up and eventually chip-to-chip links from copper to optics, which is entirely greenfield. The scarce input across all three is InP laser capacity, especially UHP CW lasers, where COHR sees one competitor. Mgmt has said a 6-inch InP wafer yields ~4x the output of a 3-inch wafer at about half the cost, with better yields, which lets COHR add that capacity faster and cheaper than peers. MRVL’s $115B all-stock bid for LITE strengthens the setup. Transformational M&A tends to turn the combined company inward while competitors take share. Customers that don’t want their optics supplier owned by a chip competitor have one obvious alternative, and COHR becomes a scarce strategic asset.

多头将 COHR 视为在从分立光组件向集成光系统转变的市场中，最广泛且垂直整合程度最高的光子平台。他们列举了三个叠加的需求驱动因素：横向扩展的可插拔器件（800G 到 1.6T 再到 3.2T）、跨数据中心互联（DCI）的扩展，以及纵向扩展乃至最终从铜线向光互连的芯片间连接转变，这完全是全新市场。这三者共同的稀缺资源是 InP 激光器产能，尤其是超高性能（UHP）连续波（CW）激光器，COHR 在此领域只看到一家竞争对手。管理层表示，6 英寸 InP 晶圆的产量约为 3 英寸晶圆的 4 倍，成本约为后者的一半，且良率更高，这使得 COHR 能够比同行更快、更低成本地增加产能。MRVL 以 1150 亿美元全股票收购 LITE 的要约强化了这一格局。 转型并购往往会让合并后的公司将注意力转向内部，而竞争对手则趁机抢占市场份额。不希望其光学元件供应商被芯片竞争对手拥有的客户有了一个显而易见的替代选择，而 COHR 则成为稀缺的战略资产。

The demand backdrop supports this: the largest AI spenders' capex rose ~20% q/q in CQ3 to ~$227B and CY26 is tracking ~$800B+. Alphabet and Amazon are signaling meaningfully higher 2027 spend, and Meta says it will keep investing aggressively.

需求背景也印证了这一点：最大的 AI 支出者的资本支出在 CQ3 环比增长 ~20%，达到~$227B，且 CY26 预计将超过~$800B。Alphabet 和 Amazon 释放出 2027 年支出将大幅增加的信号，而 Meta 表示将继续积极投资。

This quarter gave bulls the two things they lacked: a margin mechanism and multi-year visibility. The >45% GM target comes with an explanation for why 6-inch hasn't shown up yet (the internal mix has been flat for a year). It is also backed by accretive new products and by pricing that is fixed for the life of most LTAs. Bulls note that COHR may be on the same margin path LITE took once its higher-margin products took off. Visibility now runs into CY28: CY27 is booked, orders extend into CY28, and LTAs carry take-or-pay terms and upfront payments. The $20B LTA shows PhotonLink is not an NVDA-only story. Its NPO design, anchored on an InP CW laser, shows NPO will pull InP lasers too, not only GaAs VCSELs. On a bandwidth basis, the $15K-per-100T content figure scales to a roughly $16B annual opportunity on NVDA's Rubin Ultra alone in 2028 if COHR captured full content. Bulls see three forces driving the stock higher.

本季度给了多头他们所缺乏的两样东西：利润率机制和多年的可见性。>45% 的毛利率目标附带了对 6 英寸为何尚未出现的解释（内部产品组合已持平一年）。它还得到了增值新产品以及大多数长协协议（LTA）期限内固定价格的支持。多头指出，COHR 可能正走在 LITE 曾经走过的同一条利润率路径上，后者的高利润率产品曾一度起飞。可见性现已延伸至 28 历年：27 历年已订满，订单延伸至 28 历年，且 LTA 带有照付不议条款和预付款。200 亿美元的 LTA 表明 PhotonLink 并非只与 NVDA 有关。其以 InP CW 激光器为核心的 NPO 设计表明，NPO 也将拉动 InP 激光器，而不仅是 GaAs VCSEL。 按带宽计算，如果 COHR 能获取全部份额，每 100T 内容 1.5 万美元的指标换算下来，仅 NVDA 的 Rubin Ultra 在 2028 年就将带来约 160 亿美元的年度市场机会。看多者认为有三大驱动力将推高该股。

First, estimates rise as Street models (FY27 revenue of $10.6-10.7B, FY28 GM ~41%) converge on mgmt's framework (>60% pro forma growth and >45% GM), with every 100 bps of GM worth ~$0.60 of EPS at FY28 revenue levels. Second, scale-across and PhotonLink milestones arrive quarterly starting in March. Third, the multiple, ~12x CY28 Street EPS after a >40% drawdown, re-rates toward COHR's ~19x average since 2016 as CY28 visibility firms up.

首先，随着华尔街模型（27 财年收入 106-107 亿美元，28 财年毛利率 ~41%）向管理层框架（>60%的备考增长和>45%的毛利率）靠拢，盈利预测将上调，在 28 财年收入水平下，每 100 个基点的毛利率相当于~0.60 美元的每股收益。其次，跨平台规模化和 PhotonLink 的里程碑将从 3 月起按季度陆续实现。第三，在经历了>40%的回撤后，基于 CY28 华尔街每股收益~12 倍的估值倍数，将随着 CY28 能见度的巩固，向 COHR 自 2016 年以来~19 倍的平均水平重估。

Bears see COHR as a cyclical optical components company enjoying a supply-constrained pricing window that is at or near its peak. To them, the most important datapoint of the week was LITE, not COHR's print. LITE agreed to sell itself for stock at a ~24% premium after spending its deal call arguing its own fundamentals are very strong, including >100% growth next year. Bears read that as the most sophisticated merchant InP laser seller cashing out before supply catches up in CY28, as 6-inch ramps at COHR and others, Chinese CW and EML capacity, and SiPho and VCSEL alternatives arrive. If InP flips from supply- to demand-constrained, "pricing optimization," one of mgmt's top GM drivers, reverses. Demand concentration is the other structural risk. DC&C is 82% of revenue and depends on a handful of hyperscalers and AI labs whose capex is increasingly debt-financed and politically contested. On Nov.

看空者将 COHR 视为一家周期性的光学组件公司，正享受着一个受供给约束的定价窗口期，而该窗口期已处于或接近顶峰。对他们而言，本周最重要的数据点是 LITE，而不是 COHR 的财报。LITE 同意以股票形式被收购，溢价 ~24%，而在此前的并购电话会议上，它还在强调自身基本面非常强劲，包括明年 >100% 的增长。看空者将其解读为：最成熟的商用 InP 激光器卖家在 CY28 供给跟上之前套现离场，因为届时 COHR 等公司的 6 英寸产能将爬坡，中国 CW 和 EML 产能将释放，且 SiPho 和 VCSEL 替代方案也将问世。如果 InP 从供给约束转为需求约束，"定价优化"（管理层推动毛利率的首要驱动力之一）就会发生逆转。需求集中度是另一项结构性风险。 DC&C 占营收的 82%，且依赖于少数几家超大规模云服务商和 AI 实验室，而这些企业的资本支出正日益依赖债务融资，并面临政治争议。On Nov.

3, voters passed more than 20 local measures banning or restricting data centers out of ~41 on ballots nationwide, including in at least 14 Ohio municipalities. Microsoft cut its calendar-year capex outlook to ~$170B on third-party DC delays. And LTAs have a mixed record of protecting suppliers when cycles turn, so bears give little credit to contracted visibility.

3 日，选民通过了 20 多项地方性措施，禁止或限制数据中心建设，占全美选票~41 项，其中至少包括俄亥俄州的 14 个自治市。由于第三方 DC 延期，微软将其财年资本支出预期下调至~$170B。此外，当周期转向时，LTA 在保护供应商方面的记录参差不齐，因此看空者对合同可见性给予的认可微乎其微。

The quarter gave bears plenty to work with. Cash intensity is rising fast: FCF was -$868M, capex hit 33% of revenue and is still rising, inventory grew 29% q/q to ~211 days, and payables stretched. Debt rose $778M, taking leverage from 0.7x to 1.1x in one quarter, which is why some on the Street are openly asking about a capital raise. The upside is back-end loaded into the exact period bears worry about. The $20B LTA starts in early CY28 on the customer's timeline, scale-up shipments start in 2H CY27, and the 45% GM target is for a single quarter "before the end of calendar 2028." The first $4B quarter in FY28 is merely in line with Street and implies sharp deceleration. Industrial missed, OCS remains undisclosed, and opex came in above Street. Bulls' assumptions look optimistic in several places: 50 bps of GM expansion a quarter must come while below-average-margin transceivers remain the bulk of revenue and PhotonLink gets first call on internal InP & The insourcing shift has been promised, but the mix hasn't moved in a year.

看涨假设在多个方面显得过于乐观：在低于平均毛利的光收发器仍占营收大头，且 PhotonLink 对内部 InP 拥有优先调用权的情况下，每季度必须实现 50 个基点的毛利率扩张；内部化转型虽已承诺，但产品组合在过去一年中并未发生变化。

FIG -7%: AI usage is inflecting, but a ~33% exit rate and softer forward guide/metrics leave FY27 durability unresolved and the AI debate alive

FIG -7%：AI 使用量正在拐头向上，但 ~33% 的退出率以及疲软的前瞻指引/指标使得 FY27 的可持续性悬而未决，关于 AI 的争论仍在继续。

Revenue and the 4Q guide ($403M at the mid) landed in line with the bogeys, but the AI push hit margins, and NDR slid to 131% (vs. ~133-134% bogeys). The worry going in was August's credit repricing (more credits per add-on, same price). Asked whether

it hit NDR, the CFO conceded “a potential impact there to near-term NDR” and said FIG would trade “near-term growth for that long-term growth durability.” He put the 4Q decel (to +33% from +43%) on repriced credits taking time to monetize and the 1Q25 pricing change lapping through 1Q27. He gave no 4Q GM after 3Q’s 82.0% (vs. ~82.5-83.5% bogeys), no 2027 view and, on seats vs. credits, only “good reason for folks today to hold a seat.”

营收及四季度指引（中值 4.03 亿美元）均符合预期，但 AI 推进拖累了利润率，且 NDR 下滑至 131%（而预期为~133-134%）。此前的担忧在于 8 月的额度重新定价（附加项提供更多额度，价格不变）。当被问及这是否影响了 NDR 时，CFO 承认“对近期 NDR 存在潜在影响”，并表示 FIG 将“以短期增长换取长期增长的持久性”。他将四季度的减速（从+43%降至+33%）归因于重新定价的额度需要时间来变现，以及 25 年一季度的定价调整影响将持续至 27 年一季度。在三季度 82.0%（而预期为~82.5-83.5%）的数据之后，他未给出四季度毛利率指引，未提供 2027 年展望，且在席位与额度的关系上，仅表示“如今人们有充分理由保留席位”。

FIG continues to be a software funding short and this print likely doesn’t change that. Bulls will note pay-as-you-go credits don’t count in NDR. Bears will lean on 4Q OI: the raised FY guide implies ~$25M, in line with Street but about half of 3Q’s $47M. Overall, not the clean beat a funding short needed, and repricing debate remains alive and well.

FIG 仍然是软件融资做空标的，而此次财报发布可能不会改变这一点。多头会指出按需付费（pay-as-you-go）的额度不计入 NDR。空头则会依赖四季度新增订单（OI）：上调后的全年指引隐含 ~$25M，与市场预期一致，但约为三季度 $47M 的一半。总体而言，这不是融资做空标的所需要的干净超预期，且重新定价的争论依然激烈。

The #s:

- **Revenue:** $391.4M, +42.8% y/y (last q +48.2% y/y) vs. Street $377M, +~37.5%

  营收：$391.4M，同比+42.8%（上季度同比+48.2%），对比市场预期 $377M，同比+~37.5%

- **EPS:** $0.10 vs. Street $0.05–0.06

  EPS：$0.10，对比市场预期 $0.05–0.06

- **Non-GAAP OM:** 12.0% vs. Street ~6% (5.7–6.1%)

  非 GAAP 运营利润率：12.0%，对比市场预期 ~6%（5.7–6.1%）

- **Non-GAAP GM:** 82.0% vs. Street ~81.0–81.6%

  非 GAAP 毛利率：82.0% vs. 街道预期 ~81.0–81.6%

- **4Q Revenue Guide:** $402–404M, midpoint $403M, +32.7% y/y vs. Street $391M, +~28.7%

  四季度营收指引：4.02–4.04 亿美元，中值 4.03 亿美元，同比+32.7% vs. 街道预期 3.91 亿美元，+~28.7%

- **FY26 OI Guide:** $158–163M, 10.7% OM vs. Street ~$135M, ~9.2%

  26 财年营业利润指引：1.58–1.63 亿美元，营业利润率 10.7% vs. 街道预期 ~1.35 亿美元，~9.2%

Key Takeaways

- **Guide.** The 4Q guide of $402–404M (+32.7% at the midpoint) is $12M above Street's $391M (+28.7%). The $33M FY26 raise to $1.497–1.499B (+41.9% vs. Street $1.470B, +39.2%) has two parts: the ~$17M 3Q beat vs. the guide midpoint, plus ~$16M added to 4Q. The problem is the shape. The guide implies just +$11.6M q/q (+3.0%), vs. $21–37M added in each of the last four quarters, and a ~33% exit. Part of that is the 1Q25 pricing roll-off hitting the large 4Q renewal cohort; it won't fully lap until 1Q27. Mgmt says it enters 4Q with "more knowns than unknowns" (Agent GA, repricing data, most products now on paid credits). That reverses 2Q, when beta products were explicitly excluded from the guide and framed as upside. It also implies less cushion than the 4–6% beats over the high end of the guide in 2026. The $31M FY26 OI raise to $158–163M (10.7% OM vs. Street ~$135M/9.2%) is mostly the 3Q beat. Implied 4Q OI of ~$25M (~6.3% OM, vs. 14.5% a year ago) is only in line with Street's ~$24M.

指引。第四季度指引为 4.024–4.04 亿美元（中值同比增长 32.7%），较华尔街预期的 3.91 亿美元（同比增长 28.7%）高出 1200 万美元。2026 财年上调的 3300 万美元至 14.97–14.99 亿美元（同比增长 41.9%，对比华尔街预期的 14.70 亿美元，同比增长 39.2%）包含两部分：~1700 万美元的第三季度超出指引中值，加上~1600 万美元被计入第四季度。问题在于形态。该指引意味着环比仅增加 1160 万美元（+3.0%），而过去四个季度每季增加的金额为 2100–3700 万美元，且~33%的退出率。部分原因在于 2025 年第一季度价格下调冲击了庞大的第四季度续约群体；直到 2027 年第一季度才能完全消化。管理层表示，进入第四季度时“已知多于未知”（Agent GA、重新定价数据、大多数产品现已采用付费积分）。这与第二季度相反，当时测试版产品被明确排除在指引之外，并被界定为上行空间。这也意味着缓冲比 2026 年指引上限超出 4–6% 的幅度更小。26 财年 3100 万美元的 OI 上调至 1.58–1.63 亿美元（OM 10.7%，而 Street 预期为 ~$135M/9.2%）主要来自三季度的超预期表现。隐含的四季度 OI 为 ~$25M（OM 约 6.3%，而一年前为 14.5%），仅与 Street 预期的 ~$24M 持平。

No FY27 commentary. 无 27 财年评论。

- **Callback.** The most important takeaway: mgmt expects 4Q to land closer to guidance than in prior quarters. The guidance philosophy is unchanged and upside is still possible, but Agent and Code Layers assumptions rest on only ~4 weeks of adoption data. Expect the 4–6% beat cadence to narrow. Other points:

  回拨。最重要的结论：管理层预计四季度业绩将比前几个季度更接近指引。指引理念未变，仍有可能上行，但 Agent 和 Code Layers 的假设仅基于 ~4 周的采用数据。预计 4–6% 的超预期幅度将收窄。其他要点：

  - **GM:** FIG is not entering 4Q with a large AI beta, so the setup resembles 1Q→2Q, when GM rose ~250bps. Mgmt prioritizes GP dollars over a margin target and is still deciding how much first-party model savings to keep vs. pass through.

    GM：FIG 并非带着较大的 AI 贝塔进入第四季度，因此其布局类似第一季度→第二季度，当时 GM 上涨了 1001#250bps。管理层优先考虑 GP 美元而非利润率目标，仍在决定保留多少第一方模型节省的成本，以及将多少转嫁给客户。

  - **Deferred revenue/RPO:** both should step up in the heavier 4Q/1Q renewal quarters. Monthly customers (~25% of the business) add billings variability.

递延收入/RPO：两者在第四季度/第一季度这两个较重的续费季度均应有所上升。月度客户（约占业务的 25%）增加了账单的波动性。

- **Consumption vs. revenue:** consumption won't translate proportionally into revenue near term because add-on allotments rose 60–100%. Drawdowns change timing more than economics, since faster consumption pulls forward both revenue and inference cost.

用量与收入：由于附加配额增加了 60–100%，短期内用量不会按比例转化为收入。提款更多是改变时机而非经济实质，因为更快的消耗会提前拉动收入和推理成本。

- **Customer adds:** cohort adds moderated partly on pricing comps and delayed credit monetization. Smaller-customer momentum remains solid.

客户增量：群组增量部分因价格基数和信贷变现延迟而放缓。较小客户的势头依然稳固。

- **Demand.** Revenue of $391.4M grew +42.8% y/y (last q +48.2%), beating Street's ~$377M by ~4%. It cleared the high end of the guide by $16.4M (4.4%), vs. $20.1M (5.7%) in 2Q. This ends a three-quarter acceleration streak, and the sequential add slowed to $21M from $37M. Drivers were renewals, seat expansion and upgrades: ~2/3 of $10K+ customers added full seats at renewal (steady with prior quarters). Gross retention stayed in the mid-to-high 90s. Mix keeps moving upmarket: $10K+ customers are now ~70% of ARR vs. 64% in 1Q25, and no customer is >10% of revenue.

需求。收入为 3.914 亿美元，同比增长+42.8%（上季度+48.2%），超出华尔街~3.77 亿美元的预期~4%。其超出指引上限 1640 万美元（4.4%），而二季度超出 2010 万美元（5.7%）。这终结了连续三个季度的加速势头，且环比增量从 3700 万美元放缓至 2100 万美元。驱动力来自续约、席位扩张和升级：~2/3 的 1 万美元以上客户在续约时增加了完整席位（与前几个季度持平）。毛留存率保持在 90%中高位。客户组合持续向高端市场转移：1 万美元以上客户目前占 ARR 的~70%，而 25 年一季度为 64%，且没有客户占比超过收入的 10%。

- **Forward metrics.** Every forward indicator softened:

前瞻指标。所有前瞻指标均有所走软：

- NDR fell to 131% (136% in 2Q, 139% in 1Q), matching its post-IPO low.

NDR 降至 131%（二季度为 136%，一季度为 139%），触及 IPO 以来的低点。

- Billings were $391.2M, +24.4% y/y (last q +33.7%) vs. Street ~+32%.

账单收入为 3.912 亿美元，同比+24.4%（上季度+33.7%），而华尔街预期为~+32%。

- RPO of $677.5M declined q/q (+~31% y/y), and deferred revenue was flat q/q.

6.775 亿美元的 RPO 环比下降（同比+约 31%），递延收入环比持平。

- $10K+ customers grew +28% (last q +34%) on +602 net adds, and $100K+ customers grew +36% (last q +46%) on +82. Both are six-quarter lows.

$10K+客户增长+28%（上季度+34%），净增 602 个；$100K+客户增长+36%（上季度+46%），净增 82 个。两者均创六个季度新低。

Mgmt attributed the billings/RPO softness to three things: renewal seasonality created by the 1Q25 pricing change (1Q and 4Q are now the big renewal quarters), a monthly book that doesn't flow through deferred revenue the same way, and credit repricing that "did trade off some near-term revenue." Two points matter for modeling. Mgmt conceded AI pricing choices could hurt near-term NDR. And pay-as-you-go consumption won't count in NDR, so the metric will increasingly understate expansion as consumption scales.

管理层将账单/RPO 的疲软归因于三点：由 25 年第一季度定价调整造成的续约季节性（第一季度和第四季度现成为续约大季）、按月计费的账目不以相同方式计入递延收入，以及信用重新定价"确实牺牲了部分近期收入"。有两点对建模至关重要。管理层承认 AI 定价选择可能会损害近期的 NDR。而且按需付费的消费量将不计入 NDR，因此随着消费规模扩大，该指标将日益低估扩张情况。

- **AI.** Agent GA (Oct 6) produced the most important new data:

AI。Agent GA（10 月 6 日）产生了最重要的新数据：

- Weekly credit consumption (ex-beta) rose 2.5x from GA through Oct 31.

每周信用点消耗量（不含测试版）自正式发布至 10 月 31 日增长了 2.5 倍。

- 65% of $10K+ customers used Agent weekly, vs. >50% at end-July.

65%的 1 万美元以上客户每周使用 Agent，而 7 月底时该比例超过 50%。

    - 80% of Org/Enterprise users consuming beta credits kept consuming after GA, and >95% remain active.

      80%消耗测试版信用点的组织/企业用户在正式发布后继续消耗，且超过 95%保持活跃。

  - Weekly credit-consuming users in the $10K+ cohort rose ~50% since July 1.

    1 万美元以上群体中每周消耗信用点的用户自 7 月 1 日以来增长了~50%。

- **Breadth is flat:** >80% of $10K+ customers consume credits weekly, the same as 2Q. So the incremental story is depth. The tech-infra customer cited at 5x its initial add-on in 2Q is now >7x after signing a drawdown. A global payments company went ~8x in five months, and a pharma company >6x in six months. Code Layers (open beta Oct 14, rolled to all users this week) already consumes credits. There is still no AI revenue disclosure, and mgmt was explicit that consumption converts to revenue with a lag.

  广度持平：超过 80%的 1 万美元以上客户每周消耗额度，与二季度相同。因此，增量逻辑在于深度。二季度提及的那家技术基础设施客户，其初始增购规模的倍数从 5 倍，在签署提取协议后现已超过 7 倍。一家全球支付公司在五个月内达到了~8 倍，一家制药公司在六个月内超过了 6 倍。代码层（10 月 14 日公开测试，本周已向所有用户推出）已在消耗额度。目前仍无 AI 收入披露，且管理层明确表示，消耗转化为收入存在滞后。

- **MCP.** The MCP server reached ~1M WAUs, with total usage 3x q/q and write-back 4x q/q. That compares with +75% q/q write-back in 2Q, which mgmt described only qualitatively at a September conference. About half of new Pro teams used it, and MCP users grew full seats faster than non-users. 5% of all credits are now kicked off via MCP, and FIG added 20 partners, including Notion, Xcode and Meta's Muse. This is the cleanest evidence yet that coding agents are routing work back into the canvas rather than around it. MCP volume is bundled into seats, so near-term monetization is indirect (conversion, upgrades, retention). Credits consumed through agent workflows are the medium-term path.

MCP。MCP 服务器已达到 1001 万周活跃用户（WAU），总使用量环比增长 3 倍，回写量环比增长 4 倍。相比之下，第二季度的回写量环比增长为 75%，而管理层在 9 月的会议上仅对此进行了定性描述。约有一半的新 Pro 团队使用了它，且 MCP 用户的席位增长速度高于非用户。目前 5% 的积分通过 MCP 启动，FIG 新增了 20 个合作伙伴，包括 Notion、Xcode 和 Meta 的 Muse。这是迄今为止最清晰的证据，表明编码代理正在将工作路由回画布，而不是绕过它。MCP 的量已打包进席位，因此近期的变现是间接的（转化、升级、留存）。通过代理工作流消耗的积分是中期的路径。

- **Pricing.** The August repricing put ~60% (Org/Enterprise) to ~2x (Pro) more credits into each add-on at the same price. Dylan had described this at a September conference as cutting credit cost by up to half; seat allotments were unchanged. The first elasticity read is positive (add-on utilization up ~40% since repricing), but it defers incremental purchases. Drawdowns were 80% of eligible add-on purchases since the pricing update. They support larger multi-period commitments but add revenue-timing variability, a risk mgmt flagged in 2Q around “extended contracting structures.” The posture also shifted. In 2Q, mgmt framed AI investment as a “temporary cost of near-term margin”; this quarter the trade-off explicitly extended to revenue growth and NDR.

定价。8 月的重新定价以相同价格为每个附加包增加了 ~60%（机构/企业版）到 ~2 倍（专业版）的额度。Dylan 在 9 月的一次会议上将此描述为将额度成本削减多达一半；席位分配保持不变。弹性的初步反馈是积极的（自重新定价以来，附加包使用率上升了 ~40%），但这推迟了增量购买。自定价更新以来，消耗量占符合条件的附加包购买的 80%。它们支持更大的多期承诺，但增加了收入确认时间的可变性，这是管理层在二季度围绕“延长的合同结构”标记的一项风险。态度也发生了转变。在二季度，管理层将 AI 投资定位为“近期利润率的临时成本”；本季度，这种权衡明确延伸到了收入增长和 NDR。

- **Margins.** Non-GAAP GM was 82.0% (-280bps q/q, -435bps y/y) vs. Street ~81.0–81.6%, as FIG covered Agent inference ahead of GA. OM of 12.0% ($47.0M) roughly doubled Street’s ~$21–23M on the revenue beat, lower internal AI spend and broader efficiency. But OM was still -40bps y/y on +43% growth, and the FY26 OM guide (10.7%) sits below FY25’s 12.3%. Unit economics did improve:

利润率。非 GAAP 毛利率为 82.0%（环比下降 280 个基点，同比下降 435 个基点），对比 Street 预期 ~81.0–81.6%，原因是 FIG 在 GA 之前提前覆盖了 Agent 推理。营业利润率为 12.0%（4700 万美元），因营收超预期、内部 AI 支出降低以及更广泛的效率提升，约为 Street 预期 ~$21–23M 的两倍。但在 +43% 的增长下，营业利润率仍同比下降 40 个基点，且 FY26 营业利润率指引（10.7%）低于 FY25 的 12.3%。单位经济效益确实有所改善：

- The share of Agent work on FIG's own post-trained design model more than doubled since July 1.

  自 7 月 1 日以来，FIG 自有后训练设计模型上 Agent 工作的份额增加了一倍多。

- Average cost per message fell.

  每条消息的平均成本下降。

- Quality rose: the new agent beats or matches the prior one 62% of the time, user ratings are +33% and undos are -60%.

  质量提升：新 Agent 在 62% 的时间里优于或匹配之前的 Agent，用户评分 +33%，撤销操作 -60%。

Mgmt again declined to give a GM floor, anchoring to GP and OI dollars. It said 3Q's investment starts converting to GP dollars in 4Q.

管理层再次拒绝提供 GM 下限，而是锚定 GP 和 OI 金额。其表示，三季度的投资将在四季度开始转化为 GP 金额。

- **Competition.** Mgmt framed "design is the new code" and said FIG is "playing to win" as design and coding converge. Its levers are Code Layers (pushing PRs directly from the canvas), MCP and its first-party model. Dylan expects security to become a near-term focus of AI vendor evaluations. He positioned FIG's enterprise security investment as an edge over AI-native tools. There was no discussion of specific competitors, win rates or relative pricing beyond a general answer on the quality/cost/latency frontier.

  竞争。管理层提出"设计即新代码"，并表示随着设计与编码的融合，FIG 正在"为赢而战"。其杠杆在于代码层（直接从画布推送 PR）、MCP 及其第一方模型。Dylan 预计安全将成为 AI 供应商近期评估的重点。他将 FIG 在企业安全方面的投资定位为相对于 AI 原生工具的优势。除了对质量/成本/延迟前沿的一般性回答外，没有讨论具体的竞争对手、胜率或相对定价。

Bull vs. Bear Debate 多空辩论

Bulls see FIG as the system of record for digital product design, and argue its strategic value rises as AI collapses the cost of writing code. If code becomes a commodity, the bottleneck shifts to deciding what to build and how it should look and behave. That work happens on a shared, multiplayer canvas holding a company's design system, product context and decision history. Bulls argue those assets are hard to replicate. FIG holds a de facto standard position among professional designers, with network effects from multiplayer files and libraries. Its enterprise penetration is deep: gross retention is in the mid-to-high 90s and $10K+ customers are ~70% of ARR. Its persona base keeps broadening across developers, PMs and marketers. The growth algorithm has three legs. The first is seat expansion and upgrades in the enterprise, where two-thirds of $10K+ customers add full seats at renewal.

多头将 FIG 视为数字产品设计的记录系统，并认为随着 AI 降低编写代码的成本，其战略价值将随之提升。如果代码成为一种大宗商品，瓶颈将转移到决定构建什么以及它应该呈现何种外观与行为上。这项工作发生在一个共享的多玩家画布上，该画布承载着公司的设计系统、产品上下文和决策历史。多头认为这些资产难以复制。FIG 在专业设计师中占据事实标准地位，并凭借多玩家文件和库形成网络效应。其企业渗透度极深：总留存率在 90% 中高位，且 1 万美元以上客户占 ARR 的 ~70%。其用户群基础持续向开发者、产品经理和营销人员扩展。增长算法由三部分组成。 首先是企业端的席位扩展和升级，其中三分之二的 1 万美元以上客户在续费时会增加完整席位。

The second is a consumption layer on top of seats, as Agent, Make, Code Layers and Weave draw credits. The third is TAM expansion as agents and MCP pull non-designers into visual-first workflows. A model-agnostic AI stack with FIG's own post-trained design models gives it a route to better AI unit economics, rather than simply reselling frontier tokens. Its enterprise security posture also becomes a differentiator as scrutiny of AI vendors rises.

其次是席位之上的消费层，随着 Agent、Make、Code Layers 和 Weave 的使用而消耗积分。第三是 TAM（潜在市场总额）的扩展，因为 Agent 和 MCP 将非设计师带入视觉优先的工作流。一个模型无关的 AI 技术栈，结合 FIG 自己经过后训练的设计模型，使其能够获得更好的 AI 单位经济效益，而不仅仅是转售前沿模型的代币。随着对 AI 供应商审查的加强，其企业安全姿态也成为了一个差异化因素。

This quarter gave bulls their best evidence yet that AI is additive rather than disintermediating. Usage inflected at GA: 2.5x weekly credits, 65% of $10K+ customers on Agent weekly and 80%+ beta-to-GA retention. MCP write-back accelerated to 4x q/q from +75% last quarter. Half of new Pro teams arrive through MCP, and external agents now kick off 5% of credits, which suggests coding agents are pushing work into the canvas. Large customers are scaling credit commitments 6–8x within two quarters. Drawdowns (80% of eligible add-on purchases) set up larger commitments in the 4Q/1Q renewal cycle. The first-party model doubled its share of work while cutting cost per message, supporting a GM recovery toward the mid-80s once beta subsidies end. The OI beat shows mgmt can find leverage internally. Guidance has also proven conservative.

本季度为多头提供了迄今最佳的证据，表明 AI 是增量而非去中介化的。GA 阶段使用量出现拐点：每周额度达 2.5 倍，65%的 1 万美元以上客户每周使用 Agent，且 beta 到 GA 的留存率超 80%。MCP 回写环比加速至 4 倍，而上季度为+75%。半数新增 Pro 团队通过 MCP 接入，外部 Agent 现在消耗了 5%的额度，这表明编程 Agent 正在将工作推入画布。大客户在两个季度内将额度承诺扩大了 6 至 8 倍。消耗率（占符合条件附加购买的 80%）为 4Q/1Q 续约周期中更大的承诺奠定了基础。第一方模型完成的工作份额翻倍，同时降低了单条消息成本，支撑了一旦 beta 补贴结束，毛利率向 80%中段复苏。OI 超预期表明管理层能够在内部找到杠杆。 指引也被证明是保守的。

Bears argue FIG is a seat-based application whose core buyer, the professional designer, is among the job functions most exposed to AI automation. They see the market converging from both directions. Coding agents and AI app builders (e.g., Lovable, v0, Bolt) let PMs and engineers go from prompt to working UI without a design canvas. Model labs are shipping their own design surfaces (e.g., Claude Design). Over time, that compresses seat growth and pricing power. The AI layer is structurally lower-margin than the legacy seat business: non-GAAP GM has fallen from ~92% in 1Q25 to 82%. FIG is subsidizing usage to defend relevance. Add-ons now carry 60–100% more credits for the same price, beta inference was absorbed in 3Q, and mgmt is still deciding how much model savings to pass through. Consumption pricing also lowers visibility just as the seat engine slows: drawdowns shift recognition timing, and pay-as-you-go is excluded from NDR.

看空者认为 FIG 是一款基于席位的应用，其核心买家——专业设计师——属于最易受 AI 自动化冲击的岗位职能。他们认为市场正从两个方向形成夹击。编码智能体和 AI 应用构建器（如 Lovable、v0、Bolt）让产品经理和工程师无需设计画布，就能从提示词直接生成可用的 UI。模型实验室也在推出自己的设计界面（如 Claude Design）。久而久之，这将压缩席位增长和定价权。AI 层的利润率在结构上低于传统的席位业务：非 GAAP 毛利率已从 25 年第一季度的 ~92% 降至 82%。FIG 正在通过补贴使用量来捍卫自身相关性。附加组件现在以相同价格提供了 60–100% 更多的额度，Beta 推理已在第三季度被内部吸收，而管理层仍在决定将多少模型成本节约让利给客户。 消费定价也降低了可见性，正如席位增长引擎放缓一样：缩减使得确认时间发生偏移，且按需付费模式被排除在 NDR 之外。

Financially, the stock is less cheap than EV/sales suggests: SBC runs ~40% of revenue, and GAAP OM is -30%, Cash used for RSU tax withholding ($211M YTD) exceeded YTD FCF ($183M). 2Q brought CTO, CPO and CMO transitions.

财财务上，该股票并不像 EV/销售额所显示的那么便宜：SBC 占收入的 ~40%，GAAP OM 为 -30%，用于 RSU 预扣税的现金（年初至今 2.11 亿美元）超过了年初至今的 FCF（1.83 亿美元）。第二季度迎来了 CTO、CPO 和 CMO 的更迭。

This quarter gave bears plenty of evidence. Growth decelerated for the first time in four quarters and the beat narrowed. The 4Q guide implies ~$12M of q/q growth, well below the $21–37M added in each of the last four quarters, and a ~33% exit. Every forward indicator softened: NDR fell to 131% from 139% in 1Q, billings grew +24% vs. Street ~+32%, RPO fell q/q and cohort net adds hit six-quarter lows. GP grew slower than revenue (+36% vs. +43%), and OM fell 40bps y/y on +43% growth. Implied 4Q OM is ~6%, and the FY26 OM guide sits below FY25. Mgmt also moved the goalposts in a bearish direction. It is now explicitly willing to trade near-term growth and NDR for adoption, refused a GM floor again, declined to frame FY27 and signaled smaller beats.

本季度为看空者提供了充足的证据。增长四个季度以来首次减速，且超预期幅度收窄。四季度业绩指引暗示环比增长~$12M，远低于过去四个季度每个季度增加的$21–37M，以及~33%的年末增速。所有前瞻性指标均走软：NDR 从一季度的 139%降至 131%，账单收入增长+24%而华尔街预期为~+32%，RPO 环比下降，同期群净增量触及六个季度低点。毛利增速慢于营收（+36% vs. +43%），且在营收+43%增长的情况下，营业利润率同比下滑 40 个基点。隐含的四季度营业利润率为~6%，且 26 财年营业利润率指引低于 25 财年。管理层也将标准向看空方向转移。如今明确愿意以短期增长和 NDR 换取普及率，再次拒绝设定毛利率下限，拒绝勾勒 27 财年前景，并暗示超预期幅度将变小。
