A Floor, Not a Fix

Beijing's targeted package for "Six Networks" financing offers a modest 4Q growth cushion but likely won't break the deleveraging trap. Strong exports let policymakers defend the growth floor without a demand-side pivot, while local debt, housing and weak consumer confidence should drag into 2027.

Key Takeaways

- Sep-Oct easing should support 4Q26 GDP of 4.4-4.5%Y, vs. 3Q's ~4.3%, led by narrower infrastructure FAI contraction.
- The infrastructure project pipeline is key to policy transmission. We see potential approvals for more offshore wind.
- The mortgage subsidy's narrow eligibility limits the boost to sales and transmission to new starts. Further easing could include a HPF loan rate cut.
- Despite current policy fine-tuning, household deleveraging and a sizable reduction in debt-swap relief could reignite growth pressures in 2027.
- Robust exports now allow rapid adjustments in debt-laden sectors; a slowdown could raise urgency for fiscal, debt resolution and social-welfare reforms.

The market broadly expects only modest easing for the remainder of 2026, despite sizable unused policy-financial tools, and is increasingly look ahead to 2027. We lay out a framework for tracking infrastructure financing transmission. We also assess offshore wind as a potential source of new infrastructure projects and why mortgage subsidies might have limited investment spillovers. Finally, we discuss potential policy catalysts seen for 2027 amid growing concerns over China–EU trade tensions.

Economics

Fine-tuning, not pivot

Why now? Growth is testing the annual target

Growth likely slowed toward the lower end of the 4.5–5.0% target range in the first three quarters. Real GDP growth decelerated to 4.3% YoY in 2Q26, and we estimate a similar pace in 3Q26, with further weakening in sequential momentum led by services. Domestic demand remains under pressure from accelerating household deleveraging, weakening investment and sluggish fiscal execution. Households are prioritizing debt repayment and precautionary savings over consumption, while the property downturn and constrained local-government finances continue to weigh on investment. Meanwhile, the heightened emphasis on local debt resolution has contributed to slow fiscal and quasi-fiscal deployment, reinforcing rather than offsetting the weakness in private demand.

Targeted easing should support a modest growth rebound in 4Q26. The Rmb250bn additional special-bond allocation, faster deployment policy-banking tools, cheaper PSL funding, and new project approvals should provide some support to infrastructure investment. We expect monthly infrastructure FAI growth to rebound modestly on a YoY basis in 4Q (vs. -14%Y in 3Q26), helping stabilize cumulative YTD growth. Headline TSF YoY might stabilize toward year-end with some crowd-in of corporate medium/long-term lending. Overall, we expect real GDP growth to recover modestly from 4.3% YoY in 3Q to around 4.4-4.5%Y in 4Q26, and maintain full-year growth at ~4.5%.

Sep-Oct 2026 Policy Fine-tuning at a Glance

EASING TYPE	ACTUAL MEASURE	OUR TAKE
Quasi-fiscal	25bp **PSL rate cut** to 1.5%, with eligibility expanded to the six networks.	**Marginal funding relief for policy banks.** Cheaper financing supports strategic infrastructure, but viable projects remain the key constraint.
Quasi-fiscal	Rmb700bn PBoC **re-lending quota** increase, including Rmb200bn for technology/equipment and Rmb500bn for agriculture/SMEs. Funding ratio for technology/equipment raised from 60% to 100%.	**Targeted credit support.** Improves banks' incentives to finance priority sectors, but unlikely to generate broad credit expansion.
Quasi-fiscal	Accelerated implementation of the previously announced Rmb800bn **policy-banking tools for infrastructure.**	Implementation will likely speed up amid synergies from incremental easing elsewhere, such as PSL rate cut and eligibility expansion, and/or more project approvals (such as **offshore wind power**).
Housing	**First centrally funded mortgage subsidy**, with an estimated fiscal cost of Rmb15–20bn/year.	**Signaling effect outweighs stimulus.** The move demonstrates willingness to deploy central fiscal resources to support household balance sheets, but the current design points to limited impact on the housing market.

知识星球：前沿信息收录
更多一手投研资料扫码加微信

知识星球：前沿信息收录
VX:FCCNN88

Fiscal	**Previously unused statutory debt headroom activated:** Rmb300bn in additional general bonds to support county-level fiscal capacity; Rmb250bn in special bonds for infrastructure investment, prioritizing ongoing projects and the six networks.	**A tangible fiscal cushion**, echoing recent State Council directive to "make effective use of unused local-government debt quota." Compared with 2025, the expansion is slightly larger (by Rmb50bn), while more flexibility is granted to local governments this year: unlike last year, the usage of Rmb300bn in general bond quota was not restricted to debt resolution.

Why not more? Export resilience and a tech-first policy framework

Beijing remains committed to shifting toward a tech-first growth model. Since 2021, policymakers have been actively steering the economy away from property- and debt-driven expansion toward technological self-reliance, advanced manufacturing and energy security. The 15th Five-Year Plan reinforces these priorities. Meanwhile, the economy's resilience to US tariffs and the energy shock appears to have strengthened Beijing's conviction in this policy direction, reducing the perceived urgency for broad demand stimulus. Although the plan also emphasizes raising consumption's share of GDP, the separate 2030 retail-sales target implies just 3.7% annual growth, broadly in line with the recent trend. In our view, Beijing continues to see consumption rebalancing as a gradual outcome of industrial upgrading and employment growth, rather than a near-term priority warranting large-scale fiscal transfers to households.

Export resilience gives Beijing greater room to tolerate slower growth in traditional sectors. Recent communications from Beijing characterized 1H26's 4.7% GDP growth as broadly consistent with China's potential and explicitly acknowledged the near-term growth costs of resolving property and local-government debt risks (see China Musings: A 2021 Deja Vu? Different Tightening, Same Deflationary Pressure, 3 Sep 2026). Meanwhile, China's exposure to the global AI capex boom and broader Asian industrial investment cycle continues to underpin exports and headline growth. This external strength reduces the urgency to offset weakness in property, construction and other traditional sectors through broad stimulus. However, the increasingly capital-intensive nature of export growth limits spillovers to employment and household income, allowing the two-speed economy to persist: moderate headline growth alongside weak domestic demand.

Comparing Sep-2024 Policy Pivot and 2026 Policy Fine-tuning

	9.24 2024 PIVOT	ONGOING FINE-TUNING
Trigger	Growth missed the annual target for two consecutive quarters, leaving YTD growth below target. Deflation pressures became pervasive. Local financing stress leading to revenue-driven enforcement.	Growth will likely miss the annual target for two consecutive quarters, but YTD growth should hover around the lower end of the annual target range. Inflation headlines have improved amid imported inflation pressures, though underlying momentum remains subdued.
Objective	Re-accelerate growth. Reset expectations and improve confidence.	Defend the growth floor.
Breadth	Coordinated monetary, property, fiscal and capital-market measures.	More targeted: infrastructure, selected credit channels and mortgage subsidy.
Fiscal impulse	Meaningful; augmented fiscal deficit widened by ~3pp of GDP from Aug-24 to mid-2025.	Modest: augmented fiscal deficit could stabilize and rebound by 0.5-1pp of GDP toward end-2026.

知识星球：前沿信息收录
VX:FCCNN88

Monetary policy	Broad easing: 20bp policy rates cut, 50bp RRR cut, ~50bp cut on existing mortgage rate.	Targeted: 25bp PSL rate cut; larger relending quotas on tech and SMEs.
Policy signal	Clear pivot: Beijing was no longer willing to tolerate a downward spiral in growth, inflation, confidence and asset prices.	Beijing is willing to cushion the slowdown, but is more tolerant of deleveraging and activity softness in certain sectors.

Is policy transmitting? Key signposts

The September fine-tuning should help cushion investment. We see a three-stage transmission mechanism: policy-banking tools close the project-capital gap; PSL and bank lending provide complementary financing; actual project execution translates funding into fixed-asset investment (FAI). The first stage is now underway, but evidence of the second and third stages remains limited so far. We expect more visible, albeit modest, improvement in FAI YoY growth in 4Q26, partly on a low base, concentrated in strategic infrastructure and industrial upgrading rather than a broad-based investment rebound.

How does the financing reach the real economy?

Policy-financial tools address the seed capital constraint. The Rmb800bn program for 2026, up from Rmb500bn in 2025, is primarily designed to supplement project capital. Policy-bank funds can invest directly as equity or extend shareholder loans through *entrusted-loan* arrangements.

PSL complements project-capital financing. The PBoC supplies relatively low-cost funding to policy banks, supporting both the implementation of policy-financial tools and associated project lending. The latest 25bp PSL rate cut to 1.5%, alongside expanded eligibility for the six networks, could therefore facilitate both capital deployment and subsequent investment financing.

Re-lending supports a separate, commercial-bank channel. The September package expanded technology/equipment re-lending by Rmb200bn and agriculture/SME re-lending by Rmb500bn. PBoC also raised the refinancing ratio for technology/equipment loans from 60% to 100%. These should improve commercial credit supply in targeted areas.

The 2022 precedent: Clear policy transmission

The capital-deployment channel worked quickly. NDRC disclosed that the 2022 policy-financial tools disbursed Rmb739.9bn, supporting more than 2,700 projects. The first Rmb300bn had been deployed by end-August, with additional tranches following. Entrusted-loan flows jumped to Rmb176bn in August and Rmb151bn in September, significantly higher than the pre-policy trend.

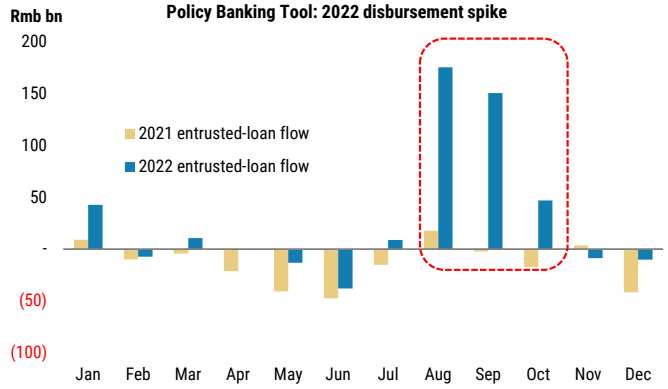

Second-stage financing impulse followed. Corporate medium/long-term lending strengthened from 11.9%Y in July 2022 and peaked at 18.2%Y in May 2023. PSL recorded Rmb630bn of net injections during September–November 2022.

Quasi-fiscal tools delivered a clear infrastructure investment boost. Infrastructure FAI accelerated from 9% YoY in 1H22 to 13% in 2H22, and remained elevated at 10% in 1H23. The pickup was led by utilities (16% in July to 34% in September) and transportation (2% to 13%), consistent with the tools' focus on energy and transport projects. Water conservancy/environment/public facilities lagged, as zero-COVID disruptions and strained

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

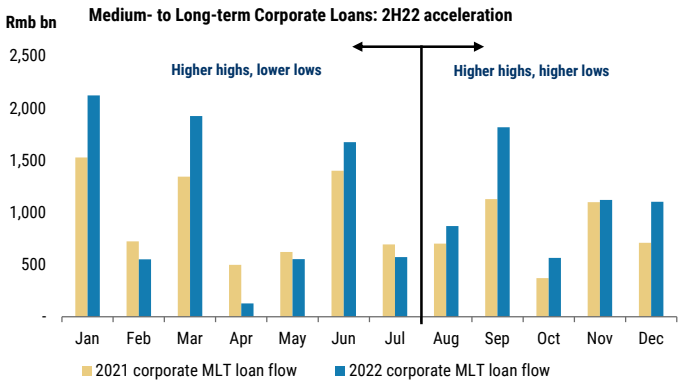

local-government revenues constrained project execution. Overall, the 2022 experience demonstrates effective transmission from quasi-fiscal financing to infrastructure investment.

Exhibit 1: During 2H22 infrastructure push, there was strong project-level capital injections initially...

Source: CEIC, Morgan Stanley Research

Exhibit 2: ... followed by stronger loan demand

Source: CEIC, Morgan Stanley Research

The 2026 rollout: modest capital deployment has begun

Initial signs of capital deployment - size not yet comparable with 2022. The three policy banks reported more than Rmb100bn of new policy-financial-tool disbursements since September, supporting around 400 projects. This is a welcome operational step-up after slow deployment YTD. Entrusted loans increased only Rmb23bn in August (Rmb176bn in August 2022), though September data (to be released next week) could be more informative.

The project mix geared is towards emerging sectors. CDB disclosed that of the Rmb61bn September deployments, 74.5% went toward artificial intelligence, digital economy, biomedicine, consumption and green/low-carbon projects. This differs from the more conventional infrastructure emphasis in 2022. It suggests that even successful implementation may show up more in manufacturing capex rather than traditional transportation or municipal-investment series.

Can PSL and relending ease the transmission bottleneck?

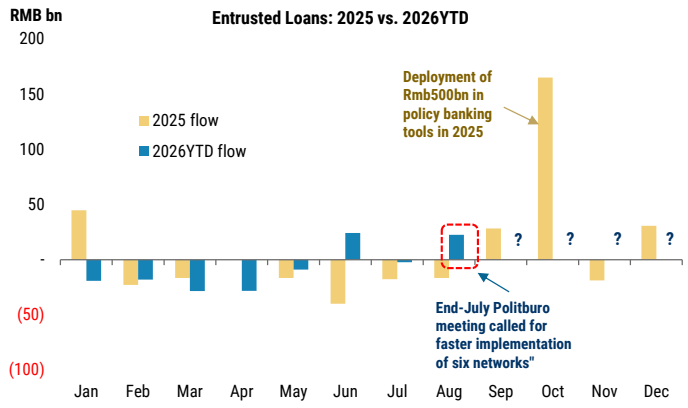

The PSL rate cut should provide a marginal boost, but is unlikely to be pivotal: The 25bp PSL rate cut and expanded eligibility for the "six networks" should complement the Rmb800bn quasi-fiscal tools by lowering policy-bank funding costs. However, historical experience suggests PSL usage is driven more by project availability than funding costs: despite January's rate cut, PSL remained largely on a downward trajectory up to August. The latest easing may facilitate financing for viable infrastructure projects, but is unlikely to unlock a meaningful investment impulse without a stronger pipeline of viable projects.

Re-lending provides targeted credit support, with a tilt toward technology. The PBoC expanded relending quotas by Rmb700bn, including Rmb200bn for technology innovation and equipment upgrades, while raising the funding ratio for the latter from 60% to 100%. This materially strengthens banks' incentives to lend to priority technology segments. Historical experience suggests that quota expansions have generated uneven and often delayed take-ups, particularly when credit demand is weak. The latest measures

知识星球：前沿信息收录
VX:FCCNN88

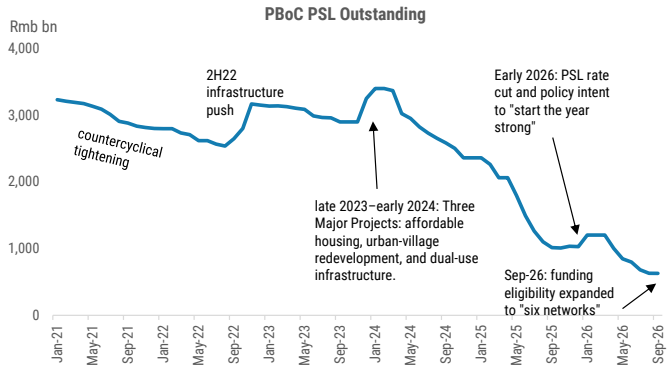

should help sustain tech-related lending and capex, but appear unlikely to generate a broad-based credit impulse.

Exhibit 3: Project-level capital injection appears quite modest so far

Source: CEIC, Morgan Stanley Research

Exhibit 4: PSL provides an additional gauge of implementation progress for the "six networks"

Source: CEIC, Morgan Stanley Research

What would confirm that policy is transmitting?

- **Capital funding deployment:** Official disbursements of policy-financial tools, TSF entrusted loans, policy-bank bond issuance and net PSL injections to track whether announced funding is reaching projects.
- **Credit crowd-in:** Corporate medium/long-term loans, policy-bank lending and matching commercial-bank loans to assess whether project-capital injections are mobilizing additional credit.
- **Investment execution:** Project starts and infrastructure FAI, particularly in power grids, water infrastructure, logistics and digital infrastructure, to assess whether financing is translating into actual investment.

A glimpse into 2027

Investors are increasingly looking beyond the recent fine-tuning to Beijing's policy stance in 2027. In our client conversations, a common view is that the September–October measures are insufficient to reverse the domestic slowdown, yet expectations for substantial additional stimulus before year-end remain limited. The debate is therefore shifting toward whether Beijing will recalibrate its fiscal stance and policy mix in 2027, particularly as existing debt-relief measures taper and the sustainability of export-led growth faces greater scrutiny.

Absent a deeper overhaul of policy mix, fine-tuning does not reverse the broader tightening

Several tightening forces remain intact. Tighter tax and social-security contribution enforcement can increase the effective burden on businesses and households when private demand is still weak. We estimate that tighter enforcement could amount to 1-2% of GDP in effective tax burden, annualized. Meanwhile, falling land-sale revenues - with a further meaningful contraction over 2027-28 - should continue to constrain local-

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

government spending, while household debt repayment and precautionary saving suppress consumption.

The next pressure point is 2027 local-government financing. The five-year Rmb10trn debt-swap program is heavily front-loaded, with Rmb2.8trn annually in 2024–26, falling to just Rmb800bn per year in 2027–28. This Rmb2trn annual reduction in refinancing relief could renew pressure on local-government liquidity, constrain arrears settlement and further weigh on fiscal spending amid persistently weak land-sale revenues. Although the step-down does not represent a direct cut in government expenditure, it risks exacerbating pro-cyclical fiscal tightening just as domestic demand remains fragile.

Exports and domestic reforms: A seesaw

China's post-housing transition has increasingly visible global spillovers, triggering reactions by major trading partners. As the property downturn weighs on domestic demand, manufacturing upgrading and capacity expansion have driven gains in export competitiveness and market share. However, the widening gap between domestic absorption and industrial supply has also contributed to a larger external surplus, intensifying competitive pressures on trading partners. Specifically, the EU has increasingly called for a rebalancing of trade with China.

Even negotiated adjustment to trade relations could still mean headwinds on China exports. For example, according to a 9 Oct 2026 report from The Guardian, the preliminary understanding on hybrid vehicles offers Europe a way to moderate import competition while its auto industry restructures, and gives China a path to preserve market access without triggering a broader tariff-retaliation cycle. Yet, avoiding escalation may still entail concessions: EU officials suggested that Chinese hybrid and plug-in hybrid exports could be over 50% below the projected no-policy-change trajectory over four years, although the final terms remain unsettled. If implemented, such restrictions could constrain China's auto export growth. More importantly, it may establish a precedent for addressing trade imbalances in other industries - including intermediate inputs, capital goods, and pharmaceutical - as China's global manufacturing footprint expands.

Rising constraints on exports could strengthen the case for domestic reforms. Export resilience has given Beijing room to maintain its tech-first policy framework despite weak domestic demand. But if external demand slows, the pressure to lift domestic growth could increase. In that scenario, though we recognize that Beijing may have become more cautious in using one-off stimulus to support growth, progress on key structure reforms could increase. We believe the following reforms would be required for China to reflate in a sustainable manner:

- **Debt resolution:** Use of central government deficit or PBoC credit tools to accelerate arrears clearance and pursue a more comprehensive restructuring of LGFV liabilities.
- **Fiscal reform:** Rebalance revenue-sharing and expenditure between central and local, and reduce local governments' dependence on land sales and production-oriented tax incentives.
- **Social welfare and household income:** Expand pension, healthcare, unemployment and childcare support, alongside hukou-related public-service reform, to lower precautionary savings and support consumption.

China Offshore Wind Enters a Deep & Far-Offshore Development Cycle

Eva Hou

China aims to promote the standardized and orderly development of offshore wind power, according to the 15th Five-Year Renewable Energy Plan. The Plan marks a strategic shift in offshore wind development from predominantly nearshore, project-by-project development toward large-scale deep and far-offshore wind bases. The government targets ~100GW of new offshore wind construction starts during 2026–30, with cumulative installed capacity exceeding 100GW by 2030. As end-2025, China's operational offshore wind installed capacity was 47GW.

- **Nearshore remains important, but deep and far-offshore will likely become the next growth pillar:** The government targets accelerating construction of provincial offshore wind power projects that have already received approval, and carrying out a new round of revisions and assessments of provincial offshore wind power plans.
- **Development model shifts from individual projects toward large-scale offshore wind bases:** The Plan calls for a national pipeline of deep and far-offshore wind bases across the Bohai Sea, Yellow Sea, East China Sea and South China Sea.
- **Grid connection becomes increasingly centralized and shared:** It also emphasizes coordinated generation and transmission planning, shared subsea transmission corridors and landfall infrastructure, as well as the longer-term development of integrated offshore energy hubs and energy islands.

China's offshore wind market to enter a stronger construction cycle from 2027

Offshore wind construction activity remained relatively subdued for the nine months ended September 2026, with only 2-3GW of new projects commencing construction, mainly including 1.2GW in Guangdong, 0.3GW in Jiangsu and 1.2GW in Hainan. One key factor was the delay in the Deep and Far-Offshore Wind Development Action Plan, which had initially been expected to be released alongside the 15th Five-Year Renewable Energy Development Plan in March 2026. The delayed rollout of the action plan has slowed the approval and construction schedule for a number of deep and far-offshore projects. We expect project approvals and construction starts to accelerate meaningfully thereafter, once the Action Plan is released, potentially in 4Q26.

The Deep and Far-Offshore Wind Development Action Plan, which has been under preparation for more than two years, is expected to establish a clearer development and approval framework for projects in centrally administered waters, addressing key bottlenecks including sea-use rights, project approvals, military clearance and cross-agency coordination.

We estimate annual new construction starts could exceed 20GW during 2027–30, a substantial increase from 5-8GW p.a. during 2022-25, supported by the rollout of deep and far-offshore wind bases as well as a new wave of provincial offshore wind projects.

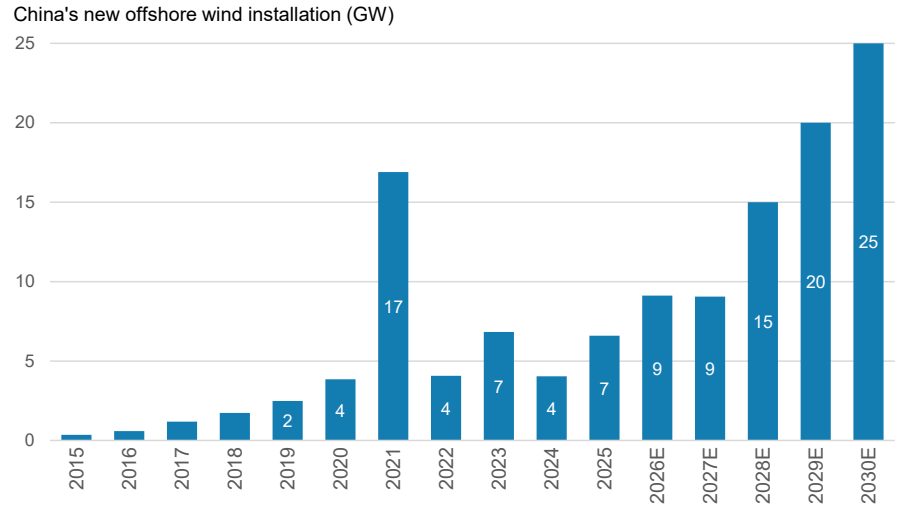

知识星球：前沿信息收录
更多一手投研资料扫码加微信

知识星球：前沿信息收录
VX:FCCNN88

This would imply more than 100GW of cumulative new offshore wind construction starts during the 15th Five-Year Plan period, broadly consistent with the national target of approximately 100GW of new offshore wind projects commencing construction during 2026–30.

We forecast China's offshore wind installation will increase to 15GW/20GW/25GW in 2028/29/30, respectively, from 9GW/9GW in 2026/27, benefiting from acceleration of approval and construction of large-scale deep and far-offshore wind bases. Our new installation forecasts for 2026 and 2027 are based on the under-construction project pipeline.

Exhibit 5: China's offshore wind new installation forecasts, 2026-30E

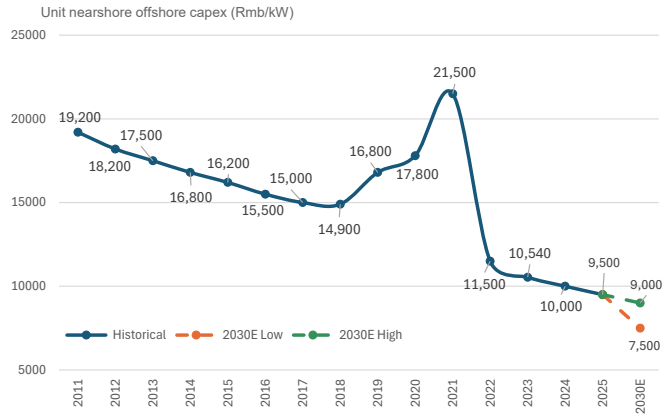

Source: NEA, Morgan Stanley Research; E = Morgan Stanley Research estimates

Deep and far-offshore wind investment: Cost reductions shifting from equipment-led to marine engineering- and system-led optimization

China's offshore wind sector, historically focused on nearshore projects, experienced substantial cost reductions during the 14th Five-Year Plan (2021–2025), driven by technological advancements, improved installation capabilities, larger wind turbines, and intensified supply chain competition. According to HydroChina, the scope for further cost reductions in nearshore offshore wind is becoming increasingly limited, with average capex expected to decline modestly from Rmb9,500/kW in 2025 to Rmb7,500–9,000/kW by 2030.

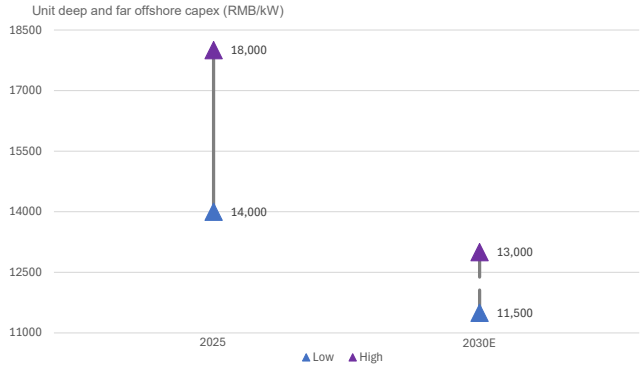

知识星球：前沿信息收录
VX:FCCNN88

Exhibit 6: Investment cost of nearshore offshore wind declined over the year

Source: Hydro China, Morgan Stanley Research; E=Hydro China forecast

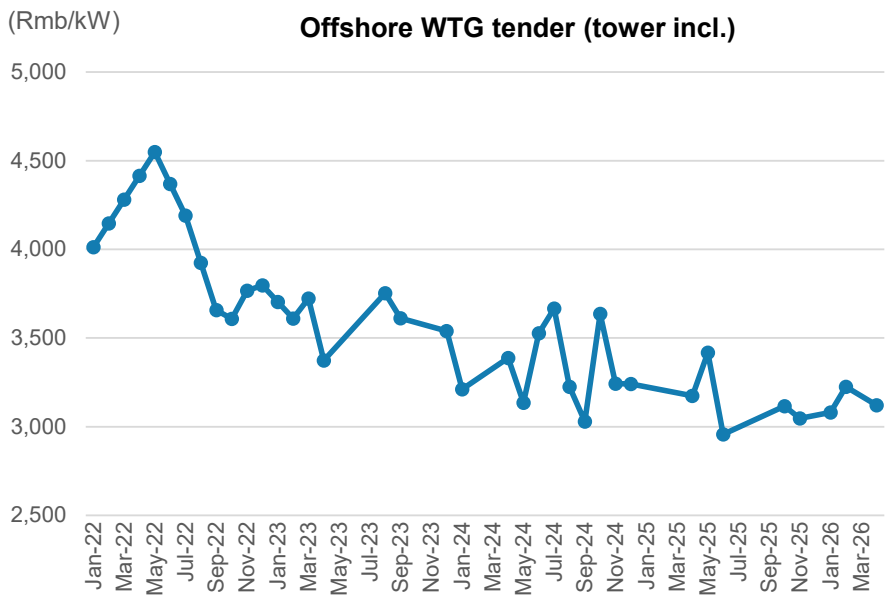

Exhibit 7: Higher investment cost of deep and far offshore wind, while anticipating decline during the 15th FYP

Source: Hydro China, Morgan Stanley Research; E=Hydro China forecast

Offshore wind turbine prices (including tower) were Rmb2,950–3,300/kW in 2025 vs. >Rmb7,000/kW in 2021 (Exhibit 4). As the marginal cost benefits of turbine upsizing diminish, construction efficiency and risk management are becoming increasingly important determinants of overall project economics.

Exhibit 8: We see limited downside for offshore wind turbine ASP

Source: CWEC, Morgan Stanley Research. Note: Offshore wind turbine ASP was >Rmb7,000/kW in 2021.

During the 15th Five-Year Plan (2026–30), **HydroChina expects China's offshore wind development to shift toward deeper waters and locations farther offshore, where project costs remain structurally higher.** According to HydroChina:

- Every additional 10km of offshore distance increases construction investment by 8–12% under nearshore AC transmission configurations.
- Meanwhile, as water depth increases from 15m to 45m, foundation and support structure costs rise substantially from approximately Rmb3,000/kW to

知识星球：前沿信息收录
更多一手投研资料扫码加微信

知识星球：前沿信息收录
VX:FCCNN88

Rmb7,000/kW.

Despite these challenges, HydroChina expects average capex for fixed-bottom deepwater and far-offshore wind projects to decline from Rmb14,000–18,000/kW in 2025 to Rmb11,500–13,000/kW by 2030, supported by advances in offshore construction, foundation design, installation efficiency, and transmission system optimization.

We expect cost optimization to increasingly shift from turbine price reductions toward foundation design, marine engineering, installation efficiency and transmission-system optimization, supporting the longer-term scalability of offshore wind development.

Exhibit 9: Offshore wind construction unit cost breakdown in China: Wind turbines cost dropped substantially while subsea cables, foundation and marine engineering increased

	2019			2025
	JIANGSU	GUANGDONG	FUJIAN	NATIONAL AVERAGE
Investment cost (Rmb/kW)	14,400-16,300	16,200-17,600	17,300-18,500	9,500
Breakdown (%)				
Wind turbine (Incl. installation)	48%	43%	45%	30%
Wind tower	4%	4%	5%	5%

VX:FCCNN88

Mortgage Subsidy - Modest Sales Support, Limited Investment Spillover

Stephen Cheung

We expect the mortgage subsidy to provide only marginal support to home sales, with a still weaker transmission into new construction and real estate investment. Narrow eligibility, the availability of cheaper Housing Provident Fund (HPF) financing and concerns over further home-price declines limit the scope for substantial incremental demand. We think the policy is more likely to bring forward purchases already planned for the next 1-2 years and modestly incentivize buyers with limited access to HPF mortgages. The key distinction is between supporting housing transactions and restarting the property development cycle.

Modest transaction support, limited incremental investment

We think the potential beneficiary pool is relatively narrow and weighted toward secondary homes. The first-home requirement and property price/size caps (less than 120sqm and Rmb1.5mn) concentrate coverage in non-core Tier 2 locations and Tier 3/4 cities. Based on 2025 transaction volumes and an assumed 50% commercial-mortgage participation rate among qualifying first-home buyers, we estimate 2.1mn potentially eligible purchases, equivalent to 16% of total transactions. These comprise approximately 0.8mn new homes and 1.3mn secondary homes, representing 12% and 21% of their respective markets. Importantly, these figures measure potential coverage, not additional transactions generated by the policy.

Assuming an average property value of Rmb1.05mn and a 70% loan-to-value ratio, eligible mortgages would total approximately Rmb1.54trn. This implies annualized interest support of Rmb15.4bn on initial loan balances, with Rmb13.9bn funded by central government and Rmb1.5bn by local governments.

Exhibit 10: We estimate only 2.1mn purchases would qualify for the subsidy, equivalent to 16% of 2025 transactions

	New home	Existing home	Overall
Estimated total units sold in 2025 (mn units)	6.4	6.3	12.8
Share of qualified units (<120sqm GFA, <Rmb1.5mn value)	40.0%	60.0%	49.9%
Estimated qualified units sold in 2025 (mn units)	2.6	3.8	6.4
Share of first-home buyers among qualified units	60.0%	70.0%	66.0%
Qualified first homes (mn units)	1.5	2.7	4.2
Share of buyers opting for commercial mortgage	50.0%	50.0%	50.0%
Qualified first homes with commercial mortgage (mn units)	**0.8**	**1.3**	**2.1**
Average housing value in 2025 (Rmb mn)			1.05
Housing value of qualified first homes using commercial mortgages (Rmb bn)			2,205
Average LTV of commercial mortgage			70.0%
Qualified commercial mortgage loans (Rmb bn)			**1,544**
Mortgage subsidy			1.0%
Annualized subsidy on initial loan balances (Rmb bn)			**15.4**
- 90% funded by central government (Rmb bn)			*13.9*
- 10% funded by local government (Rmb bn)			*1.5*

Source: Morgan Stanley Research

更多一手投研资料扫码加微信

知识星球：前沿信息收录
VX:FCCNN88

However, the estimated financing support should not be confused with an investment injection. In 4Q26, we expect the initial impact to be more visible in transactions than construction. Bringing forward planned purchases could support secondary-market turnover and selected developers' inventory clearance. Considering 63% of potential beneficiaries purchasing secondary homes, much of the activity would only involve transfers of existing housing rather than new development. We therefore see limited scope for an immediate investment response.

In 2027-28, any investment benefit could depend on sustained primary-market demand and developers' willingness to reinvest the resulting cash collections. Our inference is that a modest improvement in sales could help fund existing projects without triggering a broad recovery in new starts. Also, an initial one-year loan-origination window from October 2026 may trigger a timing risk of bringing forward purchases into 4Q26 or 1H27, potentially reducing demand later rather than raising cumulative sales materially, should the policy discontinue beyond the window.

Lower repayments help, but do not resolve the main barriers to buying

We see the most direct channel is lower near-term debt servicing for eligible commercial-mortgage borrowers. In our Rmb1mn, 30-year illustration, a 100bp subsidy reduces monthly installments by 12.3%, from Rmb4,248 to Rmb3,726 during the first five years. This can improve affordability for households whose purchase decisions are constrained by monthly repayments. However, lifetime interest savings across 15-30-year loans amount to only Rmb47-56k, or 3-4% of housing value at a 70% LTV. The financing benefit is therefore modest relative to the asset purchase, despite the larger percentage reduction in interest expenses. These calculations assume unchanged underlying rates and the report's repayment mechanics.

The incremental benefit is smaller for households that can already access sufficient HPF financing. At the current 2.6% HPF benchmark, subsidized commercial mortgages incur 7.4% more lifetime interest over 30 years and 1.5% more over 20 years. Only the 15-year illustration shows a commercial-mortgage advantage, with savings of 3.4%, or approximately Rmb7k. Although subsidized commercial loans offer lower initial repayments, borrowers cannot assume an automatic switch to HPF financing when the subsidy expires. We therefore expect the clearest incremental incentive among households with limited or no access to sufficient HPF funding, rather than across all eligible first-home buyers.

Moreover, in many targeted markets, the subsidy improves an existing interest-cost advantage rather than fundamentally changing purchase economics. In our 66-city sample, 31 had August 2026 rental yields above the 2.6% HPF benchmark; 13 also exceeded the 3.06% commercial mortgage benchmark. For households with access to the corresponding financing, the interest-cost comparison already favors ownership, before other ownership costs. Continued reluctance to buy therefore suggests that downpayment requirements, income uncertainty and home-price expectations may be more binding constraints. Lower mortgage rates address only part of that decision.

More importantly, capital-value risk can outweigh the financing relief. Among cities with rental yields above the HPF benchmark, 30 of 31 recorded home-price declines in

知识星球：前沿信息收录
VX:FCCNN88

both 2025 and 8M26; the corresponding figure above the commercial mortgage benchmark was 12 of 13. These observations do not establish individual buyers' motivations, but show that positive yield spreads have coexisted with price weakness. A further mid-single-digit decline could more than offset lifetime interest savings equivalent to 3-4% of property value, limiting the incentive for hesitant renters to enter the market.

A possible secondary transmission channel is the release of housing equity for subsequent purchases. An eligible first-time buyer's secondary-home purchase could enable the seller to upgrade, potentially supporting home sales beyond the directly eligible pool. However, its effectiveness largely depends on sellers recycling proceeds into another purchase, which would need a sustained improvement in household confidence on their income and home price outlook.

Exhibit 11: Mortgage subsidy reduces lifetime interest by 10-20%, but savings equate to only 3-4% of housing value; HPF mortgages retain a lifetime interest-cost advantage over 20-30 years

	Commercial Mortgage Interest (Rmb)			Monthly Installment - First 5 Years			Monthly Installment - Remaining		
Loan tenor	With subsidy	Without subsidy	Variance	With subsidy	Without subsidy	Variance	With subsidy	Without subsidy	Variance
30-year	473,882	529,449	-10.5%	3,726	4,248	-12.3%	4,168	4,248	-1.9%
20-year	287,824	338,254	-14.9%	5,087	5,576	-8.8%	5,459	5,576	-2.1%
15-year	201,580	248,248	-18.8%	6,463	6,935	-6.8%	6,782	6,935	-2.2%

	Total Mortgage Interest (Rmb)			Monthly Installment - First 5 Years			Monthly Installment - Remaining		
Loan tenor	Commercial	HPF	Variance	Commercial	HPF	Variance	Commercial	HPF	Variance
30-year	473,882	441,223	7.4%	3,726	4,003	-6.9%	4,168	4,003	4.1%
20-year	287,824	283,491	1.5%	5,087	5,348	-4.9%	5,459	5,348	2.1%
15-year	201,580	208,712	-3.4%	6,463	6,715	-3.8%	6,782	6,715	1.0%

Note: Assumes a Rmb1mn loan with equal monthly installments, an effective commercial mortgage rate of 2.06% for the first five years and 3.06% thereafter, with installments recalculated upon subsidy expiry. HPF financing assumes a 2.6% rate throughout. Underlying rates remain unchanged, with no early repayment. Lifetime interest figures are undiscounted. Source: Morgan Stanley Research.

Focus on sustained demand, pricing and reinvestment

We would prioritize three tests to distinguish a temporary transaction response from a broader improvement in fundamentals.

知识星球：前沿信息收录
VX:FCCNN88

Exhibit 14: Key signposts to watch for the impact of mortgage subsidy

Signpost	What to monitor	Implication for our thesis
1. Persistence and composition of the sales response	Completed transactions and mortgage disbursements in eligible price brackets and locations, split between new and secondary homes. Assess performance beyond the initial rollout and holiday period, allowing for seasonality and base effects.	A brief, secondary-led uplift would be consistent with purchases being brought forward. Sustained improvement into 2027, extending to larger-value primary sales, would suggest a stronger demand response. Higher commercial-mortgage usage alone could reflect substitution from HPF rather than additional purchases.
2. Prices and inventory absorption	Like-for-like transaction prices, the breadth of listing-price reductions and sales relative to available inventory in non-core Tier 2 and lower-tier markets.	Higher volumes accompanied by continued price cuts would remain consistent with our cautious view. Sustained inventory absorption without deeper discounts would provide stronger evidence that underlying demand is improving.
3. Sales-to-investment transmission	Developers' sales and their subsequent deployment into new construction, assessed alongside land replenishment and new starts.	Better sales without a construction response would confirm limited investment transmission. A broader recovery would require sustained primary sales, stronger cash generation and evidence that developers are reinvesting rather than primarily reducing liabilities.

Source: Morgan Stanley Research

Secondary brokerage has the more direct operating exposure under this transmission framework. Given the estimated 63% secondary-home share of potential beneficiaries, these businesses could benefit from higher turnover even without a recovery in new construction. As a further analytical implication, renovation and home-furnishing demand could receive second-round support where transactions lead to actual household spending. However, transaction growth need not translate proportionately into revenue or earnings if property values or spending per household decline. Businesses reliant on new starts and construction volumes would require evidence of the third transmission channel before a stronger operating outlook is warranted.

For developers, direct exposure should be assessed at the project level rather than inferred from broad city-tier exposure alone. The relevant considerations are the proportion of saleable resources within the price/size limits and first-home buyer exposure. Geographic eligibility can support sales, but does not establish the magnitude of incremental demand. Considering the majority of the developers under our coverage have highly focused on Tier 1 and top-Tier 2 cities, we think they could modestly benefit from the policy alone. Our existing stock preferences therefore remain selective and grounded in credible self-help initiatives - CR Land (1109.HK) and Seazen A/H (601155.SS/1030.HK) - rather than a broad-based mortgage-subsidy recovery thesis.

The central investment conclusion is unchanged: Stronger housing turnover would be an encouraging first step, but not sufficient evidence of a recovery in the property development cycle. The more consequential signals would be sustained primary-market demand, improved pricing and a demonstrable recovery in developers' capacity and willingness to invest.

Valuation Methodology and Risks

Seazen Group Ltd (1030.HK)

Our HK$3.83/share 2026e NAV comprises HK$3.38 of development properties (DCF, 8.9% WACC), HK$8.31 of investment properties (cap rate 6-9%) and HK$7.86 of net debt. To this we apply a 40% discount based on our developers' scorecard, comprising landbank (with a 5/10 score), execution (7), scale (6), growth (5), profitability (6), financing (7) and leverage (7). We use 30-45% discounts in our coverage.

Risks to Upside

- Stronger-than-expected contracted sales
- Stronger-than-expected new IP launches and IP operation
- Faster-than-expected land acquisition

Risks to Downside

- Weaker-than-expected contracted sales growth
- Faster-than-expected margin compression
- Weaker rental growth

China Resources Land Ltd. (1109.HK)

Our HK$59.88/share 2026e NAV comprises HK$24.02 of development properties (DCF, 8.0% WACC), HK$56.08 of investment properties (cap rate 5-8%) and HK$20.22 of net debt. To this we apply a 30% discount based on our developers' scorecard, comprising landbank (with a 8/10 score), execution (8), scale (9), growth (8), profitability (8), financing (10) and leverage (10). We use 30-45% discounts in our coverage.

Risks to Upside

- Stronger-than-expected contracted sales.
- Accelerated openings of new malls.

Risks to Downside

- Weaker-than-expected contracted sales.
- Slower-than-expected openings of new shopping malls.

Seazen Holdings Company Ltd. (601155.SS)

Our Rmb29.34/share 2026e NAV comprises Rmb13.81 of development properties (DCF, 8.9% WACC), Rmb36.15 of investment properties (cap rate 6-8%) and Rmb20.62 of net debt. To this we apply a 40% discount based on our developers' scorecard, comprising landbank (with a 5/10 score), execution (7), scale (6), growth (5), profitability (6), financing (7), and leverage (7). We use 30-45% discounts in our coverage.

Risks to Upside

- Stronger-than-expected contract sales
- Stronger-than-expected new IP launching and IP operation
- Faster-than-expected land acquisition

知识星球：前沿信息收录
VX:FCCNN88

Risks to Downside

- Faster-than-expected compression of development margin
- Weaker-than-expected growth of recurring income
- Slower-than-expected divestment of shopping malls into private REITs

Important Regulatory Disclosures on Subject Companies

In the next 3 months, Morgan Stanley expects to receive or intends to seek compensation for investment banking services from China Jinmao Holdings Group Ltd, China Overseas Land & Investment Ltd., China Resources Land Ltd., China Vanke Company Ltd., Longfor Group Holdings Ltd., Yuexiu Property Co Ltd.

Within the last 12 months, Morgan Stanley has received compensation for products and services other than investment banking services from China Jinmao Holdings Group Ltd, Greentown China Holdings, Longfor Group Holdings Ltd..

Within the last 12 months, Morgan Stanley has provided or is providing investment banking services to, or has an investment banking client relationship with, the following company: China Jinmao Holdings Group Ltd, China Overseas Land & Investment Ltd., China Resources Land Ltd., China Vanke Company Ltd., Longfor Group Holdings Ltd., Yuexiu Property Co Ltd.

Within the last 12 months, Morgan Stanley has either provided or is providing non-investment banking, securities-related services to and/or in the past has entered into an agreement to provide services or has a client relationship with the following company: China Jinmao Holdings Group Ltd, China Resources Land Ltd., China Vanke Company Ltd., Greentown China Holdings, Longfor Group Holdings Ltd..

The equity research analysts or strategists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality of research, investor client feedback, stock picking, competitive factors, firm revenues and overall investment banking revenues. Equity Research analysts' or strategists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

Morgan Stanley and its affiliates do business that relates to companies/instruments covered in Morgan Stanley Research, including market making, providing liquidity, fund management, commercial banking, extension of credit, investment services and investment banking. Morgan Stanley sells to and buys from customers the securities/instruments of companies covered in Morgan Stanley Research on a principal basis. Morgan Stanley may have a position in the debt of the Company or instruments discussed in this report. Morgan Stanley trades or may trade as principal in the debt securities (or in related derivatives) that are the subject of the debt research report.

Certain disclosures listed above are also for compliance with applicable regulations in non-US jurisdictions.

STOCK RATINGS

Morgan Stanley uses a relative rating system using terms such as Overweight, Equal-weight, Not-Rated or Underweight (see definitions below). Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.

Global Stock Ratings Distribution

(as of September 30, 2026)

The Stock Ratings described below apply to Morgan Stanley's Fundamental Equity Research and do not apply to Debt Research produced by the Firm.

For disclosure purposes only (in accordance with FINRA requirements), we include the category headings of Buy, Hold, and Sell alongside our ratings of Overweight, Equal-weight, Not-Rated and Underweight. Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold, and sell but represent recommended relative weightings (see definitions below). To satisfy regulatory requirements, we correspond Overweight, our most positive stock rating, with a

知识星球：前沿信息收录
VX:FCCNN88

buy recommendation; we correspond Equal-weight and Not-Rated to hold and Underweight to sell recommendations, respectively.

	Coverage Universe		Investment Banking Clients (IBC)			Other Material Investment Services Clients (MISC)	
Stock Rating Category	Count	% of Total	Count	% of Total IBC	% of Rating Category	Count	% of Total Other MISC
Overweight/Buy	1599	43%	455	48%	28%	783	44%
Equal-weight/Hold	1563	42%	394	42%	25%	763	43%
Not-Rated/Hold	2	0%	1	0%	50%	1	0%
Underweight/Sell	570	15%	96	10%	17%	227	13%
Total	3,734		946			1774	

Data include common stock and ADRs currently assigned ratings. Investment Banking Clients are companies from whom Morgan Stanley received investment banking compensation in the last 12 months. Due to rounding off of decimals, the percentages provided in the "% of total" column may not add up to exactly 100 percent.

Analyst Stock Ratings

Overweight (O). The stock's total return is expected to exceed the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Equal-weight (E). The stock's total return is expected to be in line with the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Not-Rated (NR). Currently the analyst does not have adequate conviction about the stock's total return relative to the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Underweight (U). The stock's total return is expected to be below the average total return of the analyst's industry (or industry team's) coverage universe, on a risk-adjusted basis, over the next 12-18 months.

Unless otherwise specified, the time frame for price targets included in Morgan Stanley Research is 12 to 18 months.

Important Disclosures for Morgan Stanley Smith Barney LLC Customers

Important disclosures regarding any material conflict of interest that can reasonably be expected to have influenced Morgan Stanley Smith Barney LLC's choice of a third-party research provider or the subject company of a third-party research report, are available on the Morgan Stanley Wealth Management disclosure website at www.morganstanley.com/online/ res.

For Morgan Stanley specific disclosures, you may refer to https://www.morganstanley.com/eqr/disclosures/webapp/generalresearch.

Each Morgan Stanley research report is reviewed and approved on behalf of Morgan Stanley Smith Barney LLC. This review and approval is conducted by the same person who reviews the research report on behalf of Morgan Stanley. This could create a conflict of interest.

Other Important Disclosures

Morgan Stanley Research policy is to update research reports as and when the Research Analyst and Research Management deem appropriate, based on developments with the issuer, the sector, or the market that may have a material impact on the research views or opinions stated therein. In addition, certain Research publications are intended to be updated on a regular periodic basis (weekly/monthly/quarterly/annual) and will ordinarily be updated with that frequency, unless the Research Analyst and Research Management determine that a different publication schedule is appropriate based on current conditions.

Morgan Stanley is not acting as a municipal advisor and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Morgan Stanley produces an equity research product called a "Tactical Idea." Views contained in a "Tactical Idea" on a particular stock may be contrary to the recommendations or views expressed in research on the same stock. This may be the result of differing time horizons, methodologies, market events, or other factors. For all research available on a particular stock, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Morgan Stanley Research is provided to our clients through our proprietary research portal on Matrix and also distributed electronically by Morgan Stanley to clients. Certain, but not all, Morgan Stanley Research products are also made available to clients through third-party vendors or redistributed to clients through alternate electronic means as a convenience. For access to all available Morgan Stanley Research, please contact your sales representative or go to Matrix at http://www.morganstanley.com/matrix.

Any access and/or use of Morgan Stanley Research is subject to Morgan Stanley's Terms of Use (http://www.morganstanley.com/terms.html). By accessing and/or using Morgan Stanley Research, you are indicating that you have read and agree to be bound by our Terms of Use (http://www.morganstanley.com/terms.html). In addition you consent to Morgan Stanley processing your personal data and using cookies in accordance with our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html), including for the purposes of setting your preferences and to collect readership data so that we can deliver better and more personalized service and products to you. To find out more information about how Morgan Stanley processes personal data, how we use cookies and how to reject cookies see our Privacy Policy and our Global Cookies Policy (http://www.morganstanley.com/privacy_pledge.html). Please use the provided link to review the Terms and Conditions and Most Important Terms and Conditions for Morgan Stanley India Company Private Limited (https://www.morganstanley.com/assets/pdfs/about-us-global-offices/india/Terms_and_conditions.pdf) and the following link to review the audit report (https://ny.matrix.ms.com/eqr/research/webapp/researchdocs/MSICPL_Morgan_Stanley_Research_Audit_Report.pdf).

ot agree to our Terms of Use and/or if you do not wish to provide your consent to Morgan Stanley processing your personal data or using cookies please do not access our research. anley Research does not provide individually tailored investment advice. Morgan Stanley Research has been prepared without regard to the circumstances and objectives of those

who receive it. Morgan Stanley recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a financial adviser. The appropriateness of an investment or strategy will depend on an investor's circumstances and objectives. The securities, instruments, or strategies discussed in Morgan Stanley Research may not be suitable for all investors, and certain investors may not be eligible to purchase or participate in some or all of them. Morgan Stanley Research is not an offer to buy or sell or the solicitation of an offer to buy or sell any security/instrument or to participate in any particular trading strategy. The value of and income from your investments may vary because of changes in interest rates, foreign exchange rates, default rates, prepayment rates, securities/instruments prices, market indexes, operational or financial conditions of companies or other factors. There may be time limitations on the exercise of options or other rights in securities/instruments transactions. Past performance is not necessarily a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. If provided, and unless otherwise stated, the closing price on the cover page is that of the primary exchange for the subject company's securities/instruments.

The fixed income research analysts, strategists or economists principally responsible for the preparation of Morgan Stanley Research have received compensation based upon various factors, including quality, accuracy and value of research, firm profitability or revenues (which include fixed income trading and capital markets profitability or revenues), client feedback and competitive factors. Fixed Income Research analysts', strategists' or economists' compensation is not linked to investment banking or capital markets transactions performed by Morgan Stanley or the profitability or revenues of particular trading desks.

The "Important Regulatory Disclosures on Subject Companies" section in Morgan Stanley Research lists all companies mentioned where Morgan Stanley owns 1% or more of a class of common equity securities of the companies. For all other companies mentioned in Morgan Stanley Research, Morgan Stanley may have an investment of less than 1% in securities/instruments or derivatives of securities/instruments of companies and may trade them in ways different from those discussed in Morgan Stanley Research. Employees of Morgan Stanley not involved in the preparation of Morgan Stanley Research may have investments in securities/instruments or derivatives of securities/instruments of companies mentioned and may trade them in ways different from those discussed in Morgan Stanley Research. Derivatives may be issued by Morgan Stanley or associated persons.

With the exception of information regarding Morgan Stanley, Morgan Stanley Research is based on public information. Morgan Stanley makes every effort to use reliable, comprehensive information, but we make no representation that it is accurate or complete. We have no obligation to tell you when opinions or information in Morgan Stanley Research change apart from when we intend to discontinue equity research coverage of a subject company. Facts and views presented in Morgan Stanley Research have not been reviewed by, and may not reflect information known to, professionals in other Morgan Stanley business areas, including investment banking personnel.

Morgan Stanley Research personnel may participate in company events such as site visits and are generally prohibited from accepting payment by the company of associated expenses unless pre-approved by authorized members of Research management.

Morgan Stanley may make investment decisions that are inconsistent with the recommendations or views in this report.

To our readers based in Taiwan or trading in Taiwan securities/instruments: Information on securities/instruments that trade in Taiwan is distributed by Morgan Stanley Taiwan Limited ("MSTL"). Such information is for your reference only. The reader should independently evaluate the investment risks and is solely responsible for their investment decisions. Morgan Stanley Research may not be distributed to the public media or quoted or used by the public media without the express written consent of Morgan Stanley. Any non-customer reader within the scope of Article 7-1 of the Taiwan Stock Exchange Recommendation Regulations accessing and/or receiving Morgan Stanley Research is not permitted to provide Morgan Stanley Research to any third party (including but not limited to related parties, affiliated companies and any other third parties) or engage in any activities regarding Morgan Stanley Research which may create or give the appearance of creating a conflict of interest. Information on securities/instruments that do not trade in Taiwan is for informational purposes only and is not to be construed as a recommendation or a solicitation to trade in such securities/instruments. MSTL may not execute transactions for clients in these securities/instruments.

Certain information in Morgan Stanley Research was sourced by employees of the Shanghai Representative Office of Morgan Stanley Asia Limited for the use of Morgan Stanley Asia Limited. Morgan Stanley is not incorporated under PRC law and the research in relation to this report is conducted outside the PRC. Morgan Stanley Research does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. Neither this report nor any part of it is intended as, or shall constitute, provision of any consultancy or advisory service of securities investment as defined under PRC law. Such information is provided for your reference only.
