Arm Q2 FY27: Securing supply for AGI CPU as a major milestone

Major milestone achieved for Arm AGI CPU. Arm has secured contract with suppliers for $2bn of AGI CPUs next year, as well as customer contracts of $2bn. This is a major step towards lifting the AGI CPU sales from $1bn to $2bn next year. Securing supply for foundry, substrate, memory etc. is challenging but Arm managed to achieve it, which is also a testimony of Arm's supply chain capabilities. The next steps would be execution and delivery of the chips; Arm expects to provide an update in the next earning, and full update in the next Arm Everywhere event, probably around May 2027. Margin for the additional $1bn (if materialized) doesn't seem lower than the first $1bn despite higher cost. Besides AGI CPU, **Arm continued to gain share in Server CPUs** as Arm architecture is expanding market share from 50% to 60% in big CSPs exiting 2026, as AWS, Google, Microsoft and Nvidia all ramp up their Arm server CPUs rapidly for AI head node and agentic workload.

Continued progress for licensing revenue, which grew 50% YoY to $773mn, as major licenses in Q2 including 3 ATA and 4 CSS contributed to the growth. Looking into Q3/Q4, company is confident for the big license revenue to be stable and up, given the visibility for subscription renewals. The steady inflation in subscription rates provides a solid baseline growth for Arm in case of headwinds. SoftBank contribution is slightly up to $209mn this quarter, and is expected to remain stable until the chips enter production.

Slower royalty growth at 8% YoY to $670mn due to smartphones, where headwind started from Q4 FY26, so high comp will lapse after next quarter. Meanwhile, data center royalty doubled YoY to offset the smartphone weakness, and server royalty will become bigger than mobile in a few years. Next year royalty is expected to reaccelerate to ~20% YoY, assuming smartphone shipment stabilizes.

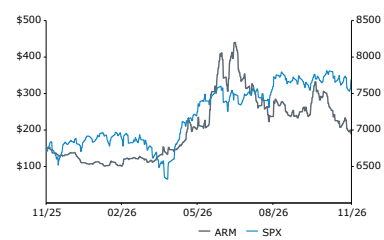

Outperform. Weaker mobile royalty is offset by stronger licensing; AGI CPU is likely to provide upside while DC story remains fully intact. We leave forecasts largely unchanged while awaiting next AGI CPU upside. Applying a lower 32x blended multiple (20x for the chips business and 45x for the IP) (prior 42x) to our unchanged FY31 EPS estimate of $11.42 yields a PT of $370.00 with 93% implied upside. We reiterate Outperform on Arm.

DETAILS

Q2 RESULTS AND Q3 GUIDANCE:

Q2 results were strong with revenue, GP, OP and EPS all ahead of consensus. Revenue grew 27% YoY and beat consensus by 4.6%, driven by exceptionally strong licensing activity and continued growth in royalties (Exhibit 1).

- **License and other revenue increased 50% YoY** as customers accelerated long term commitments to Arm technology, with three new ATA agreements signed and four additional CSS licenses, including data center and smartphone programs.
- **Royalty revenue grew 8% YoY**, with Cloud AI remaining the largest growth driver as data center royalties doubled YoY. Physical AI royalties increased 50% YoY, driven by automotive and robotics adoption, while Edge AI royalties were roughly flat as higher memory prices continued to pressure smartphone demand, particularly in mid and low tier devices.
- Management also highlighted **increasing Arm AGI CPU traction**, supported by multiple customer purchase orders extending through CY27, with first commercial shipments still expected in F4Q27also highlighted accelerating demand for Arm AGI CPU, with multiple customer purchase orders secured through CY27 and first commercial deliveries remaining on track for F4Q27.

Q3 guidance was broadly in line with consensus, with revenue and EPS modestly ahead. Revenue guidance implies ~24% YoY growth and is 0.6% above consensus, supported primarily by continued strength in licensing revenue. Management remains constructive on near term demand trends, highlighting continued strength in licensing activity, resilient Cloud AI and Physical AI royalties, and growing confidence in Arm AGI CPU demand. Guidance implies another quarter of strong double-digit growth despite ongoing smartphone-related headwinds and continued investment in engineering resources and next generation products (Exhibit 2).

- **Licensing:** Management expects license and other revenue to grow slightly above 50% YoY, driven by strong customer demand, healthy visibility into the licensing pipeline, and ongoing adoption of ATA and CSS agreements across both data center and mobile applications. Management also noted the licensing pipeline remains stronger than expected at the start of the year.

- **Royalties:** Royalty revenue is expected to remain supported by Cloud AI and Physical AI, offset by ongoing weakness in Edge AI due to softer smartphone demand and a tougher comp base. Management expects royalty revenue to grow at a low teens sequential rate and low single digits YoY. Cloud AI continues to benefit from expanding Arm server deployments and increasing hyperscaler adoption, while Physical AI remains supported by automotive and robotics. Management also reiterated expectations for Edge AI royalties to reaccelerate once smartphone market conditions normalize.

- **Opex / EPS:** Opex guidance was essentially in line with consensus as the company continues investing in engineering capacity, next generation platforms, compute subsystems and the Arm AGI CPU product family. As a result, EPS guidance was slightly ahead of consensus.

Q4 AND LONG TERM OUTLOOK

- **Q4 guidance:** Management expects Q4 FY27 total revenue growth of approximately 25% YoY, similar to Q3, but with more balanced royalty and licensing contributions. Mobile royalties should recover as comparisons ease. Management expects sequentially similar licensing revenue in Q3 and an increase in Q4, supported by ATA/CSS agreements and recognition milestones.

- **Royalty:** Overall royalty growth should return to approximately 20% in FY28, with mobile revenue growing at double digits despite approximately flat smartphone units, supported by Armv9 and CSS adoption. DC royalties doubled YoY, with management expecting triple digit growth for several years (doubling every year) and eventually exceeding smartphone royalties. Arm's server share at top hyperscalers increased from 15% in CY24 to over 50% in CY25 and should exceed 60% by CY26 end, supported by Graviton, Axion, Cobalt and NVIDIA, including accelerator host CPUs. These figures refer to top hyperscalers, not the global server market.

- **Licensing:** The pipeline is stronger than anticipated, supported by incremental ATA/CSS agreements rather than renewals alone, as AI and agentic workloads drive demand for additional technologies and product variations. Periodic subscription renewals and revenue recognition milestones contribute to quarterly variability, with some agreements falling in Q4. Management didn't provide formal FY28 licensing guidance. Stronger licensing activity should support future royalties as designs enter production over the following 12 to 24 months.

- **AGI CPU:** Management highlighted increased confidence in up to $2Bn cumulative revenue across FY27 and FY28, supported by customer orders and supply agreements. Demand exceeds $2Bn, with supply constraints largely resolved. Execution, deployment and shipment timing remain the principal uncertainties. Initial commercial shipments remain targeted for Q4 FY27, with detailed Q4 guidance in February and a fuller FY28 update following initial deliveries. Meta remains the principal initial customer, alongside additional customers. Higher core counts and ASPs support longer term growth, with an 18 to 24 month product cadence and potential networking/I/O additions. First generation GM commentary ended at ~30% to 40%, with 50%+ targeted for subsequent generations. **While management did not raise the $15Bn FY31 AGI CPU revenue target, it struck a more confident tone and indicated potential upside to longer term targets, subject to successful execution of the initial AGI CPU revenue ramp.**

SOFTBANK

SB contributed $209Mn licensing/design services revenue, up 17% YoY. Management expects a similar quarterly run rate for the remainder of FY27. Callbacks advised maintaining that assumption pending a product announcement. Most work concerns a differentiated DC accelerator, not a "me too" product and no launch date was committed. At least half the quarterly $209Mn supports R&D. Successful commercialization could replace the current arrangement with larger licensing and/or royalty revenue, while R&D continues. AGI CPU remains 100% Arm developed.

MODEL UPDATES

In line with management commentary, we raise near-term licensing expectations while remaining more cautious on royalties given continued smartphone weakness. Reflecting guidance for Q4 revenue growth broadly in line with Q3, with growth becoming more balanced between licensing and royalties as smartphone comparisons ease and Edge AI begins to recover, we increase our FY27 revenue and EPS forecasts and now sit above consensus.

Looking further out, our FY28-FY31 estimates remain broadly unchanged and continue to reflect triple digit DC royalty growth, rising Arm server share, expanding CSS adoption and accelerating AGI CPU contributions. Management reiterated confidence in achieving up to $2bn of AGI CPU revenue across FY27-FY28, supported by improving supply visibility and stronger customer demand. While execution remains the key risk, management indicated demand is increasing, not declining, and AGI CPU shipments remain on track to begin in Q4.

We continue to believe the DC opportunity remains underappreciated. **Applying a lower 32x blended multiple (prior 42x), 20x for the chips business and 45x for the IP business, to our unchanged FY31 EPS estimate of $11.42 yields a PT of $370, implying 93% upside**. We reiterate our Outperform rating.

VALUATION METHODOLOGY

ARM Holdings PLC

For Arm, we apply a 32x blended multiple (20x for chips business and 45x for IP business) to our FY31 EPS estimate of $11.42 to get a PT of $370.

RISKS

ARM Holdings PLC

Downside risks to our price target for Arm include slower growth in the new AGI CPU business and a lack of market share gains in the server CPU market; a slower increase in royalty rates across different end-markets; slower v9 and CSS penetration; higher-than-expected costs to ramp up the AGI CPU business; and higher OPEX required to sustain the massive projected growth.
