A Year After Saying "Short Hyperscaler Bonds", Hartnett Now Says Buy Them

在曾称“超大型科技企业债券风险过高”一年后，哈特内特现在建议买入这类债券。

BY TYLER DURDEN

MONDAY, NOV 02, 2026 - 07:20 AM

Last weekend, BofA CIO Michael Hartnett told us that he would stay tactically risk-off until mid-November, and he named the three things that would end the selling. The third one read: ***"AI capex cut or extreme equity issuance announcement (think Boeing 2024) causes peak in AI hyperscaler debt spreads."***

上周末，美国银行首席信息官迈克尔·哈特内特表示，他会在 11 月中旬之前继续采取规避风险的策略。他还指出了三种可能促使人们停止抛售资产的情况。第三种情况是：“如果人工智能领域的资本支出减少，或者有大规模的股票发行计划出台（比如波音公司在 2024 年所做的那样），那么人工智能相关企业的债务利差就会达到峰值。”

Well, he didn't have to wait long.

嗯，他没等太久。

On Monday morning, Meta launched an equity raise of up to $95 billion: a $35 billion offering of common and mandatory convertible preferred stock, followed by an at-the-market program for up to $60 billion of non-voting Class C shares. The stock *rose*, which, as we said at the time, "*tells you how much the market feared the alternative was even more debt.*" We had one follow-up question:

周一上午，Meta 启动了规模高达 950 亿美元的融资计划：首先发行 350 亿美元的普通股及强制可转换优先股，随后还将通过市价发行方式筹集最多 600 亿美元的无投票权 C 类股票。该公司的股价随之上涨，正如我们当时所说，这“恰恰反映出市场有多么担心出现更多债务的情况”。我们还有一个后续问题：

Good for META. Now let's see everyone else's equity offering

对 META 来说不错。现在来看看其他公司的股权发行情况吧。

"Everyone else" answered over the next four days, just not the way we'd hoped:

在接下来的四天里，其他所有人都给出了答复，只是并非我们期望的那种方式：

- Microsoft, the cleanest balance sheet in the group, kicked off its first dollar bond deal since 2017 and asked for at least $25 billion;

  在该行业中资产负债表状况最为健康的微软，启动了自 2017 年以来的首笔美元债券发行计划，拟筹集的资金规模至少为 250 亿美元；

- Alphabet suffered the worst day in its history; and on Friday Intel crashed the most on record while Amazon slid on a $33.5 billion cash burn, sending the Nasdaq 100 down 3.5% to 28,385 and briefly into correction territory.

  Alphabet 遭遇了其历史上最糟糕的交易日；周五时英特尔的跌幅也创下了历史纪录，而亚马逊则因 335 亿美元的现金消耗问题股价下跌，导致纳斯达克 100 指数下跌 3.5%，降至 28,385 点，并一度进入调整区间。

- Hyperscalers as a group burned $31 billion in Q3, and the off-balance sheet time bomb inside AI hit $4.1 trillion, up $1 trillion in 90 days.

  第三季度，这些大型科技企业总共耗费了 310 亿美元，而与人工智能相关的表外风险则已高达 4.1 万亿美元，90 天内就增加了 1 万亿美元。

As for Hartnett's other call, that the Fed needed to hike on October 28, Warsh's Fed paused instead, with Cook and Hammack dissenting in favor of a hike. Through it all bonds kept rallying, and the 10Y closed the month at a six-week low below 4.9%.

至于哈特内特提出的另一项观点——即美联储应在 10 月 28 日上调利率——沃什则认为美联储应暂缓行动，而库克与哈马克则持不同意见，主张上调利率。尽管如此，债券市场依然持续上涨，10 年期国债的收益率在月底时降至 4.9%以下，创下了六周来的新低。

So did hyperscaler spreads peak? Not by a long shot: by Thursday IG spreads were blowing back out toward the recent wides, data center CDS was widening and Meta's Beignet SPV bonds were getting smashed. But Hartnett has seen enough to make a call that would have sounded crazy a year ago. Back in November 2025, he told clients that the best trade into 2026 was shorting hyperscaler bonds (which was about as close to perfect prediction accuracy as they come on Wall Street).

那些大型科技公司的债券利差是否已经达到峰值？远非如此：截至周四，投机级债券的利差又重新扩大到近期的高位，数据中心相关的 CDS 利差也在上升，而 Meta 的 Beignet SPV 债券则遭遇重创。不过哈特内特已经观察到了足够多的迹象，从而做出了在一年前还会被视为疯狂的决策。2025 年 11 月，他曾告诉客户，进入 2026 年的最佳投资策略就是做空这些大型科技公司的债券——这一预测的准确度在华尔街可谓极高。

So with US tech bonds down 9% YTD and their returns relative to the IG index at a 30-year low, he is now taking the other side: **buy the tech bond "diamonds in the rough."**

鉴于美国科技债券今年以来已下跌 9%，且其相对于投资级指数的收益水平处于 30 年来的最低点，他现在选择了相反的策略：买入这些堪称“未经雕琢的钻石”的科技债券。

In his latest Flow Show, titled "**When AI met ABB**" (*available to pro subs*); Hartnett starts with his weekly scoreboard. Oil extended its lead (79.1% YTD from 72.7% a week ago), US stocks clawed back almost a point (12.7% from 11.9%) and the dollar firmed (3.7% from 3.4%), while govt bonds (-3.3% from -3.0%) and IG (-2.5% from -2.2%) slipped again:

在其最新的《Flow Show》报告中，题为“当 AI 遇见 ABB”（专业订阅用户可阅）；哈特尼特首先给出了他的每周记分牌。石油扩大了领先优势（年初至今 79.1%，一周前为 72.7%），美国股市收复了近一个百分点（从 11.9%升至 12.7%），美元走强（从 3.4%升至 3.7%），而政府债券（从-3.0%降至-3.3%）和投资级债券（从-2.2%降至-2.5%）则再次下滑：

> **Scores on the Doors:** oil 79.1%, US stocks 12.7%, global stocks 9.6%, US$ 3.7%, cash 3.1%, HY bonds -0.5%, IG -2.5%, govt bonds -3.3%, gold -7.1%, bitcoin -8.4% YTD.
>
> 截至目前，各类资产的表现分别为：石油 79.1%、美国股票 12.7%、全球股票 9.6%、美元 3.7%、现金 3.1%、高收益债券-0.5%、投资级债券-2.5%、政府债券-3.3%、黄金-7.1%、比特币-8.4%。

Last week we noted that gold was just 0.2 points ahead of bitcoin in the race for last place. Well, the gap is now 1.3 points, and both scores predate the late-week fun: gold broke below $4,000 to a one-year low, while bitcoin hit a six-week low after North Korea was blamed for the $6.3 billion Binance heist. So much for the two debasement hedges in a year of record deficits. Keep in mind that these numbers run through Wednesday, i.e., before Alphabet, Intel and Amazon took turns detonating (**it's worse now**).

上周我们提到，在争夺最差表现的竞争中，黄金仅比比特币领先 0.2 点。如今这一差距已扩大到 1.3 点，而这些数据还是在本周后期那些动荡事件发生之前的情况：黄金价格跌破 4000 美元，创下一年新低；由于朝鲜被指涉嫌窃取币安 63 亿美元资金，比特币也跌至六周低点。在财政赤字创历史新高的这一年里，这两种资产本应作为抵御货币贬值的手段，但现在看来已毫无作用。需注意的是，这些数据统计的是截至周三的情况，也就是在谷歌、英特尔和亚马逊相继公布糟糕业绩之前——目前的状况已经更加糟糕了。

"Diamonds In The Rough": Hartnett Buys What He Told Us To Short

“未经雕琢的钻石”：哈特内特买入了他此前建议抛售的资产

Here is Hartnett's Biggest Picture, which is where this week's big call lives:

以下是哈特内特对整体局势的研判，也正是他本周给出买入建议的依据：

> **The Biggest Picture:** buy tech bond "diamonds in-rough"; **US tech bonds -9% YTD (relative return to IG bond index @ 30-year lows** - Chart 2) on AI hyperscaler debt issue surge to $182bn in '26 (vs. $17bn in '24); Mag7 bond yield attractive 6-8% (Table 1) as **META equity issuance signals new respect for credit investors** and AI bond vs. stock underperformance over... $89bn hyperscaler equity issuance in '26 means **era of big stock buybacks over** (running at $14bn YTD annualized vs $105bn '24 – Charts 4 & 5).
>
> 宏观全景：买入科技债券中的“璞玉”；美国科技债券年初至今下跌 9%（相对于投资级债券指数的相对回报处于 30 年低点——图表 2），原因是 AI 超大规模企业债券发行量在 2026 年激增至 1820 亿美元（2024 年为 170 亿美元）；Mag7 债券收益率具吸引力的 6-8%（表 1），因为 META 的股权发行表明对信贷投资者的新尊重，以及 AI 债券相对于股票表现不佳……2026 年超大规模企业股权发行达 890 亿美元，意味着大规模股票回购时代结束（年初至今年化运行率为 140 亿美元，而 2024 年为 1050 亿美元——图表 4 和 5）。

The chart says it all: the last time IG tech bonds lagged the IG index this badly was after the dot-com bust, when nobody wanted anything with a ".com" attached to its balance sheet:

图表已经说明了一切：上次投资级科技债券的表现比投资级指数落后得如此严重，是在互联网泡沫破裂之后，那时没人愿意在资产负债表上出现任何带有“.com”后缀的资产。

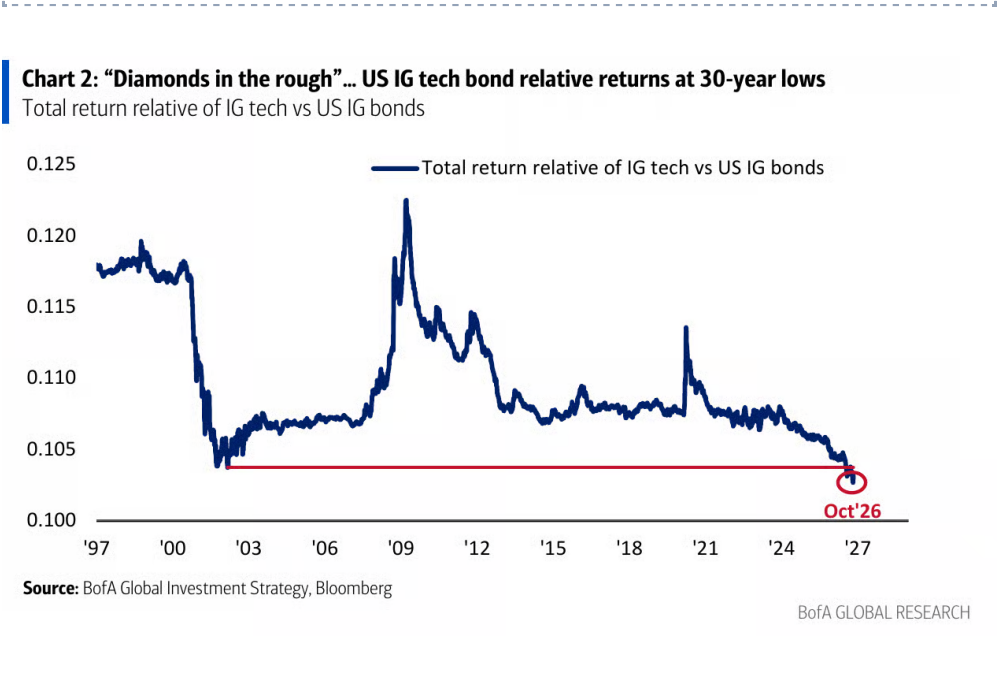

Chart 2: "Diamonds in the rough"... US IG tech bond relative returns at 30-year lows
Total return relative of IG tech vs US IG bonds

BofA GLOBAL RESEARCH

Having warned since October 2025 that AI is now a debt bubble too (well before Hartnett issued his "short AI debt" reco), quietly surpassing the banks as the largest sector in the IG market, we'll allow ourselves a modest victory lap: **hyperscaler debt issuance went from $17 billion in 2024 to $182 billion this year**, more than a tenfold increase, and the bond market has been repricing it ever since. That is what gets you to the yields in Hartnett's Table 1, where Meta's 2066s yield 7.40%, Oracle's 2066s 8.43% and CoreWeave's 2031s a junk-ish 14.26%. Even Microsoft and Apple's long bonds now pay north of 6%:

自 2025 年 10 月起，我们就警告称，AI 如今也成了一个债务泡沫（远早于哈特内特发出“做空 AI 债务”的建议），它悄然超越银行，成为投资级市场中最大的板块。现在我们可以 modestly 庆祝一下：超大规模企业的债务发行量从 2024 年的 170 亿美元增至今年的 1820 亿美元，增长超过十倍，而债券市场自那以来一直在对其重新定价。这正是哈特内特表 1 中收益率的由来：Meta 的 2066 年债券收益率为 7.40%，甲骨文的 2066 年债券为 8.43%，CoreWeave 的 2031 年债券则高达垃圾级的 14.26%。就连微软和苹果的长期债券如今收益率也超过 6%：

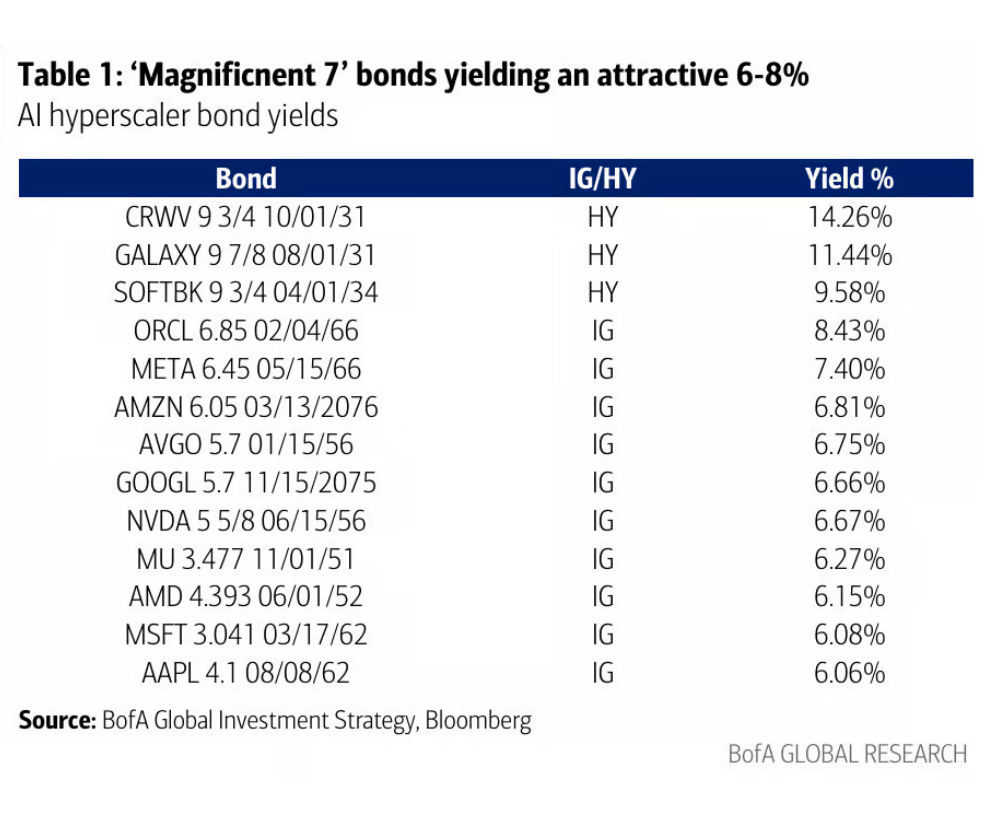

Table 1: 'Magnificnent 7' bonds yielding an attractive 6-8%
AI hyperscaler bond yields

Bond	IG/HY	Yield %
CRWV 9 3/4 10/01/31	HY	14.26%
GALAXY 9 7/8 08/01/31	HY	11.44%
SOFTBK 9 3/4 04/01/34	HY	9.58%
ORCL 6.85 02/04/66	IG	8.43%
META 6.45 05/15/66	IG	7.40%
AMZN 6.05 03/13/2076	IG	6.81%
AVGO 5.7 01/15/56	IG	6.75%
GOOGL 5.7 11/15/2075	IG	6.66%
NVDA 5 5/8 06/15/56	IG	6.67%
MU 3.477 11/01/51	IG	6.27%
AMD 4.393 06/01/52	IG	6.15%
MSFT 3.041 03/17/62	IG	6.08%
AAPL 4.1 08/08/62	IG	6.06%

Source: BofA Global Investment Strategy, Bloomberg

BofA GLOBAL RESEARCH

(Small quibble: half the names in BofA's "Magnificent 7" table **are not** in the Mag 7. CoreWeave, Galaxy, SoftBank, Oracle, Broadcom, Micron and AMD have all been promoted, which, given who has been doing the borrowing, is probably fair.)

（一个小问题：BofA 发布的“七大杰出企业”名单中有一半的公司其实并不属于这七家之列。CoreWeave、Galaxy、软银、甲骨文、博通、美光和 AMD 都已入选，考虑到这些公司的借贷情况，这样的排名似乎也合情合理。）

The other half of the story is equity. Add $89 billion in hyperscaler stock sales to the $182 billion in bonds and you get **$271 billion of new paper YTD**, with three of the four biggest quarters on record all coming this year:

另一个关键因素则是股票市场。将超大型科技公司的 890 亿美元股票抛售额与 1820 亿美元的债券抛售额相加，今年至今已有 2710 亿美元的资金流出市场，而历史上最严重的四个资金流出季度中有三个都出现在了今年。

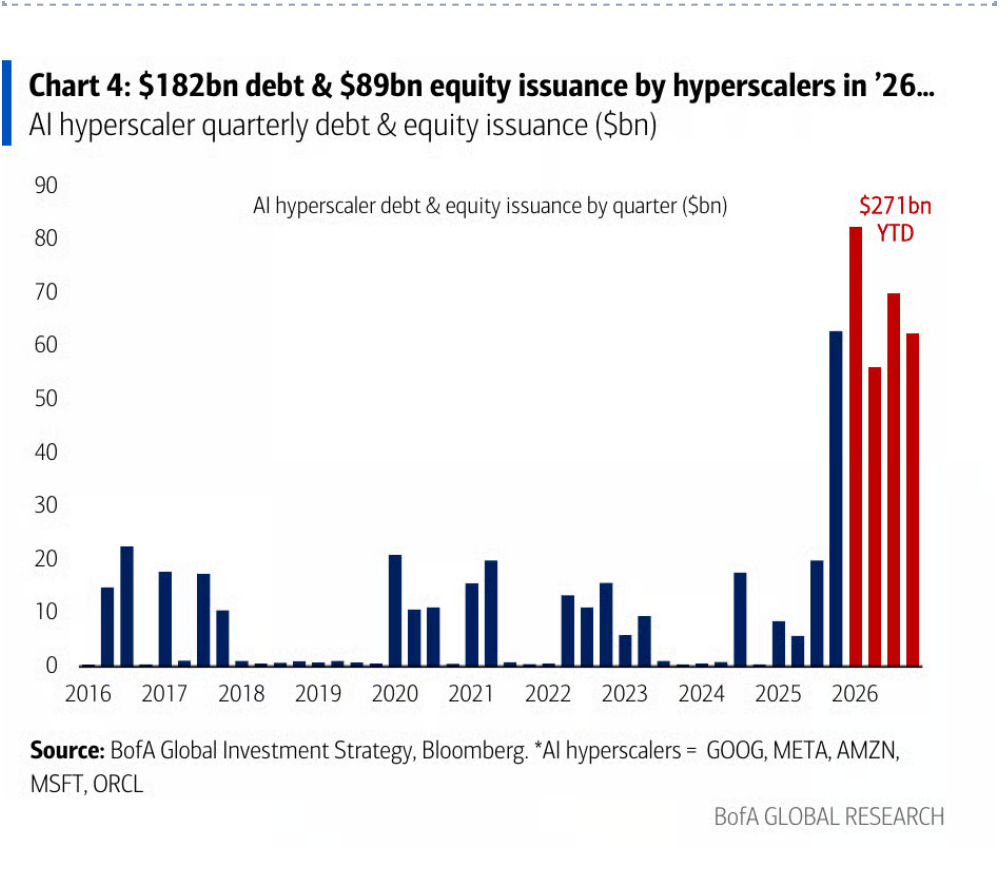

Chart 4: $182bn debt & $89bn equity issuance by hyperscalers in '26...
AI hyperscaler quarterly debt & equity issuance ($bn)

Source: BofA Global Investment Strategy, Bloomberg. *AI hyperscalers = GOOG, META, AMZN, MSFT, ORCL

BofA GLOBAL RESEARCH

And the money used to go the other way. Hyperscaler buybacks peaked at about $45 billion in a single quarter in late 2021, and ran at $105 billion for all of 2024. **This year they total $7 billion, or a $14 billion annualized pace:**

资金则流向了另一个方向。2021 年底，这些科技巨头的回购金额曾在单个季度内达到约 450 亿美元，而 2024 全年这一数字则为 1050 亿美元。今年它们的回购总额为 70 亿美元，按年化计算则为 140 亿美元。

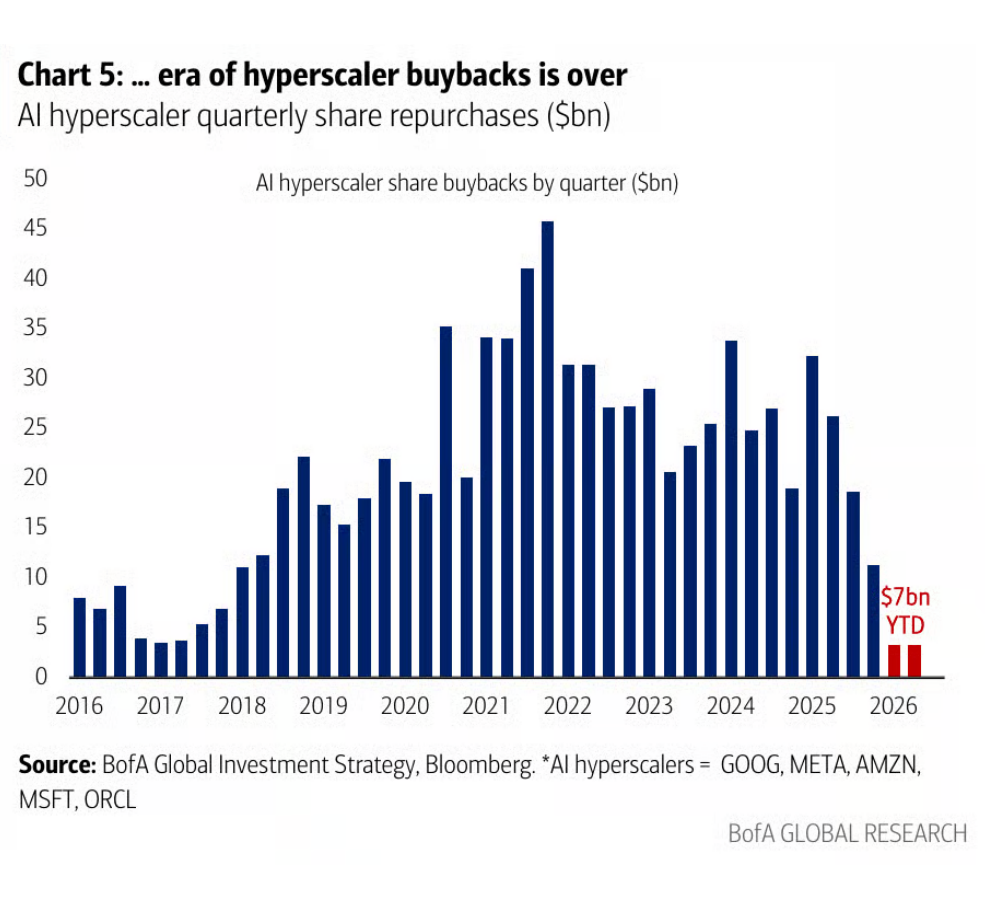

Chart 5: ... era of hyperscaler buybacks is over
AI hyperscaler quarterly share repurchases ($bn)

Source: BofA Global Investment Strategy, Bloomberg. *AI hyperscalers = GOOG, META, AMZN, MSFT, ORCL

BofA GLOBAL RESEARCH

Put differently, *the biggest buyers of US stocks for the past decade have become sellers*. Bloomberg's Simon White made the same point on Tuesday, warning that stock buybacks have a lot of work to do to counter new issuance, with Meta's deal and Anthropic's upcoming IPO adding to the "surfeit of supply." And when Meta's stock does get bought, it's sometimes by the people Meta pays:

换言之，过去十年里美国股票的最大买家如今却变成了卖家。彭博社的西蒙·怀特也在周二表达了同样的观点，他警告称，股票回购在抵消新发行股票的数量方面还有很长的路要走，而 Meta 的回购行动以及 Anthropic 即将进行的 IPO 将进一步加剧“供应过剩”的状况。而且，当有人购买 Meta 的股票时，有时买方正是 Meta 自己付钱雇用的员工。

When AI Met ABB: The Bond Market Polices The Bubble

当人工智能遇上 ABB：债券市场如何调控 AI 资本支出泡沫

So why are tech bonds suddenly where Hartnett wants to be? Because the two biggest super trends of the decade just collided. His framework:

那么，为何科技类债券会突然出现在哈特内特看好的位置呢？因为本世纪两大核心趋势刚刚发生碰撞。他的分析框架是：

> **Super Trends:** asset allocation in 2020s dominated by super trends of ABB (Anything but Bonds – Chart 6), ABC (Anywhere but China – Chart 7), ABD (Anything but Dollar – Chart 8) and AI (Artificial Intelligence – Chart 9); asset allocators structurally underweight bonds (on era of populism, big government, fiscal excess and nominal booms), underweight China stocks (on property market deflation, asset speculation curbs), overweight gold (on US$ debasement concerns as excess debt means QE/YCC needed to cap yields), overweight US tech stocks (on AI revolution, infrastructure buildout, US-China AI arms race); **2020s annualized returns... 10-year US Treasury -4%, China stocks (HSCEI) -5%, gold 15%, Nasdaq 17%.**
>
> 超级趋势：2020 年代资产配置由四大超级趋势主导——ABB（除了债券什么都买——图表 6）、ABC（除了中国哪里都去——图表 7）、ABD（除了美元什么都持有——图表 8）以及 AI（人工智能——图表 9）；资产配置者在结构上低配债券（因民粹主义时代、大政府、财政过度扩张和名义繁荣），低配中国股票（因房地产市场通缩、资产投机受限），超配黄金（因美元贬值担忧——过度债务意味着需要 QE/YCC 来压制收益率），超配美国科技股（因 AI 革命、基础设施建设、中美 AI 军备竞赛）；2020 年代年化回报……10 年期美国国债-4%，中国股票（恒生中国企业指数）-5%，黄金 15%，纳斯达克 17%。

Start with ABB. The 30Y Treasury total return index fell 50% from its July 2020 peak to the October 2023 low, the worst bond bear market in modern history, and it has gone basically nowhere since:

从 ABB 开始看。30 年期国债总回报指数从 2020 年 7 月的峰值下跌至 2023 年 10 月的低点，跌幅达 50%，这是现代史上最严重的债券熊市，此后该指数几乎毫无变动。

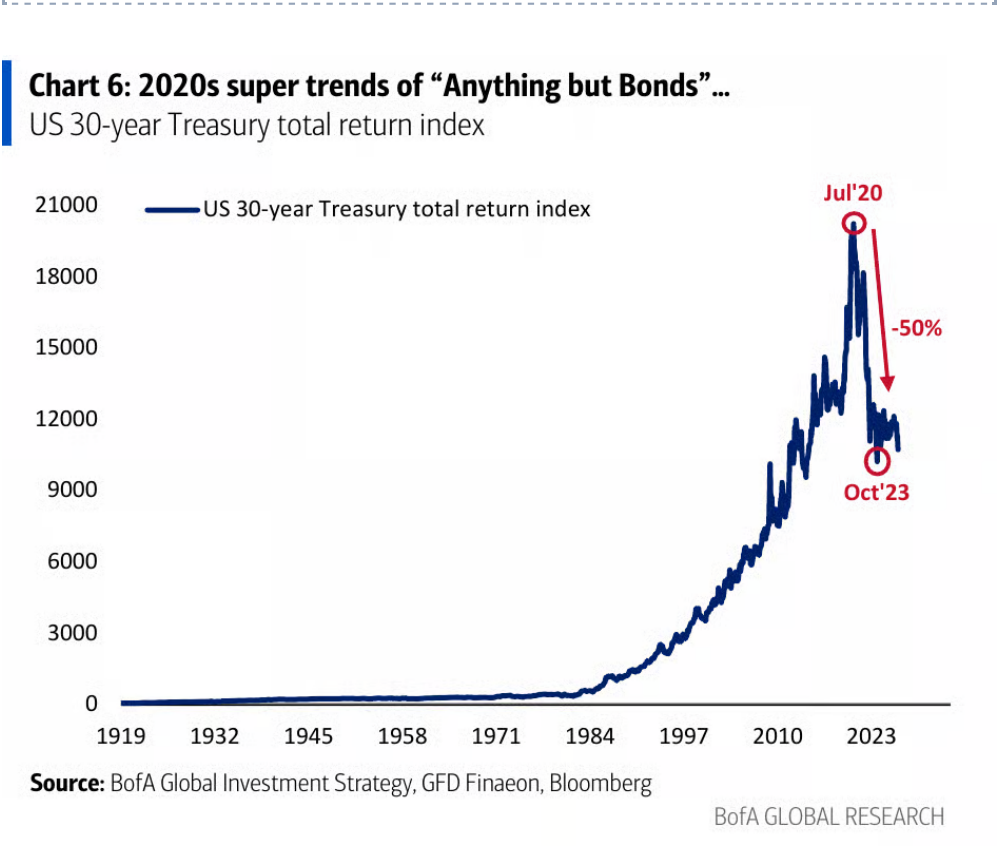

Chart 6: 2020s super trends of "Anything but Bonds"...
US 30-year Treasury total return index

Source: BofA Global Investment Strategy, GFD Finaeon, Bloomberg

BofA GLOBAL RESEARCH

ABC: US stocks have nearly quadrupled relative to US government bonds since 2004, while Chinese stocks relative to Chinese bonds sit below where they started in 2005, and at a fraction of their 2007 peak:

ABC：自 2004 年以来，美国股市相对于美国国债的涨幅已接近四倍；而中国股市相对于中国国债的估值则仍低于 2005 年的水平，也远不及 2007 年的峰值。

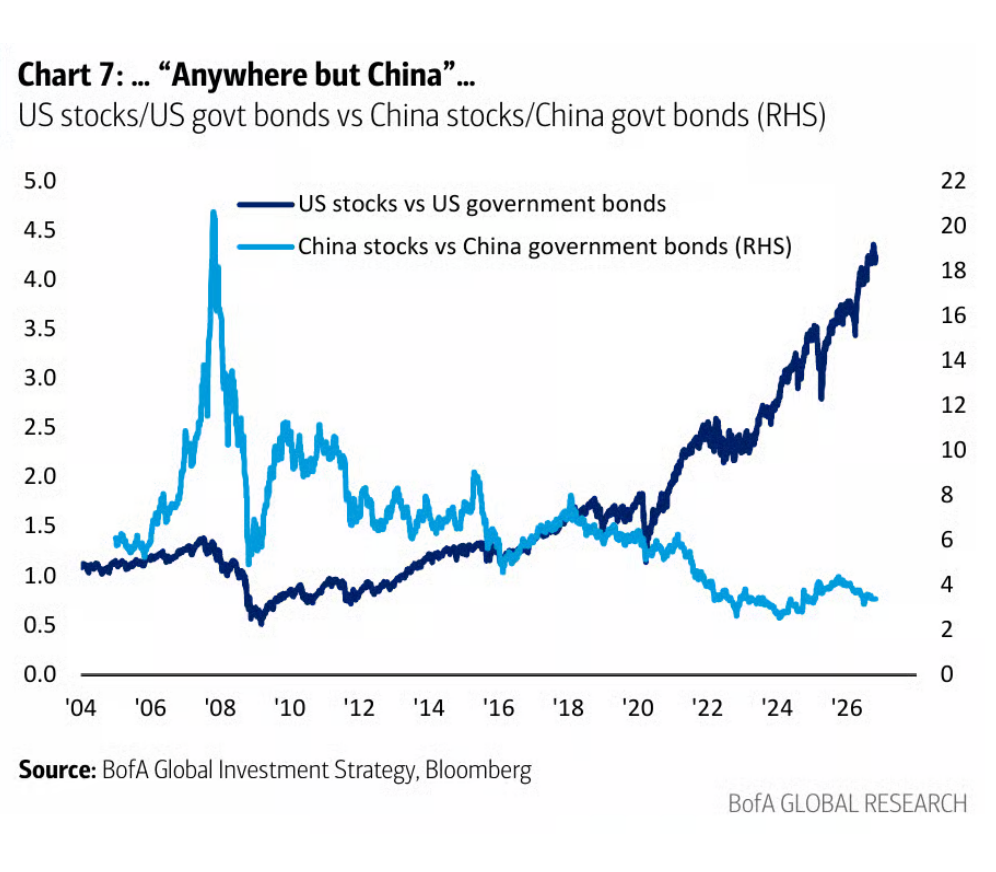

Chart 7: ... "Anywhere but China"...
US stocks/US govt bonds vs China stocks/China govt bonds (RHS)

Source: BofA Global Investment Strategy, Bloomberg

BofA GLOBAL RESEARCH

ABD: gold, the anti-dollar, peaked above $5,000 earlier this year on the "Warsh/Iran" spike, though BofA's chart already shows it sliding back toward $4,000, the level it broke this week:

美国：作为反美元资产的黄金，因“华什/伊朗”局势的激化，今年早些时候价格曾突破 5000 美元大关，不过根据美国银行发布的图表，其价格现已开始回落至 4000 美元附近——这一水平正是它本周所跌破的。

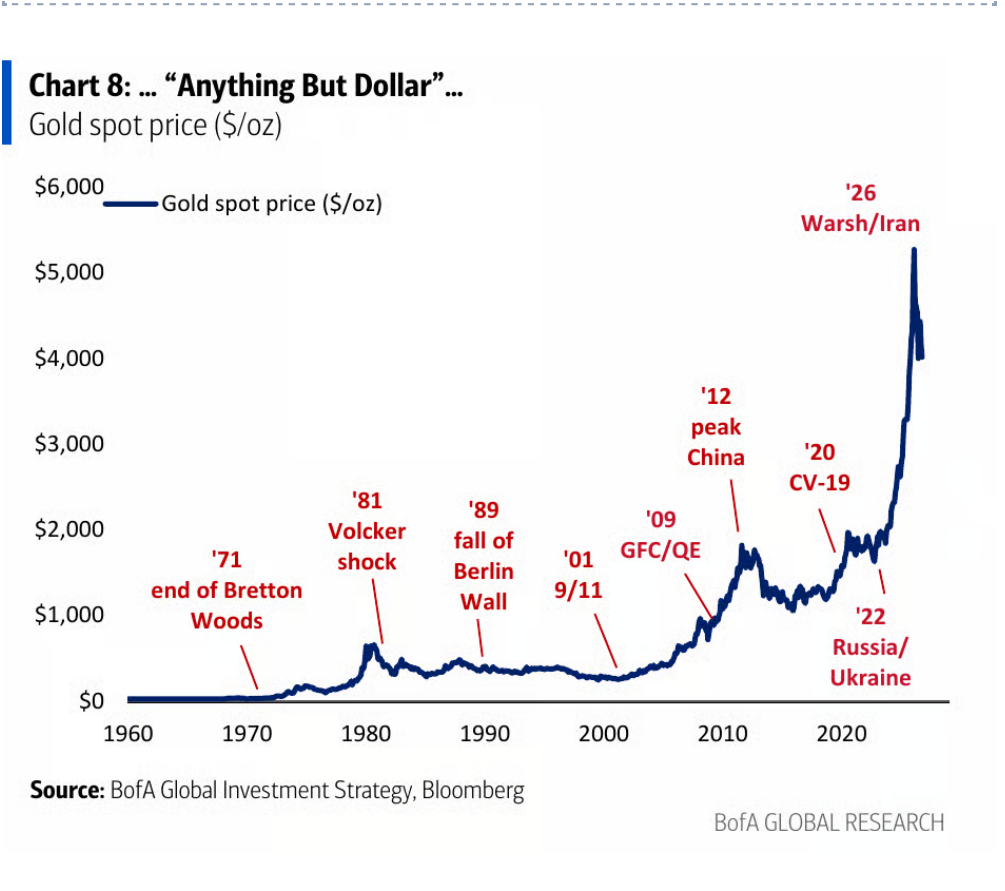

Chart 8: ... "Anything But Dollar"...
Gold spot price ($/oz)

Source: BofA Global Investment Strategy, Bloomberg

BofA GLOBAL RESEARCH

And AI: the "AI Big 10" is now 41% of US market cap, where the TMT bubble peaked and just shy of Japan in 1989 (as we tweeted back in September, that is "where all previous major bubbles peaked", except for the railroads):

再来看看人工智能领域：“AI 十大股”目前占美国市场总市值的 41%，这一比例已与 1989 年 TMT 行业泡沫达到顶峰时的水平相当，几乎与日本当时的水平持平（正如我们在 9 月所发的推文所说，除了铁路行业外，这些就是“所有以往重大泡沫达到的顶峰水平”）。

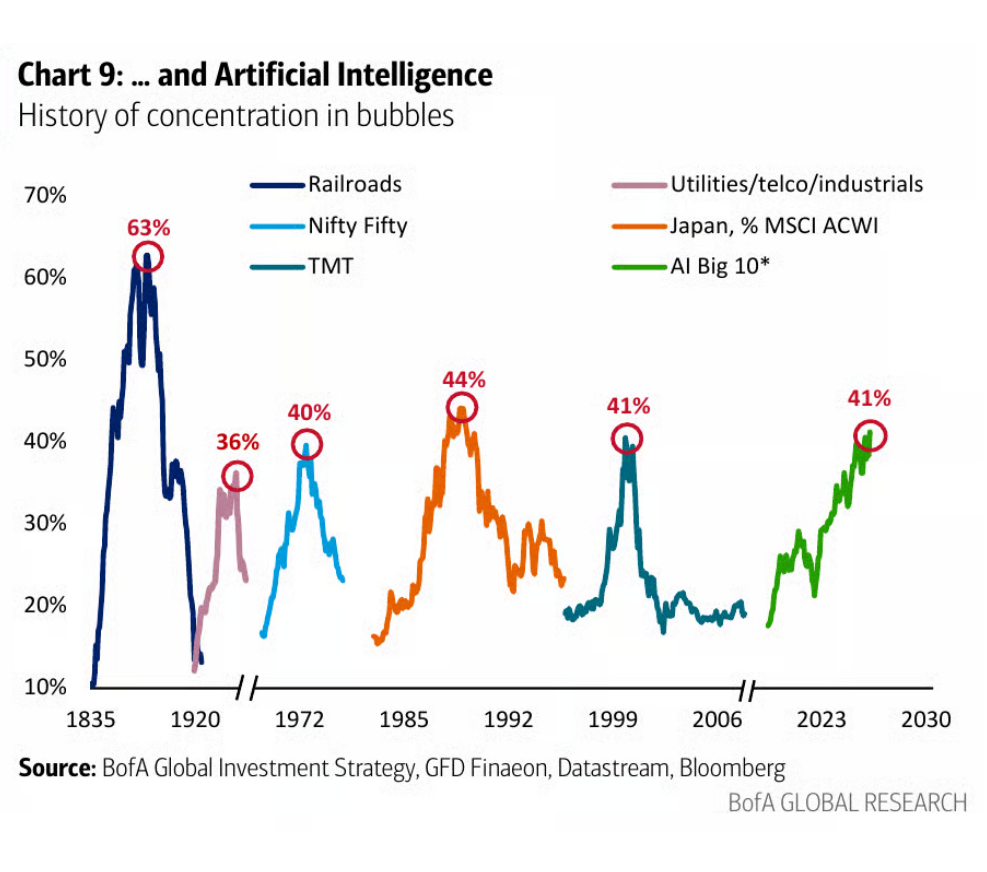

Chart 9: ... and Artificial Intelligence
History of concentration in bubbles

Source: BofA Global Investment Strategy, GFD Finaeon, Datastream, Bloomberg

BofA GLOBAL RESEARCH

Now here is where the two meet, in what is probably the most important paragraph of the note:

正是在此处，两者有了交集，也堪称这份报告中最重要的一段：

> **ABB & AI:** Lula/France civil unrest/UK budget... electorates want government goodies to address inequality and governments know austerity risks civil unrest... no reversal in era of political populism & polarization means asset allocators stay ABB and maintain structural yield curve steepener positions; but **ABB & higher yields now hurting AI stock bull as bond markets police AI hyperscaler capex surge ($240bn in '24 to $1.2tn in '27E) & free cash flow slump ($240bn in '24 to -$180bn in '27E)**; sure, no way policymakers allow disorderly rise in yields to threaten stock market wealth, collateral of banking system, stymie US path to victory vs China in AI war... YCC/QE threat will successfully cap bond yields; but risk assets and AI need fall in bond yields, easing of financial conditions.... **release valve in H1'27 likely geopolitical peace, big drop oil price, end of rate hikes.**
>
> ABB 与 AI：卢拉/法国骚乱/英国预算……选民希望政府提供福利以解决不平等问题，而政府深知紧缩政策有引发内乱的风险……在政治民粹主义和两极分化的时代，这一趋势不会逆转，这意味着资产配置者将继续维持 ABB 策略，并保持结构性的收益率曲线陡峭化头寸；但 ABB 与更高收益率如今正伤害 AI 股票牛市，因为债券市场正在约束 AI 超大规模企业的资本支出激增（从 2024 年的 2400 亿美元增至 2027 年预估的 1.2 万亿美元）以及自由现金流的骤降（从 2024 年的 2400 亿美元降至 2027 年预估的-1800 亿美元）；当然，决策者绝不可能允许收益率无序上升，从而威胁股市财富——银行体系的抵押品——并阻碍美国在 AI 战争中战胜中国的道路……YCC/QE 威胁将成功限制债券收益率；但风险资产和 AI 需要债券收益率下降、金融条件放松……2027 年上半年的释放阀可能是地缘政治和平、油价大幅下跌、加息结束。

The populism list is hard to argue with, and every item on it
