Today was the lowest volume trading session of the year. As expected, activity muted and sparse news to trade on for the holiday today (exchange volumes -20.7% vs 20d avg). Standouts included semis weakness with Memory leading the group lower, driven by: combination of 1) China memory progress, 2) follow-through from Korea (KOSPI -365bps), 3) ongoing turn in flows (desk much better for sale across memory/HDDs into the end of last week). In addition, Mag7 continues to trade firm, today META +4% on the introduction of "Muse Wonder" + ongoing "flight to quality" rotation. Elsewhere, crude continued to move higher on weekend escalations in the Middle East. Our floor was a 2 on a 1-10 scale in terms of overall activity levels with overall client skews benign.

今天是今年迄今成交量最低的交易日。假日期间，市场活动如预期般清淡，可供交易的消息有限（交易所成交量较过去 20 个交易日均值低 20.7%）。值得关注的是，半导体板块走弱，其中存储芯片领跌，主要受以下因素推动：1）中国存储行业取得进展；2）韩国市场跌势延续（KOSPI 下跌 365 个基点）；3）资金流向持续转变（上周末临近时，交易台明显更容易卖出存储芯片和硬盘股）。此外，七大科技巨头（Mag7）延续强势，META 今日上涨 4%，受推出“Muse Wonder”及“追求高质量资产”的轮动持续推动。其他方面，受周末中东局势升级影响，原油继续走高。按整体市场活动水平 1 至 10 分计，我们交易大厅的活跃度仅为 2 分；客户整体交易倾向温和。

Week ahead: CPI Wednesday the main event, consensus 0.6% headline, 0.2% core. A 10bp downside surprise on core would be meaningful for rates. Banks start Tuesday, ASML Wednesday, TSMC Thursday, plus PPI, retail sales and then Warsh Friday.

未来一周：周三公布的 CPI 是主要焦点，市场共识预期总体 CPI 为 0.6%、核心 CPI 为 0.2%。核心 CPI 若低于预期 10 个基点，将对利率市场产生显著影响。银行业财报季周二开启，ASML 于周三公布业绩，台积电于周四公布业绩；此外还有 PPI、零售销售数据，以及周五的 Warsh。

DERIVS: The vol desk was quiet as fixed income was closed for the holiday. Despite various catalysts this week such as EPS kicking off, CPI on Wednesday, and several Fed speakers, the S&P implied move through Friday's close went out at 1% last week (~96bps as of this morning). That registers as one of the lowest 1w implied moves in the last ~6y. Flow wise, we saw clients turn to HYG downside given the bond market closure … 50k Jan 77 73 put spreads were bought in the market (nearly 300k total options trading today). As we continue to witness a lack of conviction, low sentiment, and narrow breadth, the desk thinks S&P upside is cheap into month-end. We prefer owning 30Oct SPY/QQQ gamma for exposure to earnings without midterm premium + still capturing the Fed and 65% of S&P market cap reports. The S&P implied move for tomorrow went out at 34bps. 衍生品：由于固定收益市场因假日休市，波动率交易台交投清淡。尽管本周有多项催化因素，例如财报季启动、周三公布 CPI，以及多位美联储官员发表讲话，但上周五收盘时，标普 500 指数截至周五收盘的隐含波动幅度为 1%（截至今天早上约为 96 个基点）。这是过去 ~6 年中最低的 1 周隐含波动幅度之一。从资金流来看，鉴于债券市场休市，我们看到客户转而买入 HYG 下行保护……市场买入了 5 万份 1 月到期、行权价为 77/73 的看跌期权价差（今日期权总成交量接近 30 万份）。随着我们持续看到市场缺乏信心、情绪低迷且市场广度狭窄，交易台认为月末前做多标普 500 指数的上行敞口成本较低。我们倾向于买入 10 月 30 日到期的 SPY/QQQ Gamma，以在不承担中期选举溢价的情况下获得财报季敞口，同时仍可捕捉美联储相关行情及标普 500 指数中 65% 市值公司的财报影响。明日标普 500 指数的隐含波动幅度收于 34 个基点。（感谢 Shayna Peart）
