US EQUITIES COLOR: UGLY 美国股票市场综述：表现糟糕

15 October 2026 | 4:37 AM China Standard Time Share PDF

S&P -111bps closing @ 7,719 w/ a MOC of $2.6Bn to BUY. NDX -202bps @ 29,950, R2K -193bps 2,729, and Dow -9bps @ 51,622. 17.9n shares traded across all US equity exchanges vs ytd daily avg of 18.558bn shares. VIX +1009bps @ 16.81, WTI Crude +112bps @ $95.19, US 10YR -1bp @ 5.19%, gold -142bps @ 4,101, dxy +35bps @ 102.54 and Bitcoin -185bps @ $81,794

标普 500 指数下跌 111 个基点，收于 7,719 点；收盘竞价（MOC）净买入 26 亿美元。纳斯达克 100 指数下跌 202 个基点，报 29,950 点；罗素 2000 指数下跌 193 个基点，报 2,729 点；道琼斯工业平均指数下跌 9 个基点，报 51,622 点。美国各股票交易所成交量合计 179 亿股，而年初至今日均成交量为 185.58 亿股。VIX 上涨 1,009 个基点，报 16.81；WTI 原油上涨 112 个基点，报 95.19 美元；美国 10 年期国债收益率下跌 1 个基点，至 5.19%；黄金下跌 142 个基点，报 4,101；美元指数（DXY）上涨 35 个基点，报 102.54；比特币下跌 185 个基点，报 81,794 美元。

First -1% SPX / -2% NDX move since late July. Ugly session with sentiment particularly within the AI complex taking a real step function lower on a combination of 1) heavy focus on what the credit markets are saying about the ability to continue to finance the AI trade and 2) acute focus on neoclouds (-12% today which is a top 5 move in past 5 years) / hyperscale bond yields onto a growing list of recent concerns (openAI revenue confusion, China Memory breakthroughs easing bottlenecks, datacenter sentiment into midterms, future power/shell constraints, further issuance etc) ... all on the heels of hotter than anticipated CPI this AM (core 33bps vs cons 20bps, upside surprise from firmer shelter categories).

这是自 7 月下旬以来，标普 500 指数首次下跌 1%、纳斯达克 100 指数首次下跌 2%。盘面表现疲弱，市场情绪明显转差，尤其是 AI 板块，因以下因素而大幅走低：1）市场高度关注信贷市场所反映的 AI 交易能否继续获得融资；2）市场对云端新兴服务商（neoclouds）的关注骤然升温（该板块今日下跌 12%，为过去 5 年中跌幅最大的五个单日表现之一），同时也关注超大规模云服务商的债券收益率。在此之前，市场近来已忧虑不断，包括 OpenAI 营收情况不明、中国存储技术突破有望缓解瓶颈、美国中期选举前数据中心板块情绪、未来电力及供应限制，以及更多债券发行等……此外，今早公布的 CPI 高于预期（核心 CPI 上涨 33 个基点，市场共识为 20 个基点；超预期主要源于住房类别价格更为坚挺），进一步加剧了压力。

Given the starting point of front-end pricing significantly compressed from the highs it's not surprising to see the market rebuild some near-term hike risk, mkt now pricing hike probability odds: 35% Oct and 87% December. GIR continues to expect that the Fed will deliver a second hike in December, and looks to tomorrow's PPI report + Warsh's speech in Bangkok for soundbites.

鉴于短端利率定价此前已较峰值大幅回落，市场重新计入部分近期加息风险并不意外。目前市场定价显示，加息概率为：10 月 35%，12 月 87%。GIR 仍预计美联储将在 12 月再次加息，并将关注明日公布的 PPI 报告，以及沃什在曼谷的讲话，寻找相关表态。

Our floor was a 4 on a 1-10 scale in terms of overall activity levels, finishing 7% better for sale. Single stock activity on our desk still relatively quiet through incomings rapidly picking up. Asset Mgrs and HFs finished net sellers driven by overlapping supply in tech and macro expressions (our info tech sell skew hit the highest in > 4 weeks, driven by LO supply + HF long & short supply). ETF volumes accelerated volumes (most major index ETF volumes were tracking +40-60%) suggestive of heavy top-down selling.

我们的活动水平底线为 1 至 10 分中的 4 分；按销售额计算，最终高出 7%。我们交易台的个股交易活动仍相对清淡，但新业务流入迅速增加。资产管理公司和对冲基金最终均为净卖方，主要受科技股和宏观策略相关供应重叠的推动（我们信息技术板块的卖出倾向达到逾 4 周以来最高水平，原因是长线资金供应增加，加上对冲基金多头和空头头寸均有供应）。ETF 成交量加速上升（多数主要指数 ETF 的成交量较均值高出 40%至 60%），显示自上而下的卖压沉重。

DERIVS: A hot CPI print catalyzed a broad index drawdown spearheaded by de-risking of the AI trade, though price action lacked a true capitulatory feel as we moved lower without genuine downside panic. The primary structural change of the session was a gradual steepening of the skew curve. While front-month NDX vol caught a mild bid, the SPX term structure held unchanged for most of the session, even as VIX closed just under 17. In summary, we continue to realize an inverted skew world where floating strike vols attempt to remain somewhat constant regardless of where spot goes. It feels much more like the market is cutting the right tail off of the AI trade as opposed to any degree of panic on the downside. Flows were fairly quiet but tilted towards hedging as we saw several buyers in SPX Dec downside and VIX upside. The desk still views outright vol as fundamentally too cheap. After realizing over 2x the overnight implied move heading into the session, the rest-of-week straddle is marked at 84bps. (TY Shayna Peart)

衍生品：高于预期的 CPI 数据引发主要股指普遍回落，人工智能交易的去风险化成为主因；不过，随着市场走低，价格走势并未显现真正的投降式抛售特征，也没有出现明显的下行恐慌。本交易时段最主要的结构性变化是偏斜曲线逐步变陡。尽管近月纳斯达克 100 指数波动率略有走高，但标普 500 指数波动率期限结构在本交易时段大部分时间保持不变，VIX 收于略低于 17 的水平。总的来说，偏斜仍处于倒挂状态，即无论现货价格如何变动，浮动行权价波动率都试图维持在相对稳定的水平。市场表现更像是在削减人工智能交易的上行尾部风险，而非出现任何程度的下行恐慌。资金流总体较为平静，但倾向于对冲；我们观察到多笔买入标普 500 指数 12 月到期下行风险敞口和 VIX 上行敞口的交易。交易台仍认为，单纯波动率从基本面看过于便宜。本交易时段开始前，实际波动幅度已超过隔夜隐含波动幅度的 2 倍；本周剩余时间的跨式期权定价为 84 个基点。（TY Shayna Peart）
