4Q26 guidance Rev +9-10% QoQ: Hua Hong expects 4Q26 revenues of US$1,080–1,090mn, implying 9%–10% QoQ growth, with GM at 25%–26% (vs. 24.6% in 3Q26). The revenue guidance midpoint is 19% / 13% above GSe / Bloomberg consensus, while the GM midpoint of 25.5% is 9.3ppts / 8.3ppts higher. The higher revenue and GM outlook versus our previous estimates mainly reflects the consolidation of Huali Micro and the resulting change in the group's scale and business mix. We remain positive on Hua Hong, supported by China AI spending and customers' "China for China" strategy to better secure supply. We expect generative AI to support demand for embedded / standalone NVM and PMIC products, while Huali Micro broadens the group's 12-inch manufacturing platform and technology-node coverage. Together with continued capacity investment, we expect the integration to support longer-term revenue growth. Maintain Buy.

3Q26 results Beat: Revenues reached US$987mn, 24% / 25% above GSe / Bloomberg consensus, with GM at 24.6%, versus GSe / consensus at 16.2% / 17.2%. The opex ratio was 10.2%, below GSe / consensus at 12.8% / 13.9%, with operating income reaching US$142mn versus US$27mn / US$26mn expected. Net income was US$123.4mn, 81% / 128% above GSe / consensus. The headline revenue and margin differences mainly reflect Huali Micro consolidation rather than an equivalent improvement in the existing business. Excluding Huali Micro, revenues were US$803.4mn and GM was 19.9%, above the previous guidance ranges of US$770–780mn and 16%–18%.

Valuation: We continue to use a discounted P/E valuation method for Hua Hong. Our 12-month target price remains based on a 2030E target P/E, discounting back to 2027E. With our earnings estimate changes and a refreshed target multiple, **we lower our 12-month target price to HK$280 from HK$289 previously**, based on a 63.0x 2030E P/E (versus 75.0x previously) and an unchanged COE of 9.3%. Our target multiple continues to be based on the correlation between peers' P/E and the sum of forward-year NI growth and OPM. Maintain Buy.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our universe of rated stocks) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Early-Stage Biotech, Coverage Suspended or Not Covered), is deemed Neutral. Each region manages Regional Conviction Lists, which are selected from Buy rated stocks on the respective region's Investment Lists and represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction Lists are managed by the Investment Review Committee or other designated committee in each respective region and do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at
