State of the Themes 主题现状

The End of the Trade (as we know it)

交易的终结（正如我们所知的那样）

CITRINI
4 HOURS AGO • PAID

The changing fall leaves in New York remind us of a fundamental truth. There is a season to everything, especially in markets.

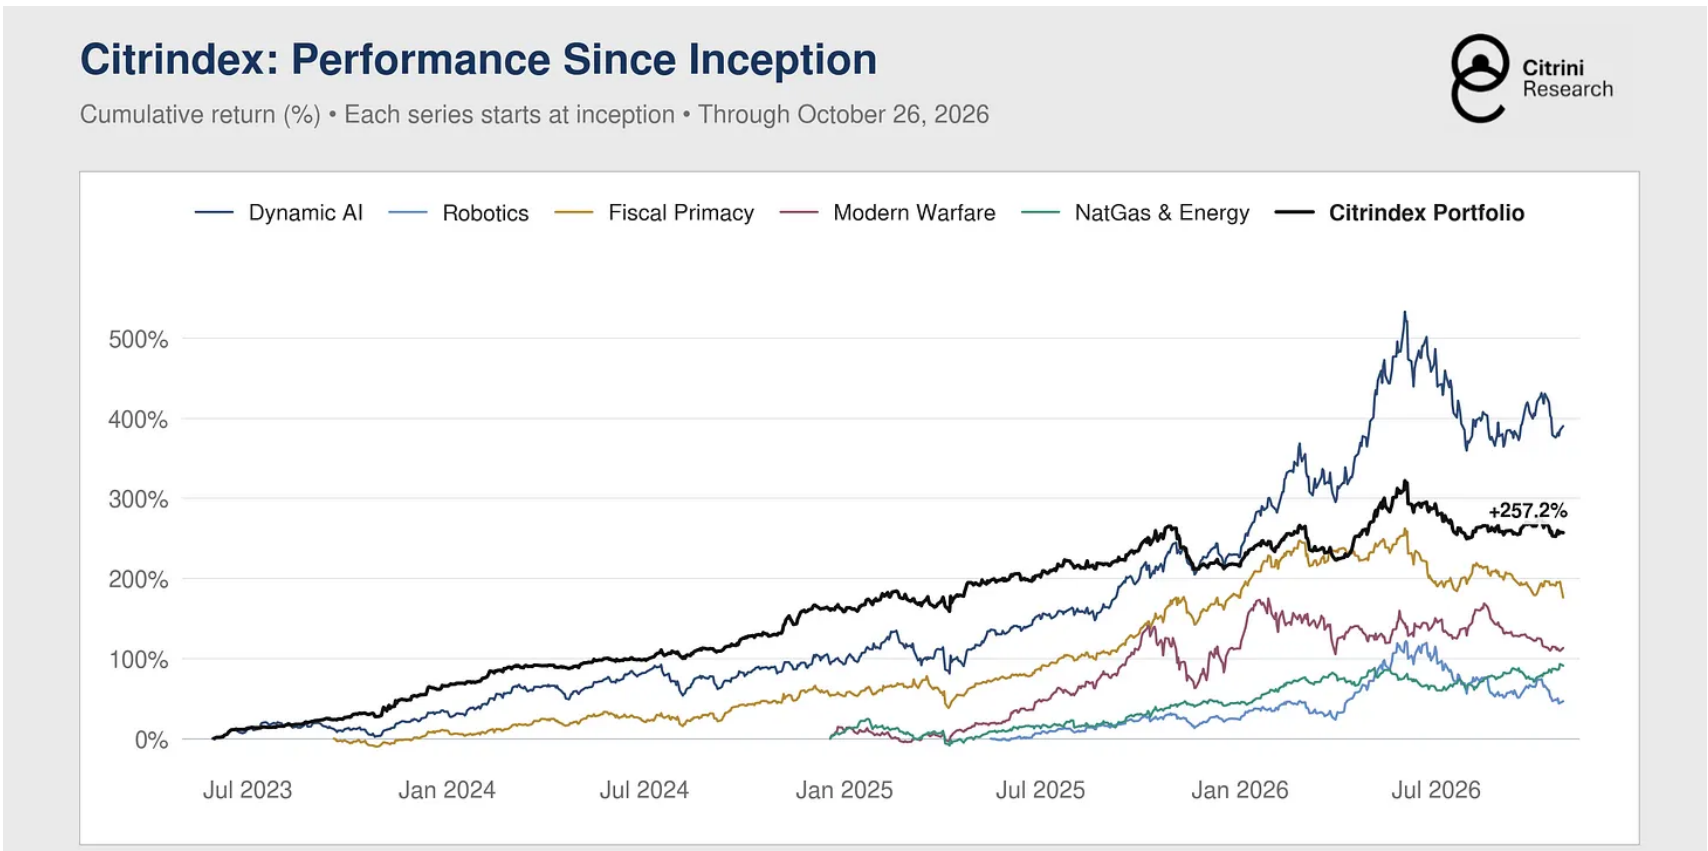

纽约变幻的秋叶提醒我们一个基本真理。万物皆有时，尤其是在市场中。

When Citrini Research began back in 2023, it was a good time for *Thematic Investing™*. Stocks were cheap, sentiment was bleak, and a technological revolution was just beginning to break out.

当 Citrini Research 于 2023 年起步时，正是主题投资（Thematic Investing™）的好时机。股票便宜，情绪低迷，一场技术革命才刚刚开始爆发。

It wasn't all that difficult to cast a wide net, identify structural tailwinds, and let a rising tide lift the boats. We started in AI, and repeated the blueprint with fiscal primacy, GLP-1s, robotics, energy, defense, healthcare...

撒大网、识别结构性顺风，并让水涨船高，并不是那么困难。我们从人工智能（AI）起步，随后在财政主导、GLP-1、机器人、能源、国防、医疗保健等领域复制了这一蓝图……

...and it's worked pretty well. Since inception on 5/31/23, the *Citrindex* total return has beaten the SPX by over 2.5x.

……而且效果相当不错。自 2023 年 5 月 31 日成立以来，Citrindex 的总回报率已超过 SPX 2.5 倍以上。

But sometime over the past 12 months, our job writing "thematic" equity research has gotten harder. As the market prices in greater upside, the thematic narratives shift further out on the risk curve from "obvious, cheap companies that have already proven they are winners" to "speculative and unprofitable companies that rely on a 2 TAM". Stocks are no longer cheap, nor is sentiment bleak.

但在过去 12 个月里，我们撰写**主题型股票研究**的工作变得愈发困难。随着市场逐步计入更高的上行预期，主题投资叙事沿着风险曲线持续向外迁移：从“已经证明自身成功、确定性高且估值低廉的公司”，转向“尚处投机阶段、尚未盈利、成长高度依赖潜在总市场空间（TAM）的公司”。个股估值不再便宜，市场情绪也不再低迷。，

While the market has become more discriminating, there are always trends that are undervalued. Catching the Life Sciences inflection over the summer was a great example. But some others have felt stretched and forced. The "pound the table conviction" started to become more of a narrative hamster wheel. The shift isn't in our imagination (or lack thereof).

虽然市场变得更具甄别力，但总有一些趋势是被低估的。在夏季捕捉到生命科学的拐点就是一个极好的例子。但其他一些趋势却让人觉得牵强且生硬。“拍桌子的坚定信念”开始变得更像是一个叙事的仓鼠轮。这种转变并非出于我们的想象（或缺乏想象）。

Today is our 10th “State of the Themes” – and we are using this opportunity to completely redo the Citrindex and align it for the market’s next phase.

今天是我们的第 10 期“主题状态”——我们借此机会彻底重构 Citrindex，使其与市场的下一阶段保持一致。

We’ve overhauled the entire portfolio from the bottom up. Rather than hold onto a book of continuation trades, we are focused on ***reversals, pairs, and entirely fresh ideas***. We are keeping most of our core themes but dramatically shifting how we’re expressing them. We are also adding several new categories in sectors we think the market continues to overlook. The new approach, we hope, is well suited for the market ahead.

我们自下而上地彻底重组了整个投资组合。我们不再持有延续性交易组合，而是专注于反转、配对交易以及全新的思路。我们保留了大部分核心主题，但在表达方式上进行了重大转变。我们还在市场持续忽视的板块中增加了几个新类别。我们希望，这种新方法非常适合未来的市场。

Table of Contents 目录

- **The End of the Trade (as we know it)**

  交易的终结（正如我们所知的那样）

- **State of the Themes** 主题现状
  - **Artificial Intelligence:** *Relative Value*

    人工智能：相对价值

  - **Life Sciences and Healthcare:** *Trimming Fat, Adding Muscle*

    生命科学与医疗保健：减脂增肌

  - **Fiscal Primacy:** *Catch the Pendulum*

    财政主导：抓住钟摆

- **NatGas & Energy:** *Three Key Convictions*

  天然气与能源：三大核心信念

- **Robotics:** *Shiny New Objects*

  机器人：耀眼的新事物

- **Modern Warfare:** *Getting Defensive*

  现代战争：走向防御

- ***(NEW) Boomer Software:*** *SaaS Survivors*

  (新增) 婴儿潮软件：SaaS 幸存者

- ***(NEW) Booze & Bubbles:*** *Bottoms Up*

  (NEW) 酒水与气泡：干杯

- ***(NEW) Financials:*** *Paid to Wait*

  (NEW) 财务：值得等待

- ***(NEW) Entertainment:*** *The Scarcity Premium*

  (NEW) 娱乐：稀缺性溢价

- **The Girlfriend Index:** *Where Brand Heat is Building*

  女友指数：品牌热度正在何处升温

- **Stocking Stuffers:** *Something for the Holidays*

  节日礼物：为假期准备的惊喜

- **The Citrindex, Reloaded** **Citrindex，重装上阵**

The End of the Trade (as we know it)

交易的终结（正如我们所知的那样）

May 31, 2023 was about as good a time as any to start writing thematic research and creating a model portfolio to track it. *This was more than "lucky timing".* It was recognition of where we were in the market cycle and a deliberate decision

on what strategy would suit it.

2023 年 5 月 31 日，是开始撰写主题研究并创建模型组合进行跟踪的绝佳时机。这不仅仅是“幸运的时机”。这是对我们在市场周期中所处位置的认知，也是对何种策略适合该周期的深思熟虑的决定。

It's no coincidence that AI: Global Equity Beneficiaries was published days after NVDA's first blowout earnings quarter. ChatGPT had been released in late 2022 and the market was starting to believe that this fun little chatbot could do more than write poems and send emails – maybe it could pull tech out of its 18-month slump.

《AI：全球股票受益者》在英伟达（NVDA）发布首个爆表财报季的几天后出版，这并非巧合。ChatGPT 于 2022 年底发布，市场开始相信这个有趣的小聊天机器人不仅能写诗和发邮件——也许它还能让科技行业走出长达 18 个月的低迷。

The belief was forming, but NVDA's numbers provided unequivocal proof. *At a very minimum*, the **investment** was going to be huge, and companies like NVDA *(which had taken a 68% drawdown)* were about to start selling a lot of chips.

这种信念正在形成，但英伟达的业绩提供了确凿的证据。至少，投资规模将会非常巨大，而像英伟达（其股价已回撤 68%）这样的公司即将开始大量销售芯片。

We now know the broad market had already bottomed back in October 2022, but it was not obvious at the time. The extreme labor crunch was quickly fading, the Fed was

hiking rates, and the banking sector had just had its biggest scare since 2008.

我们现在知道，大盘早在 2022 年 10 月就已触底，但当时这一点并不明显。极端的劳动力紧缩正在迅速消退，美联储正在加息，而银行业刚刚经历了自 2008 年以来最大的惊吓。

But not all was bad…mega cap tech was already clawing its way out of the hole from depressed valuations and a return to earnings growth *(remember the Metaverse?)*. Inflation was quickly falling and the Fed's front-end hikes had become performative – its own forward guidance began to show it was mentally "done" hiking back in late 2022. Macro charts showed COVID whiplash, not cyclical weakness.

但也并非全是坏事……大型科技股正从估值低迷和盈利增长回归的泥潭中艰难爬升（还记得元宇宙吗？）。通胀迅速回落，美联储的前端加息已流于形式——其前瞻性指引开始显示，早在 2022 年末，它在心理上就已经"结束"加息了。宏观图表显示的是新冠疫情的剧烈波动，而非周期性疲软。

Rate cuts, AI, and a Fed backstop walk into a bar…

降息、人工智能和美联储的兜底走进了一家酒吧……

The early days were defined by strong companies at good valuations in a market that was still severely underestimating the investment coming down the pike.

早期阶段的特点是，在仍严重低估即将到来的投资的市场中，优质公司拥有良好的估值。

Trump's election promised a wave of deregulation, tax cuts and a "highly permissive" regulatory environment with strong self-interest. Tariff threats were a bear-trap and DOGE was a dog. Fiscal spending simply shifted – from non-profit/NGO/environmental and consultants towards defense and security. Animal spirits can't be caged forever… POTUS launching a memecoin might have been a clue. By late 2025 we reached exit velocity.

特朗普的当选预示着一波去监管、减税以及带有强烈利己色彩的"高度宽松"监管环境。关税威胁是个熊夹，DOGE 不过是只小狗。财政支出只是发生了转移——从非营利组织/非政府组织/环保领域和顾问转向了国防与安全。动物精神不可能被永远关在笼子里……总统发行模因币可能就是一个线索。到 2025 年底，我们达到了逃逸速度。

Source: Citrini Research

By April, the Iranian drawdown combined with the absolute explosion in agentic/coding compute demand and lab ARR led to a three-month euphoric blowoff by our own (subjective) thermometer and more statistical metrics like Morgan Stanley's TMT Momentum Factor index. Then, buyers ran out.

到了 4 月，伊朗资金的撤出，加上代理/编码计算需求与实验室 ARR 的绝对爆发，根据我们自身（主观的）温度计以及摩根士丹利 TMT 动量因子指数等更统计学的指标，引发了一场长达三个月的狂热冲顶。然后，买家耗尽了。

When Artificial Weakness...

当人工弱点……

AI is not the market, but it's the only place to start. This year we've finally seen the capital **B** billions of explosive growth in AI revenues. But these headline numbers have evolved from underpriced upside to the table stakes required to justify the trillions of dollars being spent today. Given the enormous chasm between revenues and capex, the asymmetric risk is no longer to the upside, but to the downside.

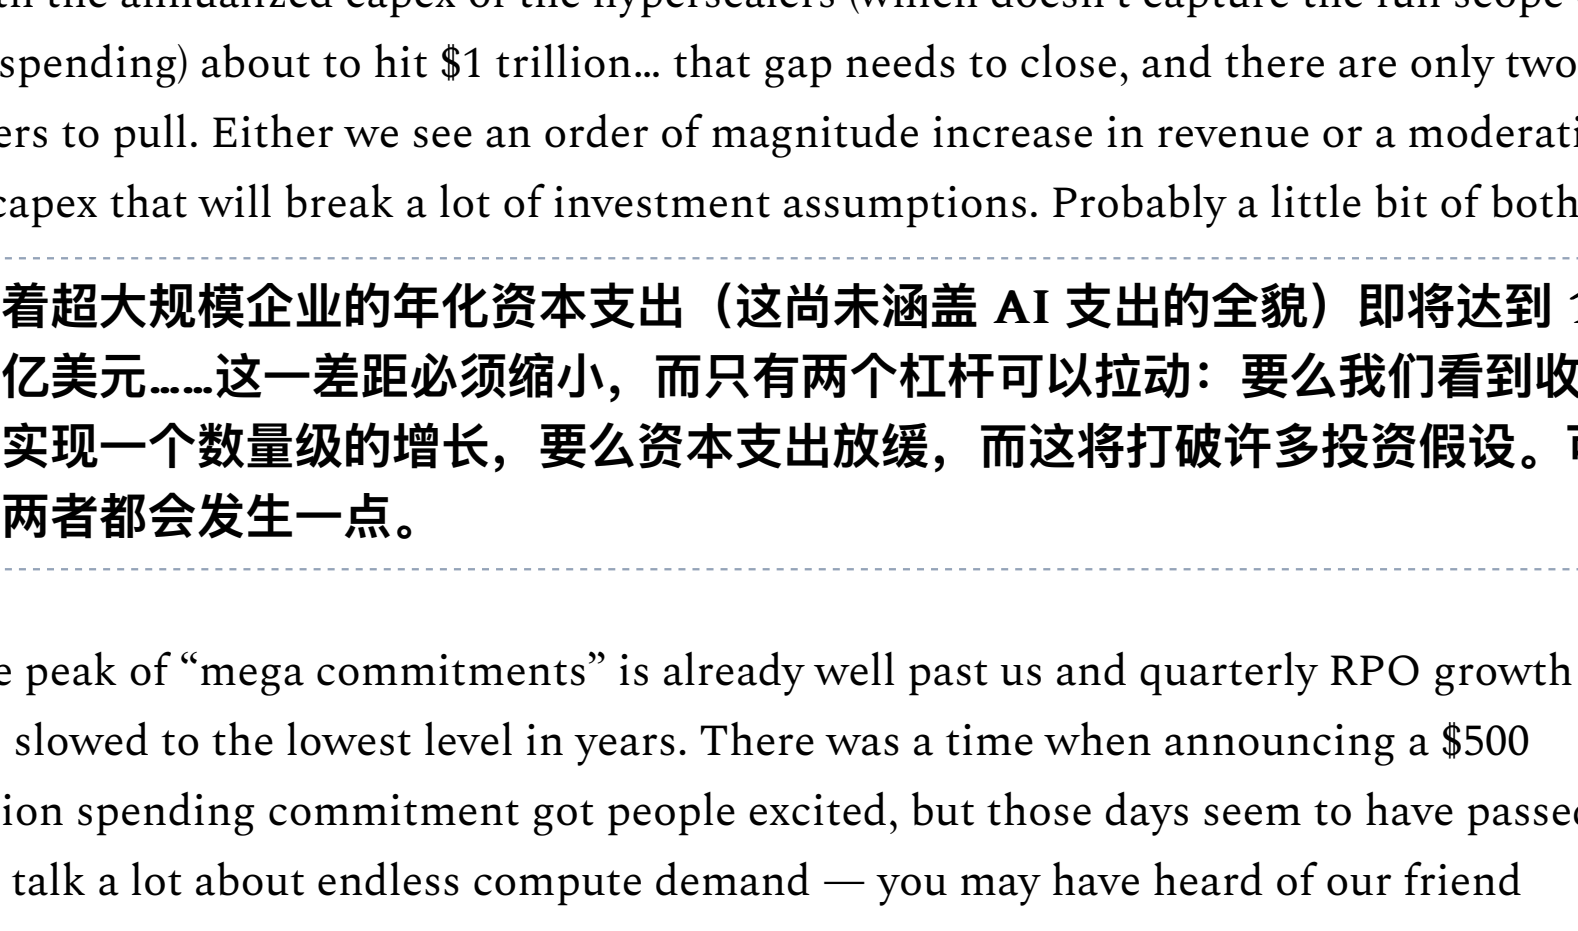

AI 不是市场本身，但它是唯一的起点。今年我们终于看到了 AI 收入爆炸式增长达到大写 B 的十亿级别。但这些 headline 数字已经从被低估的上行空间，演变成了证明当前数万亿美元支出合理性的基本门槛。鉴于收入与资本支出之间存在巨大鸿沟，不对称风险已不再在于上行，而在于下行。

With the annualized capex of the hyperscalers (which doesn't capture the full scope of AI spending) about to hit $1 trillion… that gap needs to close, and there are only two levers to pull. Either we see an order of magnitude increase in revenue or a moderation in capex that will break a lot of investment assumptions. Probably a little bit of both.

随着超大规模企业的年化资本支出（这尚未涵盖 AI 支出的全貌）即将达到 1 万亿美元……这一差距必须缩小，而只有两个杠杆可以拉动：要么我们看到收入实现一个数量级的增长，要么资本支出放缓，而这将打破许多投资假设。可能两者都会发生一点。

The peak of "mega commitments" is already well past us and quarterly RPO growth has slowed to the lowest level in years. There was a time when announcing a $500 billion spending commitment got people excited, but those days seem to have passed. We talk a lot about endless compute demand — you may have heard of our friend Jevons — but who has more visibility than the leading labs that have slowed their commitments?

"巨额承诺"的巅峰早已过去，季度 RPO 增速已放缓至多年来的最低水平。曾经，宣布 5000 亿美元的支出承诺会让人兴奋不已，但那样的日子似乎已经一去不复返了。我们经常谈论无尽的算力需求——你可能听说过我们的朋友杰文斯——但还有谁比那些已经放缓承诺的领先实验室更有洞察力呢?

In order for the capex math to work, revenue must grow faster than what's already been a breakneck pace. Ecosystem ARR is looking to be at least $200 billion, an eye-popping number few were predicting back in 2023.

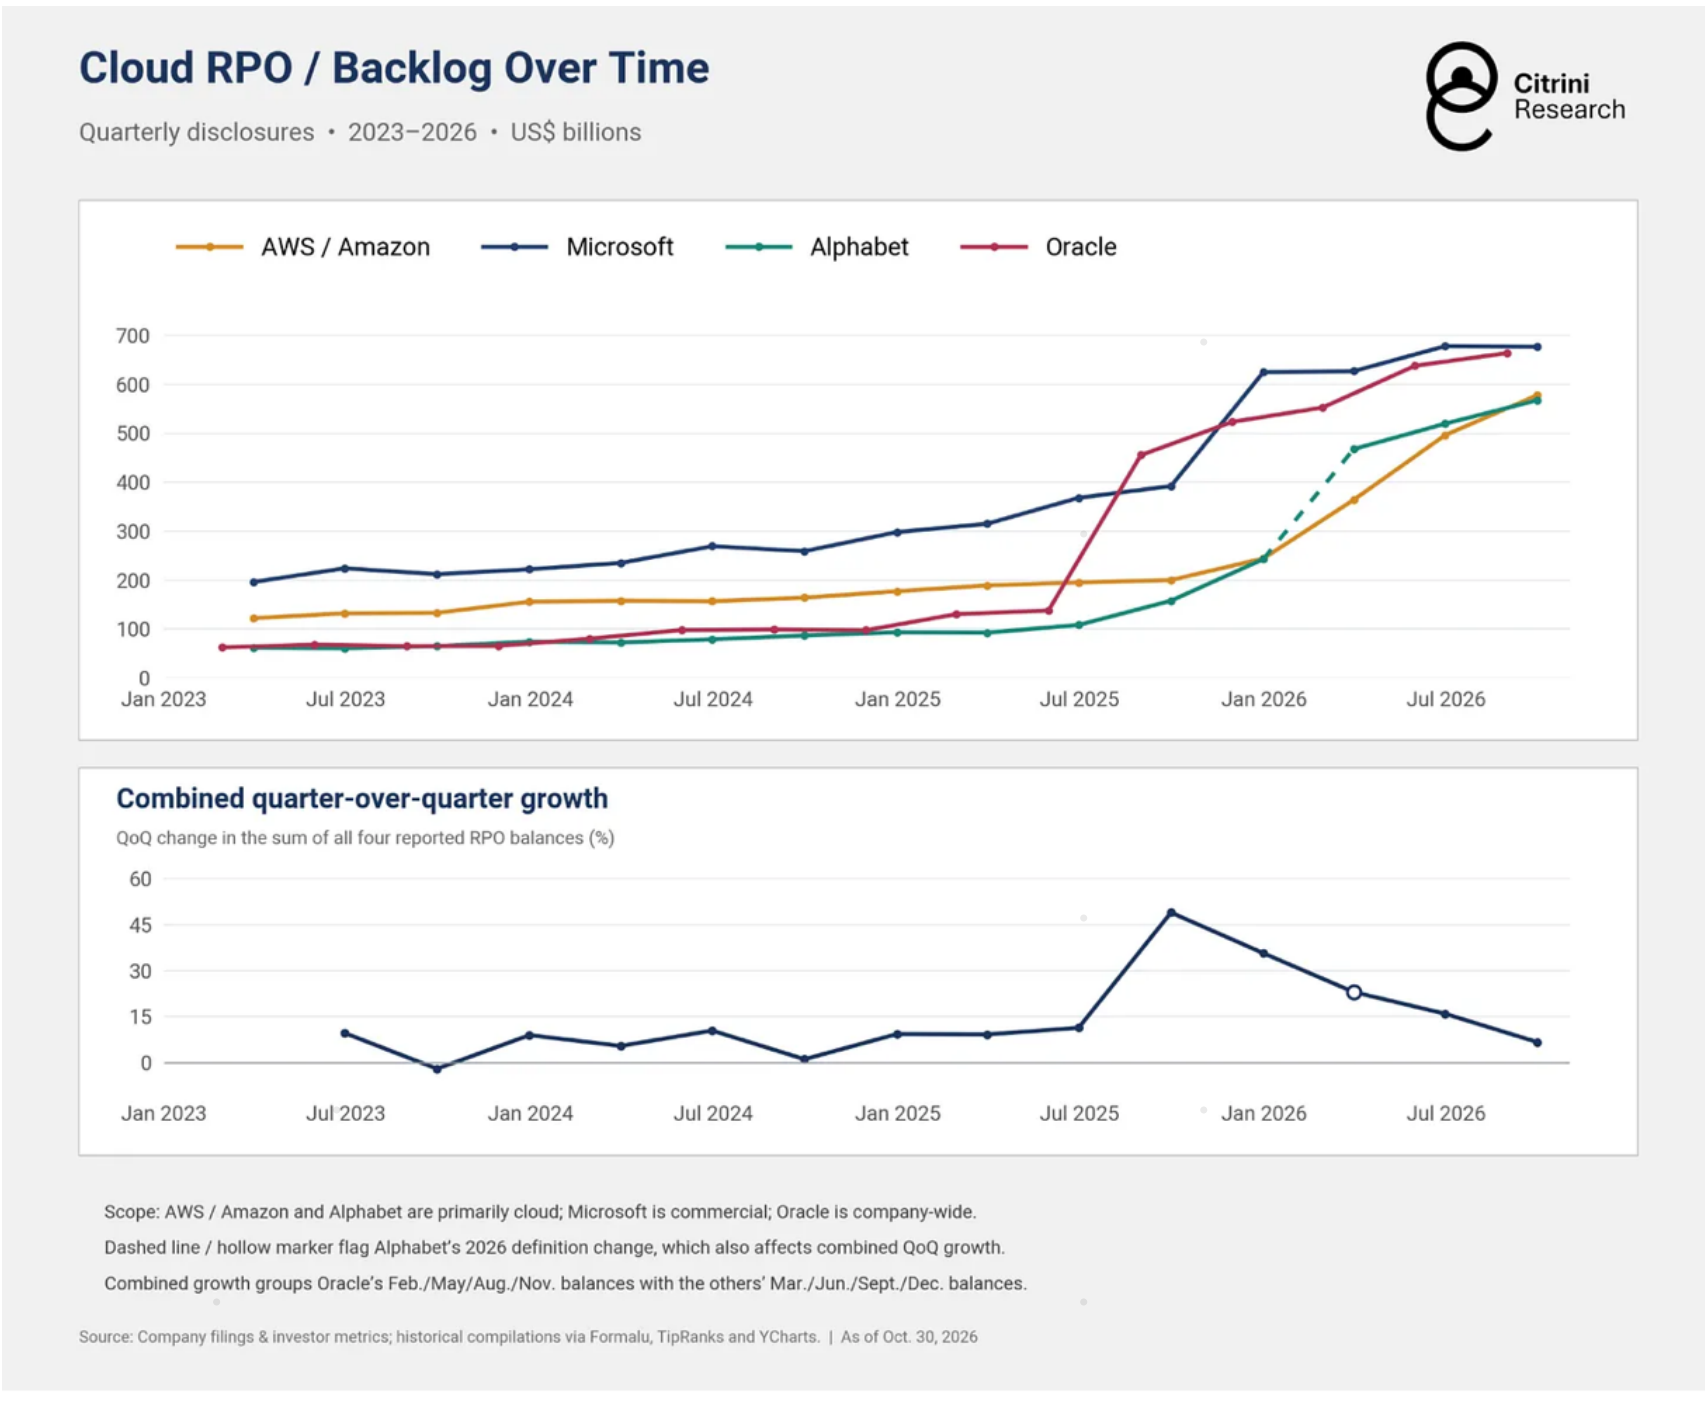

为了让资本支出的数学逻辑成立，收入的增长速度必须超过目前已经堪称极快的步伐。生态系统 ARR 预计至少将达到 2000 亿美元，这是一个在 2023 年很少有人能预测到的惊人数字。

But it's not enough. Doubling capex here would require revenue that has a starting unit of "trillion", and we don't think that will happen.

但这还不够。在此基础上将资本支出翻倍，需要以"万亿"为起始单位的收入，而我们认为这不会发生。

Said differently, it's **peak capex growth**.

换句话说，这是资本开支增长的顶峰。

The revenue-capex canyon is not a new argument, and some earlier takes argue using numbers that are now insignificant relative to current scale — remember Sequoia's $200 billion question in September 2023, or its $600 billion question in June 2024? Quaint.

营收与资本开支之间的鸿沟并非新论点，一些早期的观点引用的数字与当前规模相比已微不足道——还记得红杉在 2023 年 9 月提出的 2000 亿美元问题，或其在 2024 年 6 月提出的 6000 亿美元问题吗？那都已是过眼云烟。

It's not hard to see potential for overhype and overbuild – we'd wager that most in the market ***expect*** that cycle to play out at some point in time.

不难看出过度炒作和过度建设的潜力——我们敢打赌，市场中的大多数人预期这一周期会在某个时间点上演。

But the AI bear case hasn't had any teeth — as long as there is still belief, momentum, and most importantly **money,** the trade is viable. Hyperscalers – with a combined market cap of well over $10 trillion – can no longer tap their cash flow to fund these projects and have been shoving debt and equity issuance into a market of "willing buyers at the current fair market price".

但 AI 的看空逻辑一直缺乏实质杀伤力——只要仍有信念、动能，以及最重要的资金，这种交易就依然可行。超大规模计算企业——合计市值远超 10 万亿美元——已无法再依靠自身现金流来为这些项目提供资金，只能不断将债务和股权发行塞给一个"以当前公允市场价格愿意接盘的买家"的市场。

Each stock and bond sale chips away at total liquidity in capital markets, and each round of dilution deadens the prior enthusiasm of slinging tokens at an 80%+ margin.

每一次股票和债券的发行都在蚕食资本市场的总流动性，而每一轮稀释都在削弱此前以 80% 以上利润率抛售代币时的狂热。

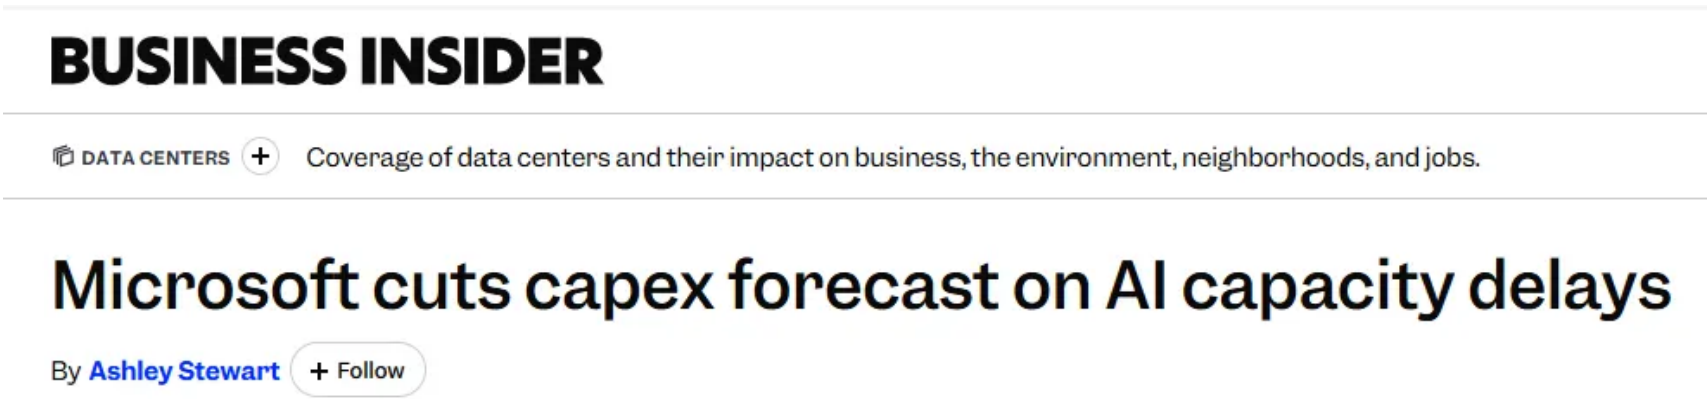

There is a supply and demand curve for everything, even capital, and it's clear that demand for the issuances is starting to wane as well.

万物皆有供需曲线，资本也不例外，很明显，对这些发行物的需求也开始衰退了。

Outside of capital, problems are now surfacing surrounding the execution of datacenter construction, where the *Bottlenecks™* – power, plugs, and policy – have evolved from a momentum trade to real-world risks. Securing interconnects, labor and supplies is holding back construction and could create a slowdown in spending on their own. If the delays stack up enough, with turbine backorders not being fulfilled and input costs cranking, investors start looking at the extended completion dates up against the existing debt maturity dates and you start hearing

phrases like “takeout risk” and “completion defaults.”

除了资本之外，数据中心建设执行方面的问题也开始浮现，其中“瓶颈™”——电力、接口和政策——已从一种动量交易演变为现实世界的风险。确保互连、劳动力和供应正在阻碍建设，并可能导致支出放缓。如果延误不断累积，涡轮机积压订单无法完成，且投入成本攀升，投资者开始将延后的完工日期与现有的债务到期日期进行对比，于是你开始听到诸如“退出风险”和“完工违约”之类的说法。

Perhaps the bottlenecks become the excuse some people need to quietly trim their own projections without causing a rush for the exits.

也许这些瓶颈会成为某些人需要的借口，让他们得以在不引发恐慌性抛售的情况下，悄悄下调自己的预测。

And policy is no longer ambiguous. The gubernatorial elections in Texas, Ohio, and Georgia – three of the largest data center locales in the country – were effectively a referendum on the buildout. None of the incoming governors are likely to put an outright stop to the buildout, but *the cost is almost certainly going to get a lot higher*: larger municipal concessions, clean energy requirements, ratepayer protections, and slower permitting.

政策也不再模棱两可。德克萨斯州、俄亥俄州和佐治亚州——这三个全国最大的数据中心所在地——的州长选举实际上是对建设的一次全民公投。新任州长都不太可能完全叫停建设，但成本几乎肯定会大幅上升：更大的市政让步、清洁能源要求、费率用户保护，以及更慢的审批流程。

Texas offered a sneak preview before the votes were even counted. Last week, banks got hung on $15 billion in funded bridge loans to an Anthropic-backed datacenter project that was halted by the Texas DC moratorium (which alone is one of the most potentially disruptive wildcards to the AI capex trade).

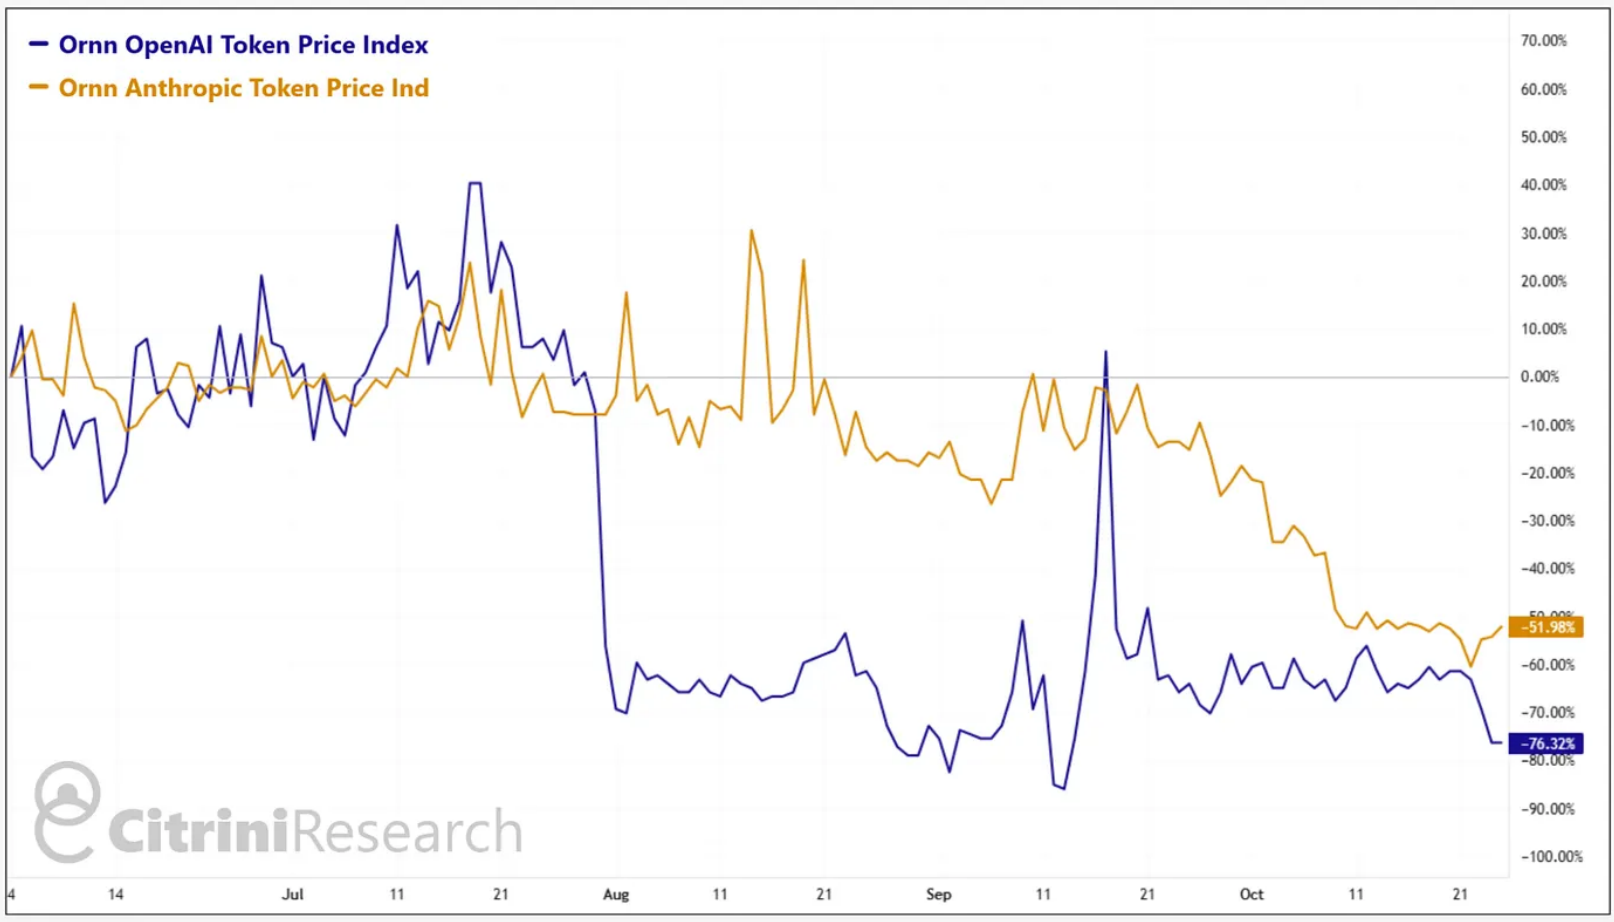

在选票清点之前，德克萨斯州就提前预示了这一点。上周，银行被一笔 150 亿美元的过桥贷款套牢，这笔贷款提供给一个由 Anthropic 支持的数据中心项目，该项目因德克萨斯州的数据中心暂停令而停滞（仅此一项就是 AI 资本支出交易中最具潜在破坏性的变数之一）。

The credit markets that ***aren't*** backstopped by hyperscalers have ground to a total halt. Nothing will make a bank pucker faster than getting stuck with risk it can't move. Neoclouds, high yield private credit, and BDCs? **Good luck.**

那些没有超级云厂商兜底的信贷市场已经彻底停滞。没有什么比持有无法转移的风险更能让银行紧张退缩的了。新云、高收益私募信贷以及 BDC？祝你好运。

And as for the labs? We noted to readers that Anthropic's S-1 published last week was a lot cleaner than some expected. To its credit, the company has done a good job letting others hold much of the capital-intensive buildout risk while sitting on a massive cash pile, and breaking cash-flow positive far ahead of most expectations. But for those of us with a memory longer than a goldfish, we have seen disruptive token pricing rapidly collapse an advantage.

至于那些实验室呢？我们曾向读者指出，Anthropic 上周发布的 S-1 比某些人预期的要干净得多。值得称赞的是，该公司在坐拥巨额现金储备的同时，很好地让其他方承担了大部分资本密集型建设风险，并且远超大多数预期地提前实现了正现金流。但对于我们这些记忆力比金鱼还长的人来说，我们曾见过颠覆性的 token 定价是如何迅速瓦解优势的。

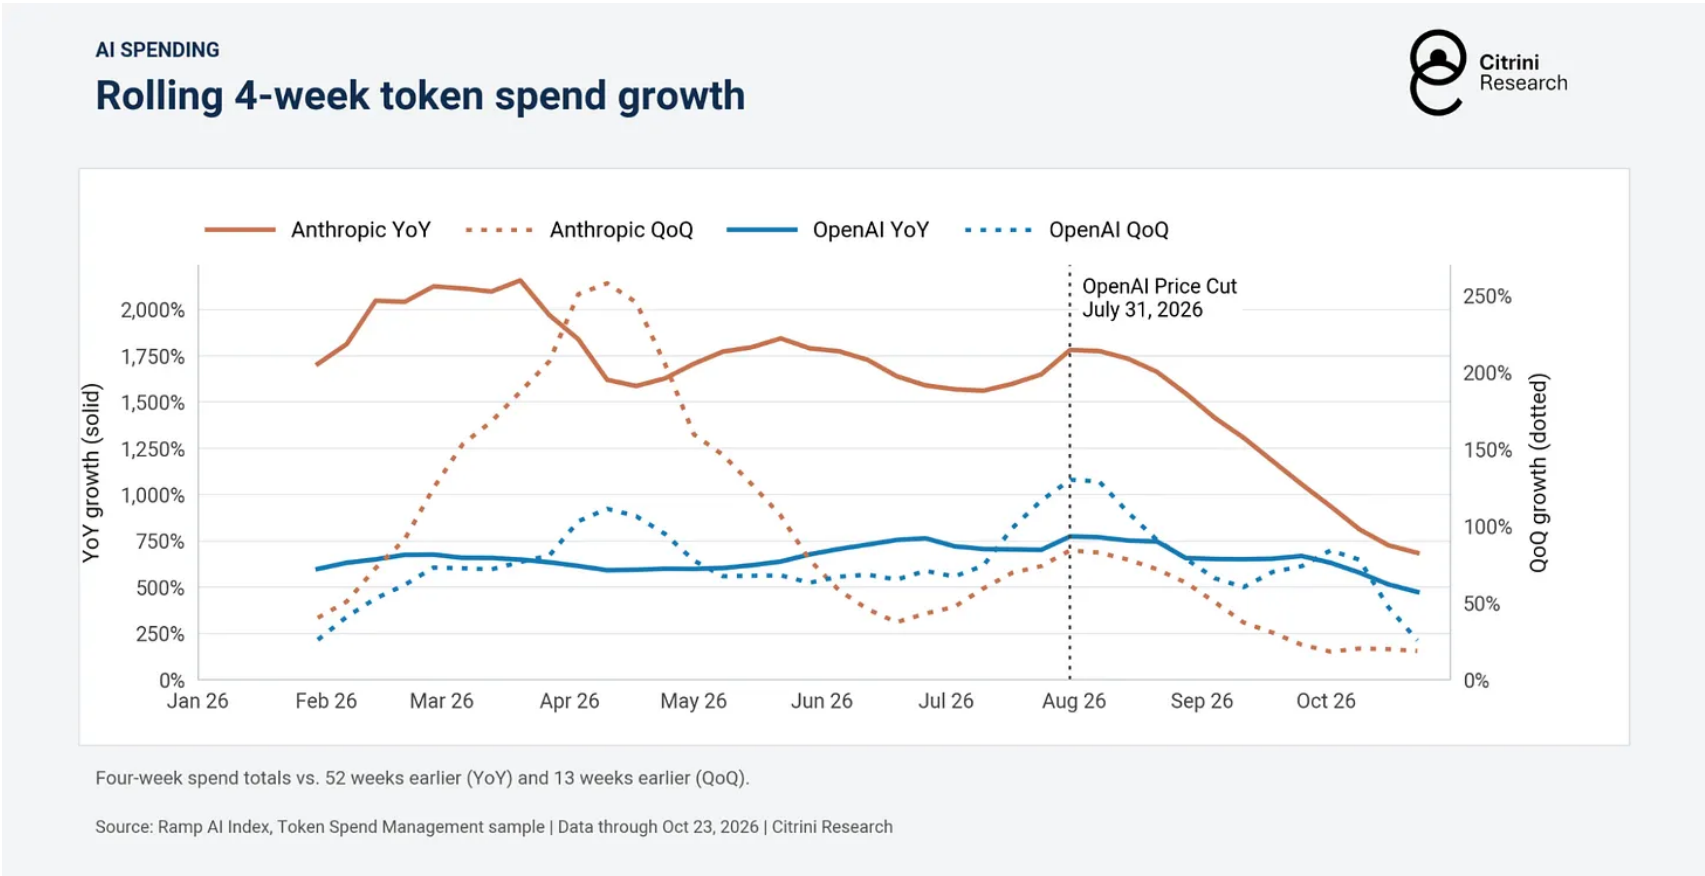

Source: Citrini Research

On July 30, OpenAI slashed token prices to claw back market share from the other labs. It worked for OAI, but the move was a clear sign of commoditization, and price wars marked the beginning of the end of the great railroad cycle.

7 月 30 日，OpenAI 大幅下调 token 价格，试图从其他实验室手中夺回市场份额。这对 OAI 奏效了，但此举显然是商品化的信号，而价格战标志着大铁路周期走向终结的开端。

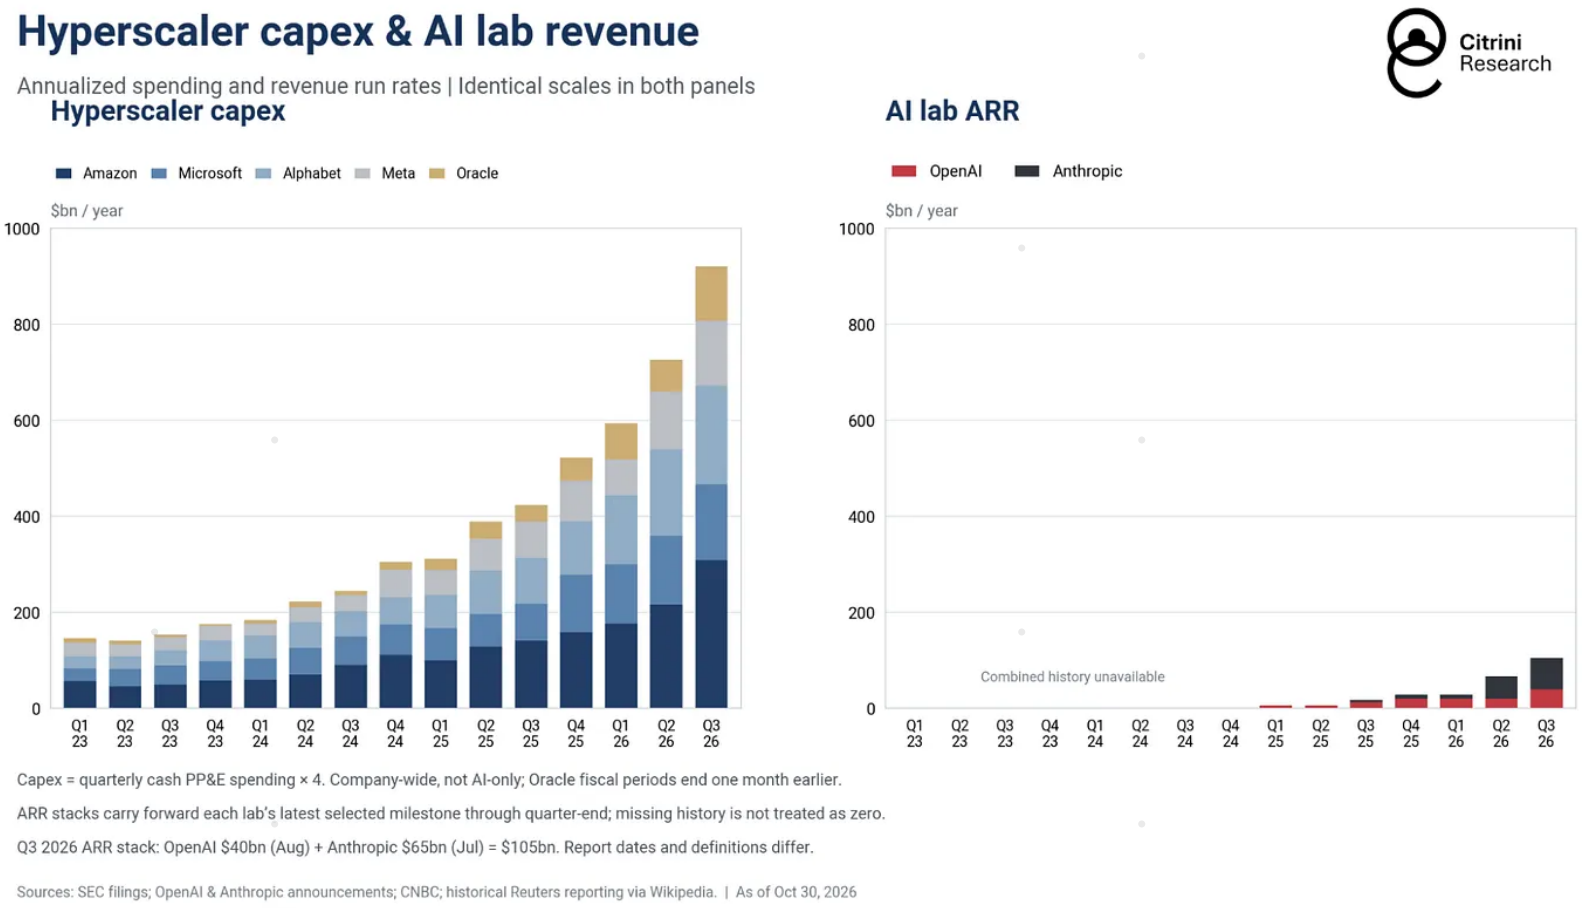

Ant's explosive growth hit a wall as its share immediately flowed to OpenAI. **Many customers, it appears, were indeed *price elastic* in an industry with remarkably similar products and near frictionless, instantaneous, *often automated* switching.**

蚂蚁的爆发式增长遭遇了阻碍，其份额立即流向了 OpenAI。许多客户似乎确实具有价格弹性，尤其是在一个产品极其相似、切换几乎无摩擦、即时且往往自动化的行业中。

We aren't here to dump on the labs. It seems like token pricing has stabilized for the moment, Anthropic is doing well with Opus 5.5 and we think both labs likely have a lot of long-term value. But like all revolutions, what is needed to sustain capex growth rates is likely *not possible* in this reality.

我们并非为了抨击这些实验室。目前 token 价格似乎已趋于稳定，Anthropic 凭借 Opus 5.5 表现良好，我们认为这两家实验室很可能拥有巨大的长期价值。但正如所有革命一样，维持资本支出增长率的所需条件，在当前现实中恐怕难以实现。

When quite literally trillions of investment and wealth are hanging on the assumption

that two companies are going to 10x revenue in the next several years, the bar of scrutiny is appropriately raised.

当数万亿的投资和财富实实在在地押注于两家公司未来几年收入将增长 10 倍的假设时，审查的标准理应相应提高。

Finally, if NVDA's 2023 earnings were a confirmation of an upward inflection already in process, perhaps we are now seeing the evil twin to the downside – **destructive disruption** in things like SaaS and Search that is now finally showing up in the numbers. Of course our 2028 Global Intelligence Crisis was merely a thought piece but at least parts of it are...a little on the nose.

最后，如果英伟达（NVDA）2023 年的盈利确认了已在进行中的向上拐点，那么或许我们现在看到的是其向下反转的邪恶双胞胎——SaaS 和搜索等领域正在发生的破坏性颠覆，如今终于体现在了数据上。当然，我们的《2028 年全球智能危机》仅仅是一篇思想实验文章，但至少其中的部分内容……有点一语成谶了。

It wasn't until ServiceNow's Q3 26 report that the mechanism of reflexivity became clearer.

> *SERVICENOW NET NEW ACV GROWTH DECELERATES TO 14% FROM 23%; ANNOUNCES 15% WORKFORCE REDUCTION AND 'STRUCTURAL EFFICIENCY PROGRAM'; SHARES FALL 18% | Bloomberg, October 2026*

Citrini Research | Bloomberg

Is this time different? We've had DeepSeek, Tariffs, Iran... is this just a correction?

这次会有所不同吗？我们经历了 DeepSeek、关税、伊朗……这仅仅是一次回调吗？

It's a question of expectations. What's the base, what's priced, and who's willing to fund it?

这是一个关于预期的问题。基础是什么，已计入定价的是什么，以及谁愿意为其提供资金？

- *Are lab ARR growth rates higher or lower next year than the past year?*

实验室 ARR 增长率明年是高于还是低于过去一年?

- *Are 2027/28 datacenter delivery schedules likely to accelerate or be delayed?*

2027/28 年数据中心交付进度可能加快还是延迟?

- *Are financial markets more or less likely to lend to the theme?*

金融市场向该主题提供贷款的可能性是更大还是更小?

Now, to be clear, we have no doubt that token usage, token spend, and AI adoption will all continue to grow (with both productive and disruptive downstream effects). What we are less convinced about is the ***ability to invest in companies that so far have captured the bulk of value in this investment – or the Trade (as we know it).***

现在，需要明确的是，我们毫不怀疑 token 用量、token 支出以及 AI 的采用率都将继续增长（并带来兼具建设性与破坏性的下游效应）。我们不太确信的是，是否有能力投资于那些迄今为止已攫取该投资中绝大部分价值的公司——或者说“贸易”（正如我们目前所知）。

We're going to introduce some nuance here because any time you take a position that is slightly different from the one you just had, the assumption is that it is a hard flip and we are going from 100% bullish to 100% bearish. That is not our intent.

我们要在此引入一些细微的差别，因为每当你采取的立场与先前的立场略有不同时，人们就会假设这是彻底的翻转，即我们将从 100% 看多转为 100% 看空。这并非我们的本意。

Right now, the consensus bear take is that the music has stopped, and we all start reciting Jeremy Irons' monologue in Margin Call. **Instead, we are expecting a coda: the music slightly changes, in either key and pacing, and it serves as a transition into a new melody.**

目前，共识看空观点认为音乐已经停止，我们都开始背诵杰瑞米·艾恩斯在《商海通牒》中的独白。相反，我们预期会有一个尾声：音乐在调性和节奏上发生轻微变化，并作为过渡引入一段新的旋律。

...Meets Macro Expansion .....遇上宏观扩张

If we are essentially making the argument here that the peak expectations in the AI infrastructure trade have passed (*this is a fuzzy subjective on second derivatives, rates*

of change, and overall market hype), aren't stocks, and the economy thereafter, screwed?

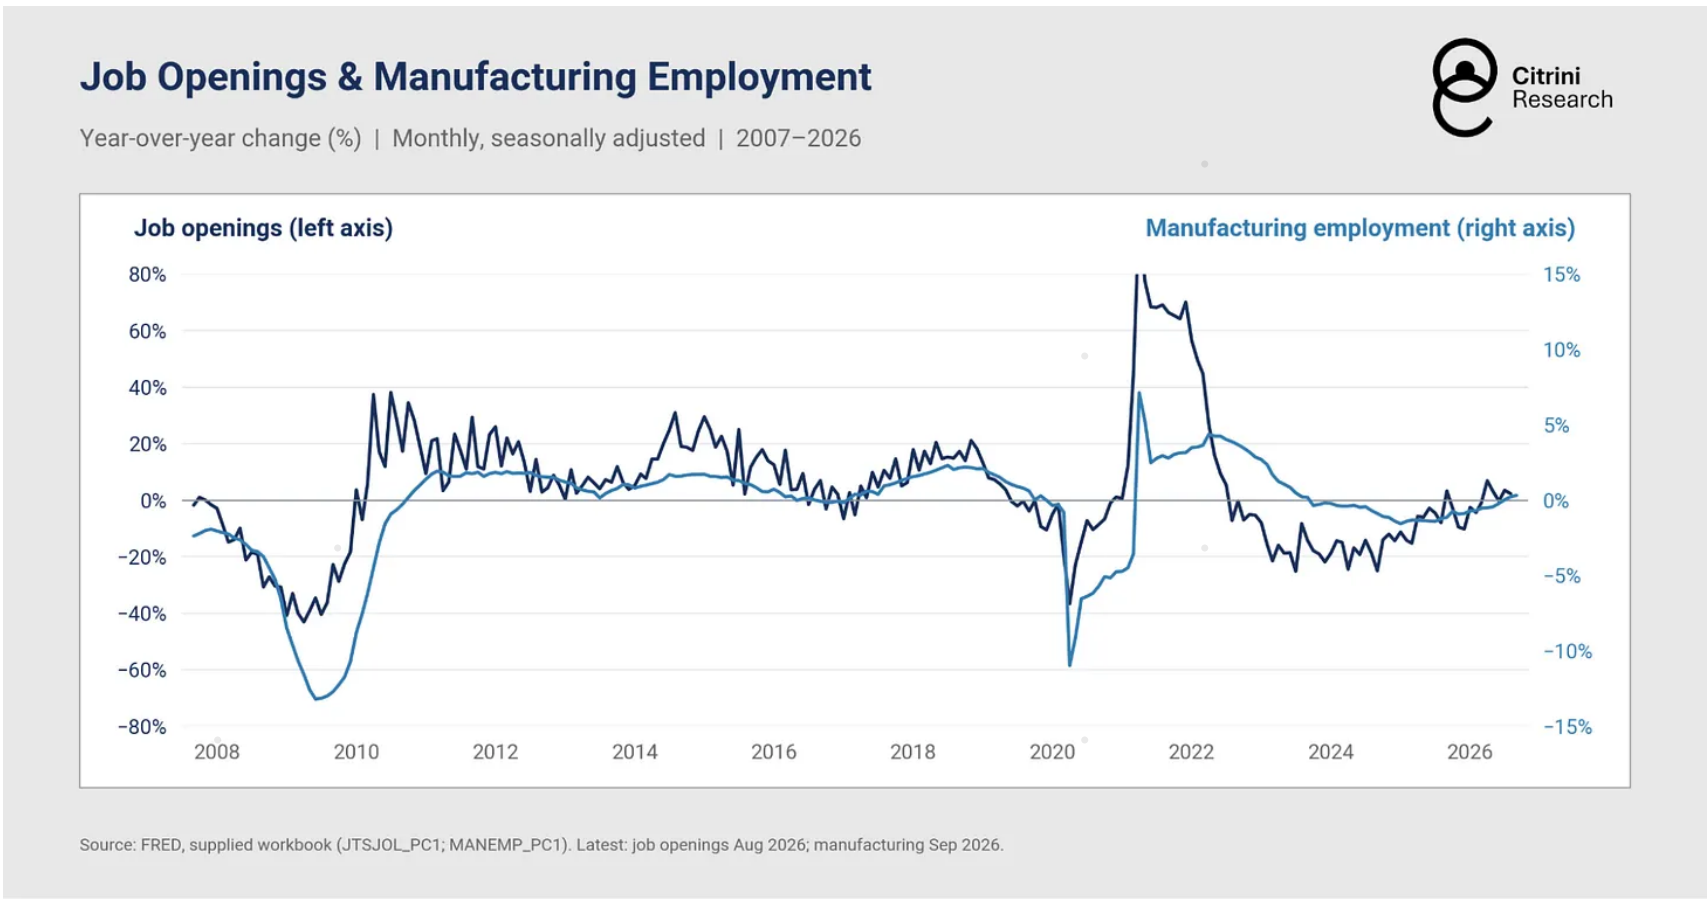

如果我们在此提出的论点本质上是，AI 基础设施交易的峰值预期已经过去（这是关于二阶导数、变化率和整体市场炒作的一个模糊的主观判断），那么股市以及随后的经济，岂不是完蛋了？

On some timeframe maybe...? But maybe not. It's certainly not what we are seeing today, ***it certainly isn't happening tomorrow***.

在某个时间范围内也许……吧？但也可能并非如此。这当然不是我们今天所看到的，这明天也肯定不会发生。

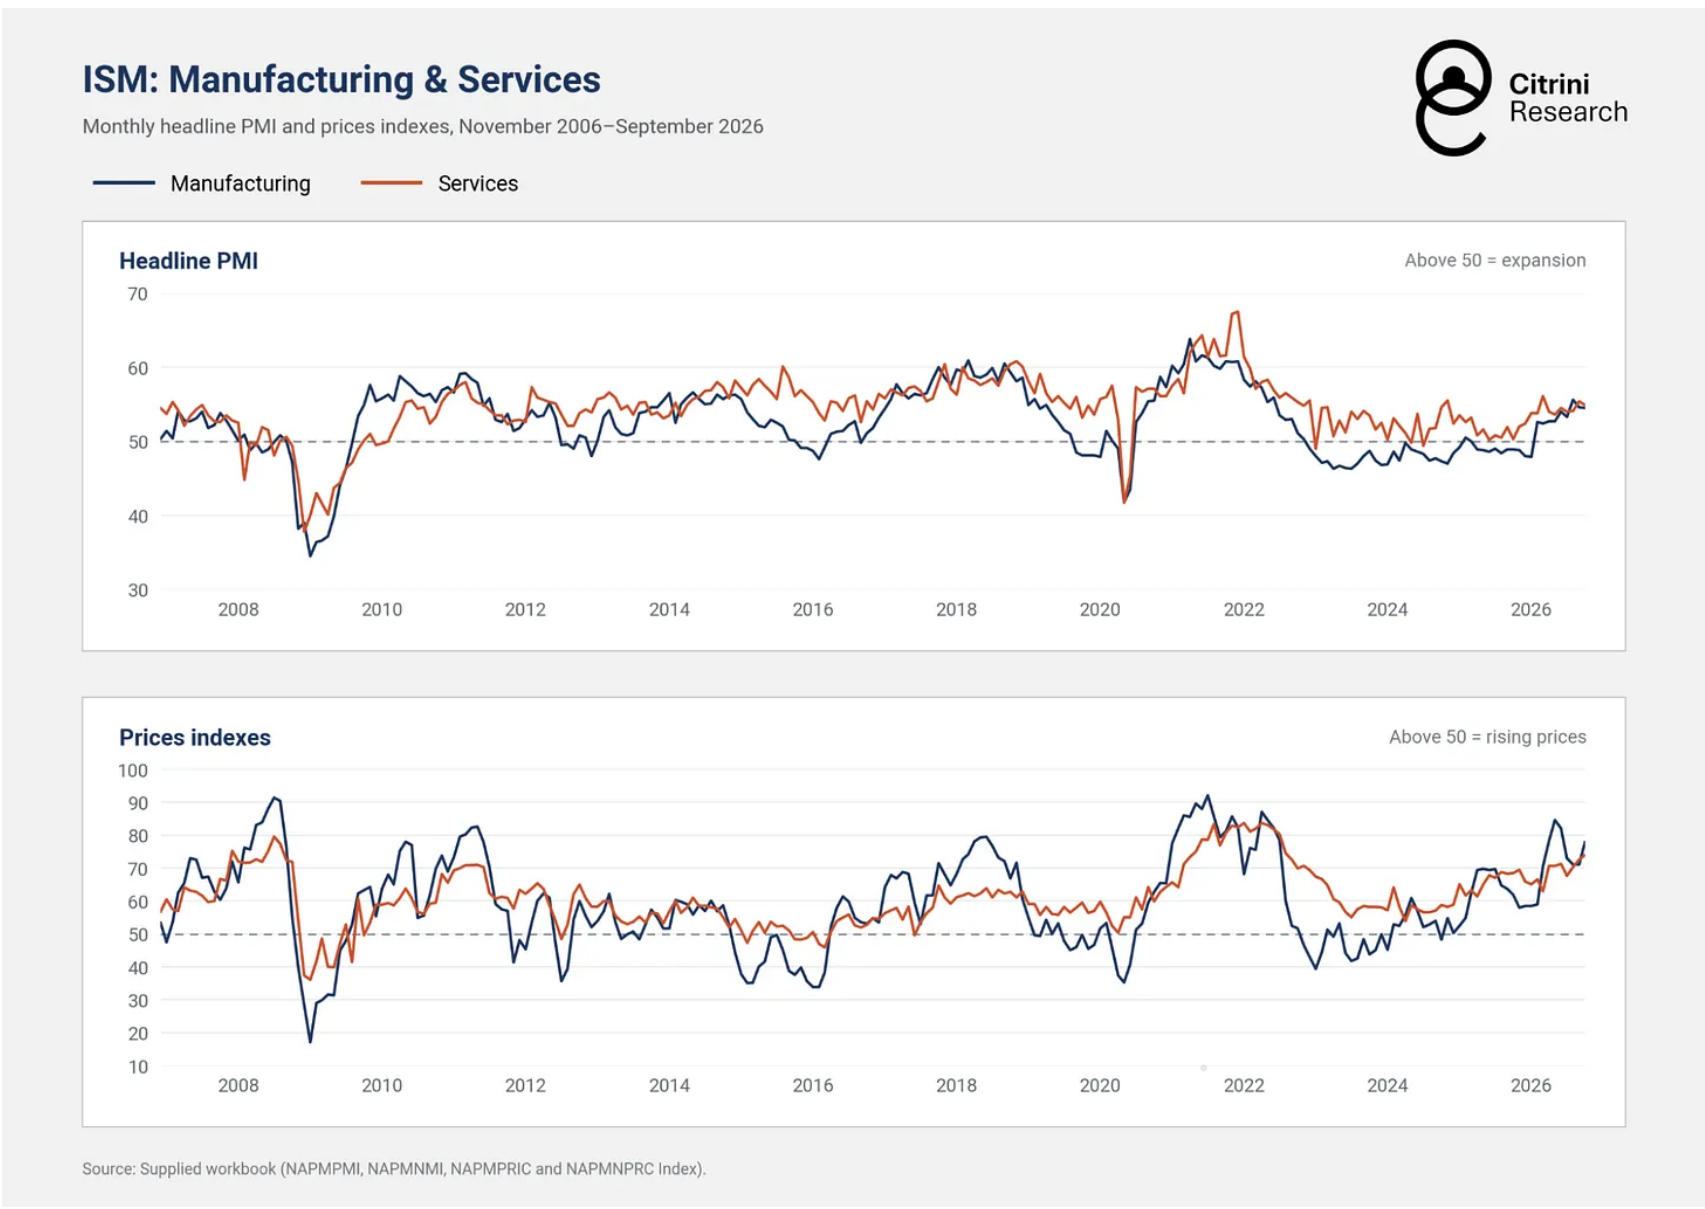

Rather we are seeing the opposite. For the first time in four years, we are seeing an increase in broad job openings with particular strength in cyclical manufacturing, where employment is turning higher. A four-year easing cycle and investment boom from AI seems finally to have pushed the overall economy back to more signs of broad-based expansion and inflationary pressure.

相反，我们看到的恰恰相反。四年来，我们首次看到整体职位空缺增加，其中周期性制造业尤为强劲，其就业人数正在回升。四年的宽松周期与 AI 引发的投资热潮，似乎终于将整体经济推回至更多出现全面扩张和通胀压力的迹象。

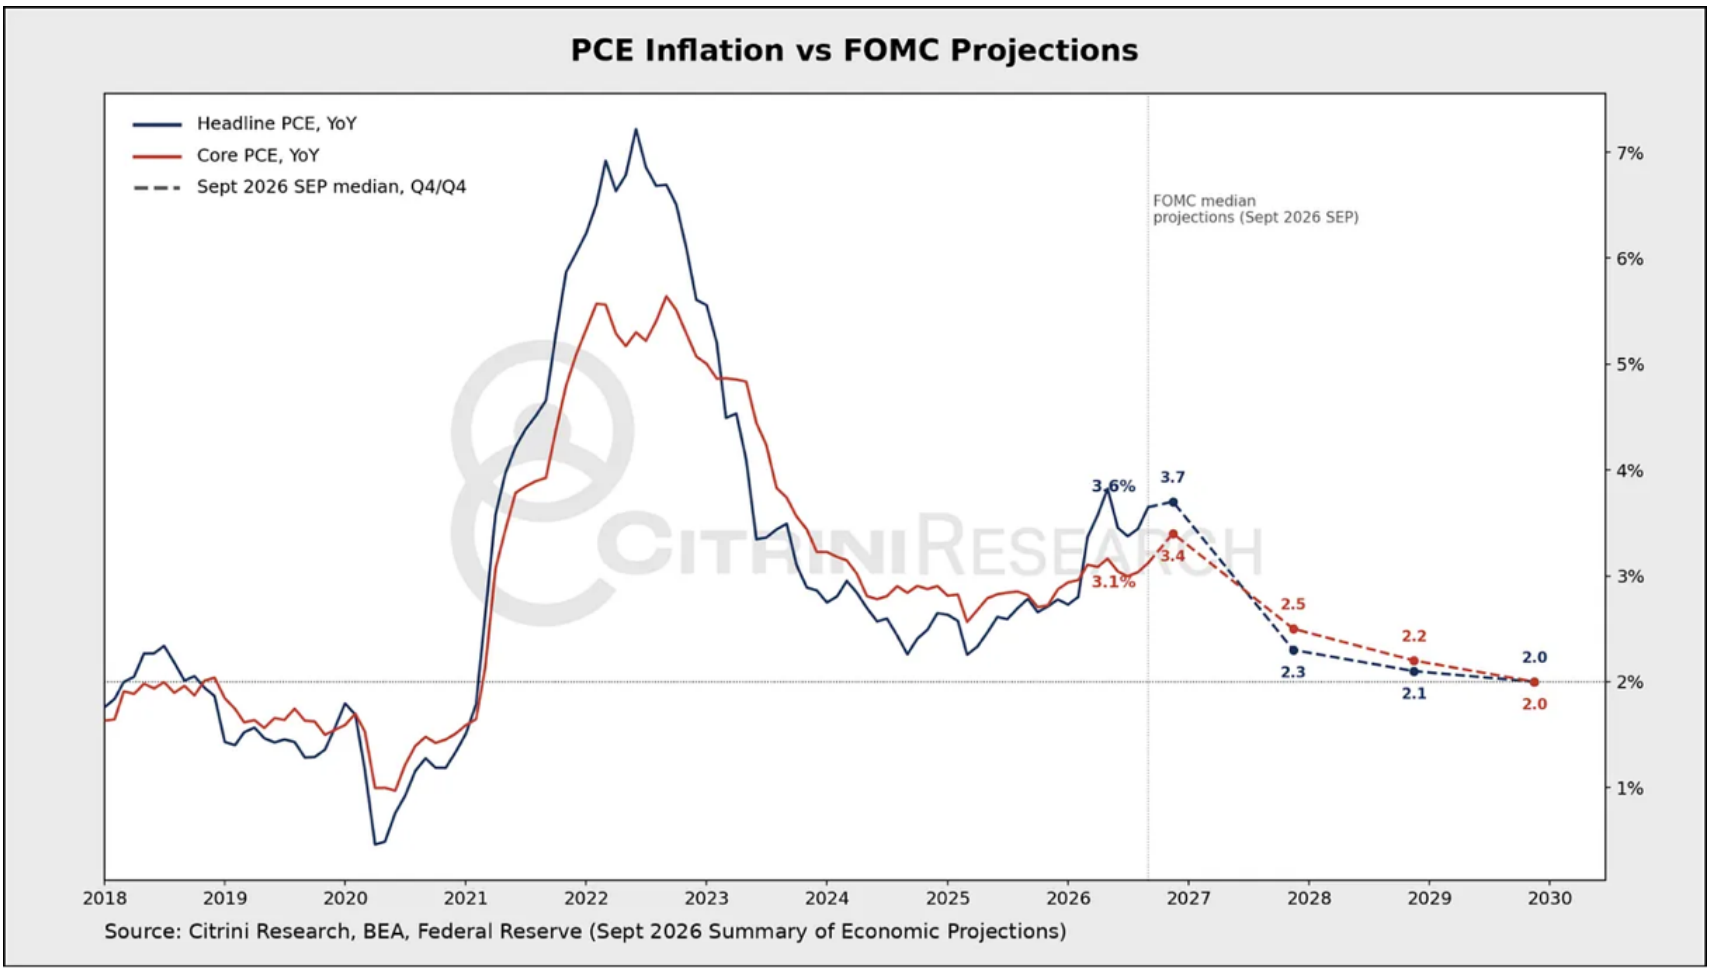

The survey data looks the same. Headline readings across both services and manufacturing are at multi-year highs, while pricing pressure continues to move higher.

调查数据也是如此。服务业和制造业的总体读数均创多年新高，而价格压力则继续攀升。

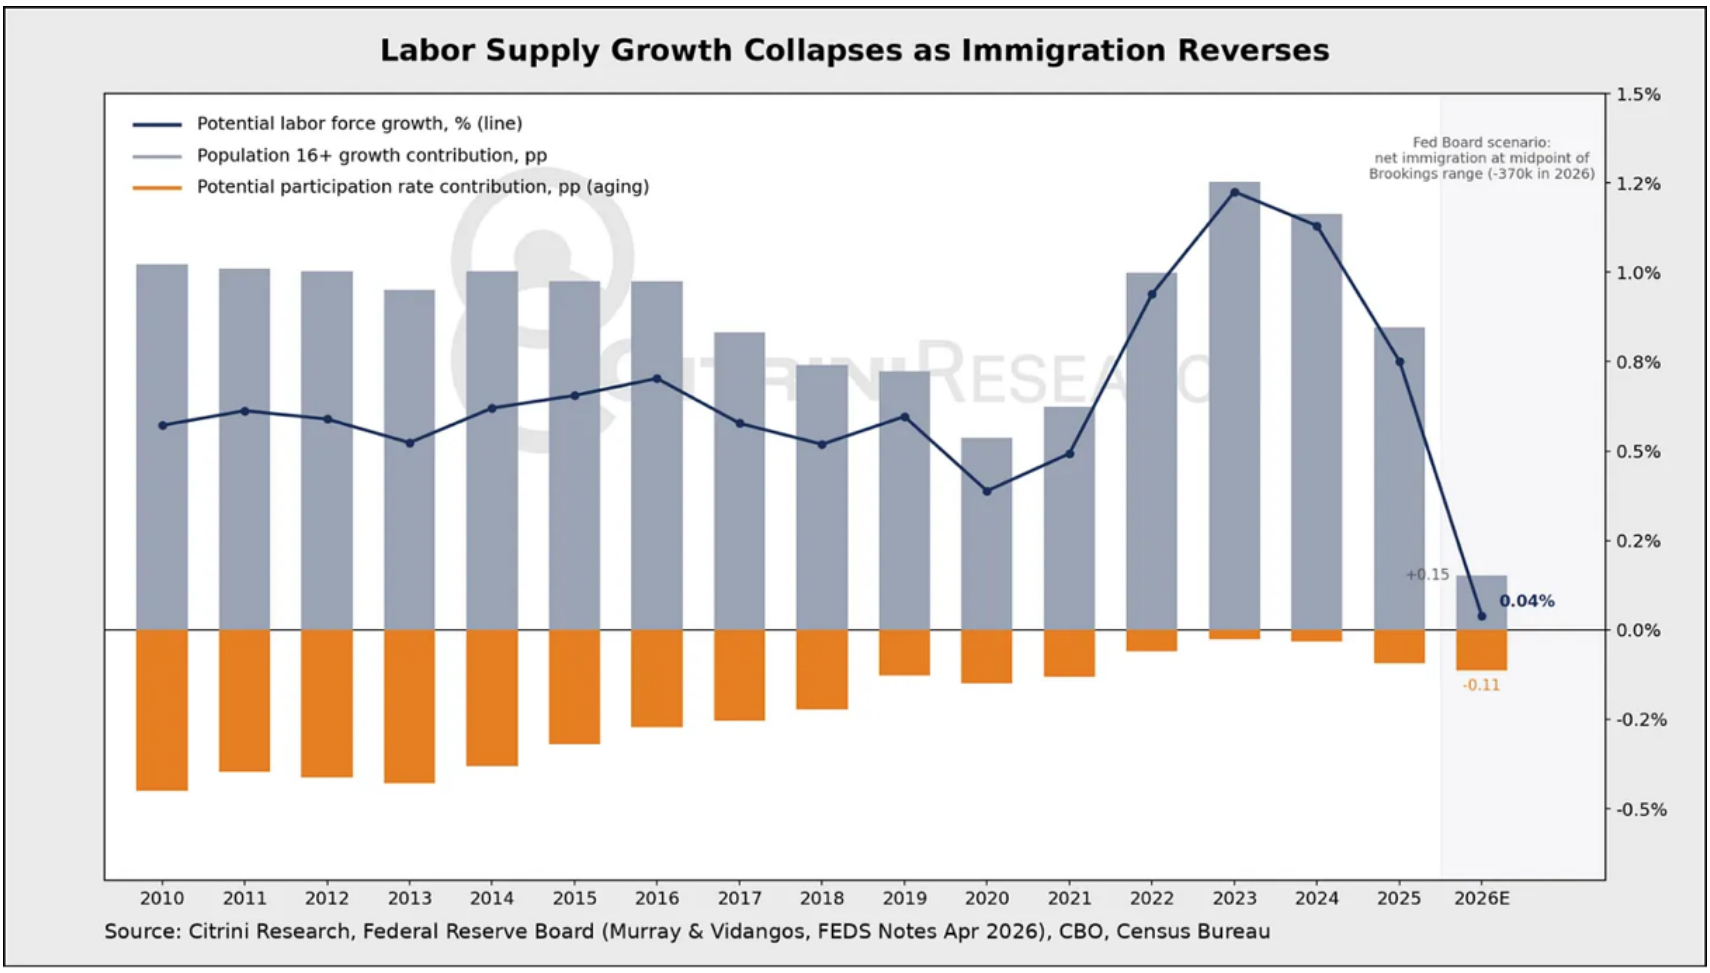

Some of this is clearly being driven from surging investment in AI, and we doubt the economy could survive a true "AI bust", but there are plenty of other drivers like OBBBA tax breaks, tariff relief and onshoring that will persist regardless. Pricing pressure and inflation are still running well above the Fed's target and labor market dynamics are supportive of wages.

其中一部分显然是由 AI 投资的激增所推动的，我们怀疑经济能否承受真正的“AI 泡沫破裂”，但还有许多其他驱动因素，如 OBBBA 减税、关税减免和本土化，无论怎样这些因素都将持续存在。定价压力和通胀仍远高于美联储的目标，且劳动力市场动态对工资构成支撑。

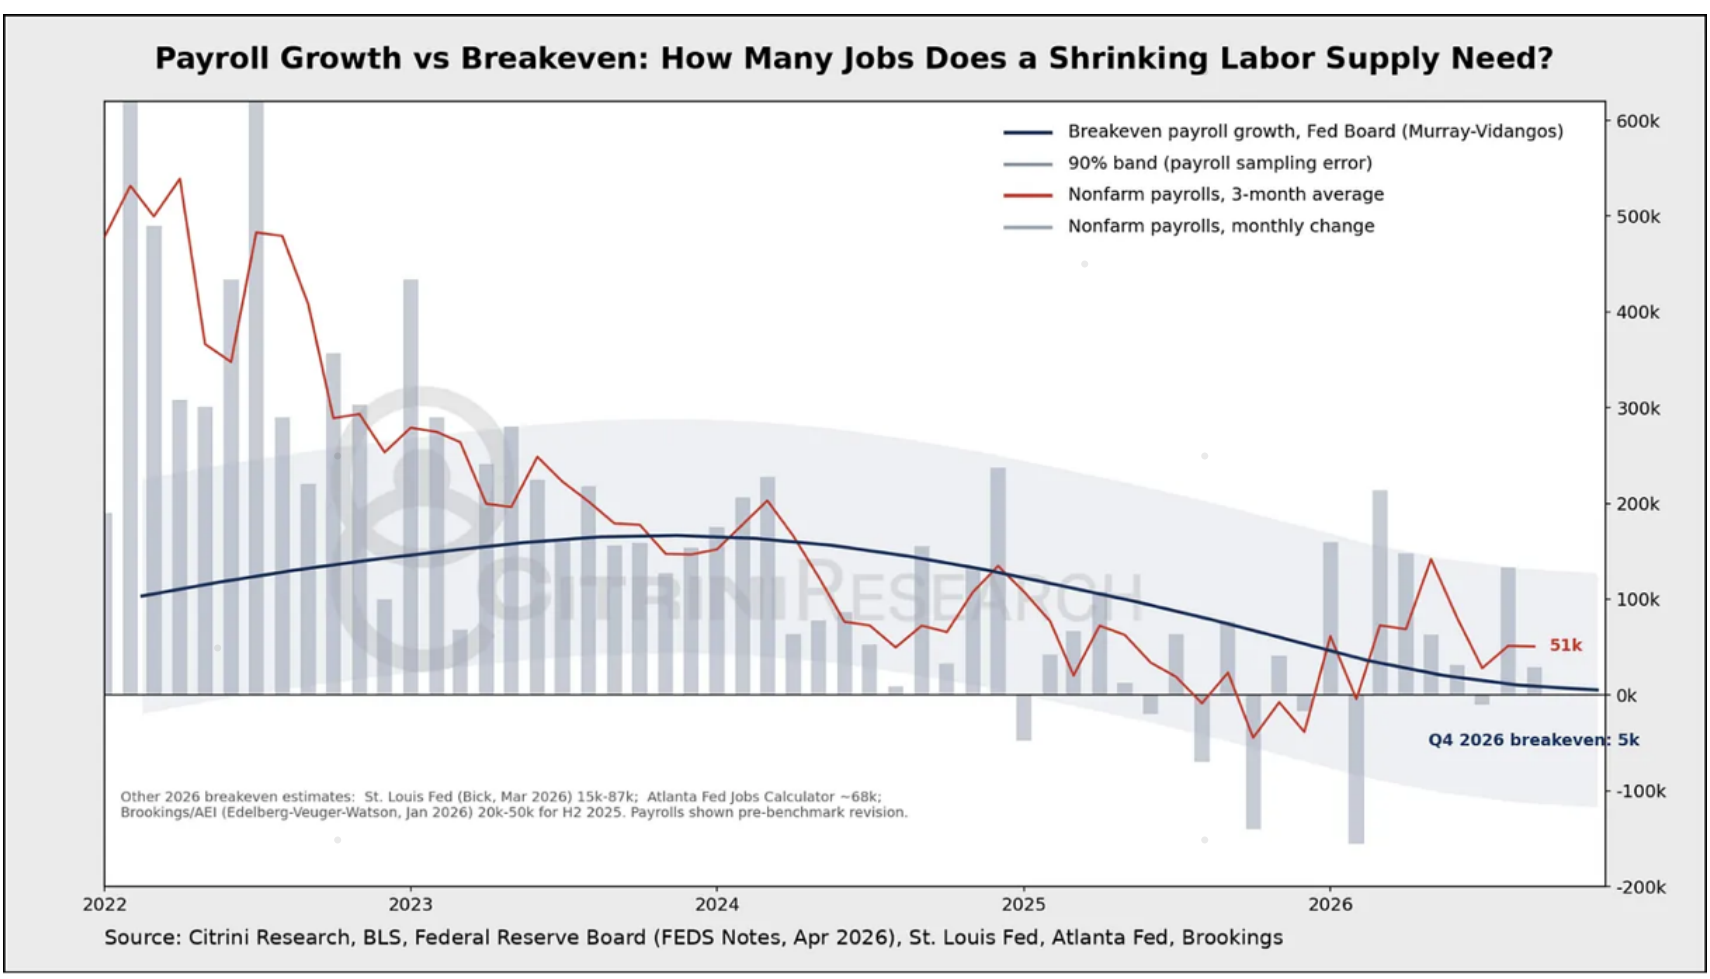

On job creation breakevens, the Fed Board's Murray-Vidangos series puts breakeven at 155,000 in 2023–24 (immigration surge), 85,000 in 2025, and 5,000–10,000 by late 2026 as net immigration goes negative. Payrolls are running 51,000 on a 3-month basis and 68,000 YTD, which means the labor market is absorbing supply at or above breakeven even if the headline numbers look anemic.

关于就业创造的盈亏平衡点，美联储委员会的 Murray-Vidangos 系列数据将该平衡点设定为 2023–24 年的 155,000（移民激增）、2025 年的 85,000，以及到 2026 年底净移民转为负数时的 5,000–10,000。薪资单人数在 3 个月基础上为 51,000，年初至今为 68,000，这意味着即使总体数据看起来疲软，劳动力市场仍在以达到或超过盈亏平衡点的水平吸收供给。

A lower supply of labor also means that what would have been relatively soft job opening numbers a few years ago can still result in decent support for wages. Indeed, this was probably part of the political calculus behind targeting immigration as a policy variable.

劳动力供给减少也意味着，几年前原本会显得相对疲软的职位空缺数据，如今仍能为工资提供不错的支撑。事实上，这或许就是将移民作为政策变量加以针对的政治盘算中的一部分。

And even if there is a hard reset in AI investment (which is far from a foregone

conclusion), the real economy doesn't break down at the first whiff of weakness.

而且，即使 AI 投资出现硬重启（这远非定局），实体经济也不会一有疲软迹象就崩溃。

Our view on AI has to do with slowing growth colliding with a funding mismatch — but all the existing development still has years before project completion. And while increased production can help relieve bottlenecks in memory and power, you can't spin up new electricians. Labor is a bottleneck that has not been solved, and we expect it to stick around for a while absent a total collapse.

我们对 AI 的看法与增长放缓和资金错配的碰撞有关——但所有现有的开发项目距离完工仍需数年时间。尽管产能提升有助于缓解内存和电力瓶颈，但你无法凭空变出新的电工。劳动力是一个尚未解决的瓶颈，我们预计除非发生全面崩溃，否则它将在一段时间内持续存在。

There's a long way between "stocks drop on 2029 memory price forecasts" and "empty datacenter worksites," but the market has an uncanny ability to discount and rerate before the bad news finally hits.

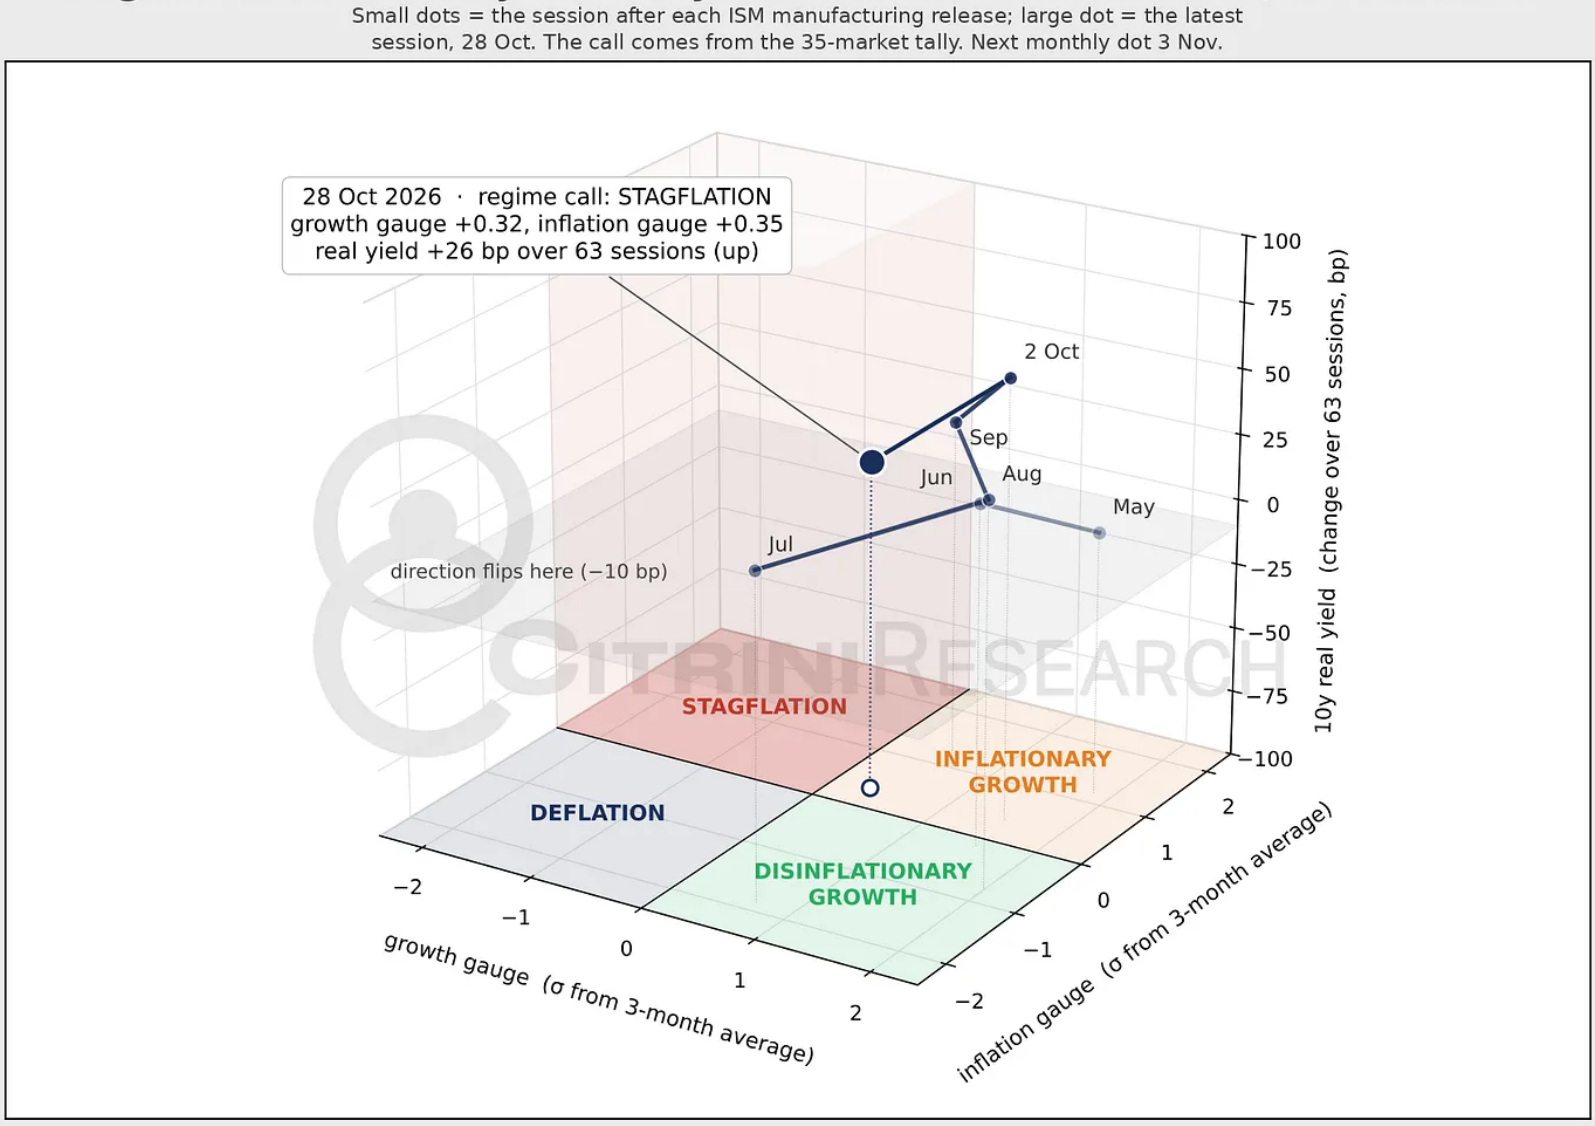

从"因 2029 年内存价格预测而导致股价下跌"到"数据中心工地空空如也"，两者之间还有很长的距离，但市场拥有一种不可思议的能力，能在坏消息最终降临之前就进行折现和重新定价。

It's a risky game to simply take a prior cycle and assume it repeats in the same fashion – think about how many were offsides on the surefire "yield curve inversion" recession indicator in 2022. But there are enough similarities to take seriously. ***The market smells like "late cycle expansion".***

仅仅拿前一个周期并假设它会以同样的方式重复，是一场危险的游戏——想想 2022 年有多少人因为确信"收益率曲线倒挂"这一衰退指标而站错了队。但其中也有足够多的相似之处，值得我们认真对待。市场闻起来有"周期末期扩张"的味道。

Since we're already doing some macro handwaving, let's add real rates as an additional dimension:

既然我们已经在做一些宏观层面的粗略推演，那就把实际利率作为另一个维度加进来：

Economic data is still showing expansion, but in our **Regime Cube**, 9 of the 14 asset pairs we track are trading with a stagflationary tilt. The prime example would be cyclicals vs defensives (discretionary, industrials and materials against staples, utilities and health care): down 2.4% over the past month, 2.9% over three months and 6.9% over six months, with the trend pointing down. While the inflation gauge and growth gauge base the model in inflationary growth, the overlays of asset price behavior and 10-year real yields move the call towards the stagflation quadrant.

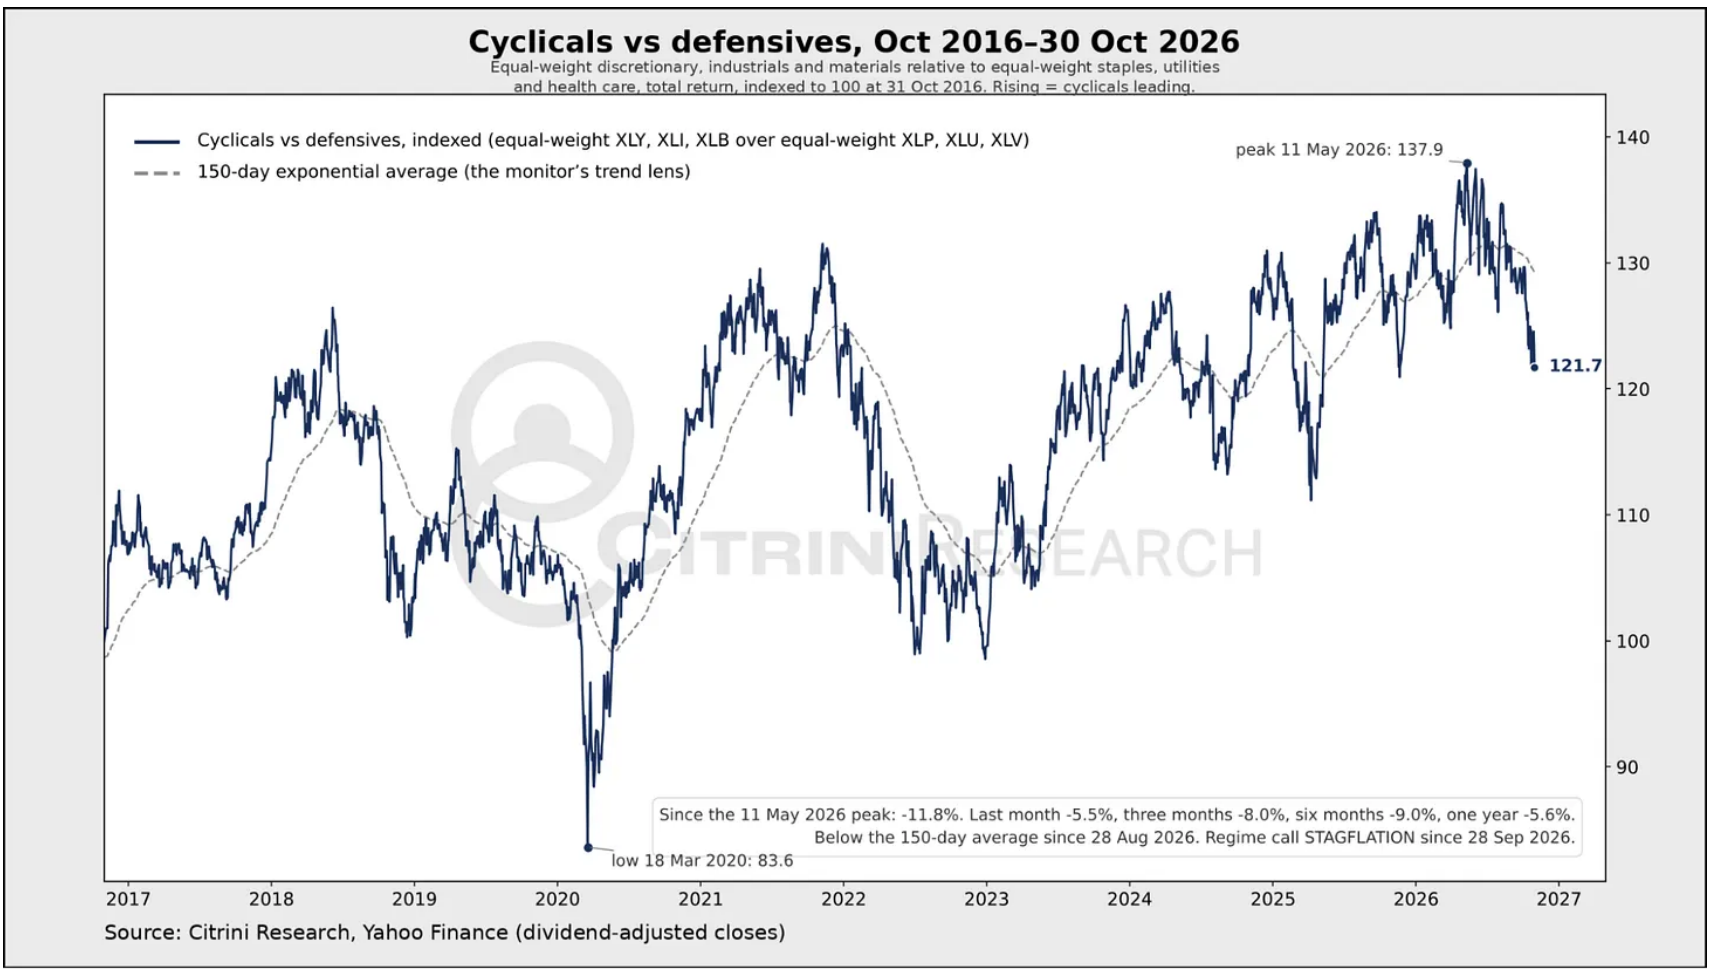

经济数据仍显示扩张，但在我们的体制立方模型中，我们追踪的 14 个资产组合中有 9 个正呈现出滞胀倾向。最典型的例子是周期股与防御股的对比（可选消费、工业和材料对比必需消费、公用事业和医疗保健）：过去一个月下跌 2.4%，三个月下跌 2.9%，六个月下跌 6.9%，且趋势向下。尽管通胀指标和增长指标使该模型基于通胀性增长构建，但资产价格行为和 10 年期实际收益率的叠加因素将判断推向了滞胀象限。

	Regime call	Real rates now	If real rates fall	Tape 1m	Tape 3m	Overall
Energy	+	+	−	+	+	+
Health care	+	+	·	+	+	+
Staples	+	·	−	+	+	+
Utilities	+	+	+	+	−	+

Value over growth	+	+	−	+	+	+
Small over large	−	·	·	+	−	−
High beta over low vol	−	·	+	−	−	−

As of 30 Oct 2026 close

This trend is far from nascent in some pairs, so while we remain cognizant of the big-picture shift, we also don't want to press on this trade expression blindly. The "defensive" rotation has now been in play for months – pushing some staples into nosebleed territory while also setting the stage for a relief on the AI side and momentum.

这一趋势在某些货币对中远非处于萌芽阶段，因此虽然我们仍关注大局的转变，但我们也不想盲目地推进这一交易表达。“防御性”轮动已经持续数月——将部分必需品推至高估区域，同时也为人工智能板块和动量股的缓解奠定了基础。

This is what late cycle expansion looks like. Do you pray for a second leg up in Beta and Momo (massive downside if you're wrong) or do you chase low-growth dogs at even higher valuations?

这就是周期末段扩张的样子。你是祈祷 Beta 和动量股（Momo）的第二波上涨（如果判断错误，下行风险巨大），还是追逐估值更高的低增长冷门股？

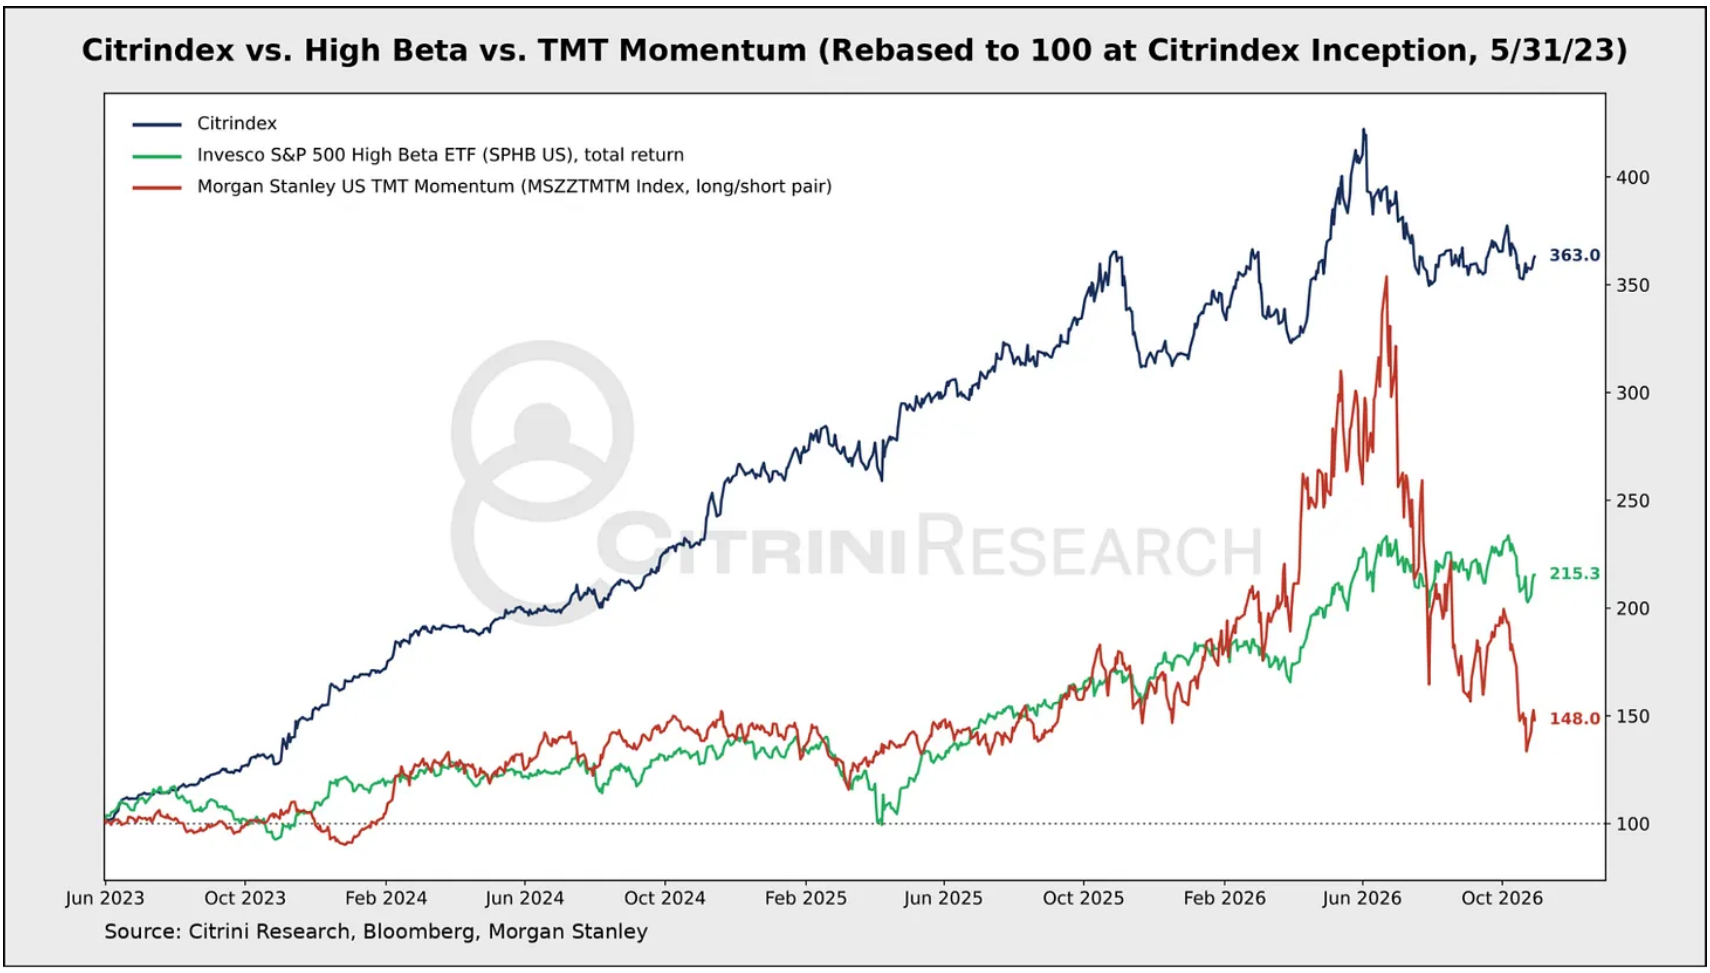

If you're sitting on the fat gains of the bull cycle, maybe it's time to pick up your ball and go home… or maybe it's time to start playing small ball.

如果你坐拥牛市周期的丰厚收益，也许是时候收手离场了……或者也许是时候开始打“小球”了。

What's the Trade? 交易机会是什么？

To date we've intentionally maintained broad baskets focused on big themes with decent beta.

迄今为止，我们有意识地维持了专注于具有可观贝塔值的宏大主题的宽泛组合。

High-beta stocks provide leverage and amplify returns – a feature in the bull market and a failure in a bear. It's hard to pivot strategies at the bottom of a local selloff but some longer-term perspective is useful. We aren't reacting to the selloff last week, or a rally today – we're responding to a market cycle that has been years in the making, armed with a wide enough agreement across signals, subjective and quantitative.

高贝塔股票提供杠杆并放大收益——在牛市中是优势，在熊市中则是败笔。很难在局部抛售的底部转变策略，但一些长期视角是有用的。我们不是在对上周的抛售或今天的反弹做出反应——我们是在应对一个酝酿多年的市场周期，并且拥有跨越主观和量化信号的足够广泛的共识。
