TMTB Morning Wrap TMTB 晨间综述

TMT BREAKOUT
4 MINUTES AGO • PAID

Good morning. **QQQs +1.33% / SP +55bps** after last week's rough stretch for Tech with QQQs - 6%, SOX -10%+, AI's 2nd worst week ever, and Tech momentum down 20% (now down YTD). Jefferies mentioned last week was their largest sell skew in Tech in over 5 years and worst week for AI winners vs. AI losers.

早上好。上周科技股经历艰难一周，QQQ 下跌 6%，SOX 跌幅超过 10%，AI 板块创史上第二差单周表现，科技股动量下跌 20%（目前年初至今转为下跌）。周一 QQQ 上涨 1.33%，标普 500 指数上涨 55 个基点。杰富瑞上周提到，这是其五年多来科技股卖出偏向最明显的一周，也是 AI 赢家股相较于 AI 输家股表现最差的一周。

But the past is the past and this week is starting on a better note. **Semis +4%** early with **CRWV +7%** on a GS upgrade to Buy **(NBIS/miners +6-7%** in sympathy), **INTC +4%** on a JPM upgrade, & **BE +5%** leading the way higher. **Software/Internet +40bps** lagging. **DDOG +4%** on a Bernstein upgrade; **META +40bps** lagging on mixed MS/3p notes ahead of earnings on Wednesday; **AMZN +2.4%** as MS makes it a top pick.

不过，过去已成过去，本周开局有所好转。半导体股早盘上涨 4%；CRWV 因高盛上调评级至"买入"而上涨 7%（NBIS 及矿业股受带动上涨 6%至 7%），INTC 因摩根大通上调评级而上涨 4%，BE 上涨 5%，领涨。软件和互联网板块上涨 40 个基点，表现落后。DDOG 因伯恩斯坦上调评级而上涨 4%；META 上涨 40 个基点，表现落后，周三公布财报前，市场对摩根士丹利及第三方研究机构的观点反应不一；摩根士丹利将 AMZN 列为首选股，推动其上涨 2.4%。

Asia mixed overnight but Korea was up after opening up down: TPX +0.04%, NKY -0.62%, SHCOMP +0.39%, Shenzhen +0.1%, Taiwan TAIEX -0.61%, Korea KOSPI +1.76%

隔夜亚洲市场表现不一，但韩国股市低开后走高：东证指数（TPX）+0.04%，日经 225 指数（NKY）-0.62%，上证综指（SHCOMP）+0.39%，深圳指数 +0.1%，台湾加权指数（TAIEX）-0.61%，韩国综合股价指数（KOSPI）+1.76%。

This week, we get **NFLX, LRCX, META, TXN** and **SPOT** to kick off earnings. We'll have some bogeys later today or tomorrow.

本周财报季将由 NFLX、LRCX、META、TXN 和 SPOT 拉开序幕。今天晚些时候或明天，我们会公布一些重点关注事项。

Lots to get to, so let's get to it...

要聊的内容很多，我们这就开始……

CRWV: Goldman upgrades to Buy/$106, says credit fears overstate funding risk and contract economics are stronger than market expects

CRWV：高盛将其评级上调至“买入”，目标价定为 106 美元；高盛表示，市场对信贷风险的担忧夸大了融资风险，且合同经济效益强于市场预期。

Goldman upgrades CRWV from Neutral after the ~43% pullback, arguing investors are overstating financing risk: industry checks suggest new debt costs may be only ~100–200bps above CRWV's current blended cost, while DDTLs are asset-/contract-backed and can still clear near or above original issue discounts despite unsecured bonds trading at ~13.5–15%. GS also sees upside to ARR/MW and unlevered IRRs as supply stays tight, with CRWV ranking top-2 among 300+ AI compute providers and delivering ~20% better performance/$ than peers. Forge/Omni further support a move up-stack beyond commodity GPU infrastructure. Buy, PT $106 from $139, ~73% upside.

Goldman 在 CRWV 回调 43% 后将其评级从中性上调，认为投资者夸大了融资风险：行业调研显示，新增债务成本可能仅比 CRWV 当前综合融资成本高 100–200 个基点；与此同时，延迟提款定期贷款（DDTL）有资产/合同作为支持，即使无担保债券的交易收益率达 13.5–15%，其发行仍可能接近或高于原始发行折价水平。GS 还认为，随着供给持续紧张，ARR/MW 和无杠杆 IRR 均有上行空间；CRWV 在 300 多家 AI 算力服务商中排名前二，且每美元性能比同行高 20%。Forge/Omni 也进一步支持其向价值链上游拓展、超越大宗商品化 GPU 基础设施的战略。买入，目标价由 139 美元下调至 106 美元，上涨空间 73%。

DDOG: Bernstein upgrades to OP/$350 as “Born in AI” demand reaccelerates far faster than expected

DDOG：Bernstein 上调评级至跑赢大盘，目标价 350 美元：“原生 AI”需求加速回升，远超预期

Bernstein reverses its prior downgrade after data shows token consumption at DDOG’s largest AI-lab customers reaccelerating to at least ~50% q/q, helped by Codex/model launches and aggressive price cuts, making its prior 2027 AI-growth slowdown assumptions look too conservative. Traditional customers remain weak and the ~$100M ARR OpenAI downsizing is still a headwind, but AI-native demand plus potential upside from consumer agents, cybersecurity and the Scout SRE AI Agent more than offset it; Bernstein raises near-term revenue growth by ~7pts and extends duration. Upgrades to Outperform from Market Perform, PT $350 from $237.

Bernstein 根据数据显示，DDOG 最大 AI 实验室客户的 Token 消耗环比重新加速至至少 50%，在 Codex/模型发布及大幅降价的推动下，撤回此前的下调评级；这也表明其此前对 2027 年 AI 增长放缓的假设过于保守。传统客户需求仍疲软，OpenAI ARR 缩减 1 亿美元仍构成拖累，但原生 AI 需求，加上消费级智能体、网络安全及 Scout SRE AI 智能体带来的潜在上行空间，足以抵消上述影响；Bernstein 将近期营收增速预测上调 7 个百分点，并延长增长持续期。评级由与大盘持平上调至跑赢大盘，目标价由 237 美元上调至 350 美元。

INTC: JPM upgrades to Neutral from UW as execution improves and AI tailwinds offset lingering share/foundry concerns

INTC：JPM 将评级由减持上调至中性，因执行情况改善且 AI 顺风抵消了持续存在的市场份额和晶圆代工业务担忧

JPM says the ~36% pullback since June leaves risk/reward more balanced, while execution under Lip-Bu Tan has improved across compute, manufacturing and strategic positioning. DCAI operating income reached ~$2.5B and surpassed CCG for the first time, Granite Rapids demand is “extremely tight,” 18A-P remains on schedule and 14A is targeted for 2028 HVM; ASIC services are also approaching a ~$2B run-rate, ~3x y/y. Server/PC share losses and external foundry traction remain key concerns, but JPM sees CY27/28 EPS ~15% above consensus and upgrades to Neutral from UW, PT $85.

JPM 表示，自 6 月以来回调~36%后，风险回报已趋于更加均衡；Lip-Bu Tan 执掌期间，公司在计算、制造和战略定位方面的执行均有所改善。DCAI 营业利润达到~$2.5B，首次超过 CCG；Granite Rapids 需求“极为紧俏”；18A-P 按计划推进，14A 目标于 2028 年实现大规模量产（HVM）。ASIC 服务的年化营收运行率也接近~$2B，~同比增长 3 倍。服务器/PC 市场份额流失以及外部客户对晶圆代工业务的认可度仍是主要担忧，但 JPM 预计 CY27/28 每股收益较市场共识高~15%，并将评级从减持（UW）上调至中性（Neutral），目标价$85。

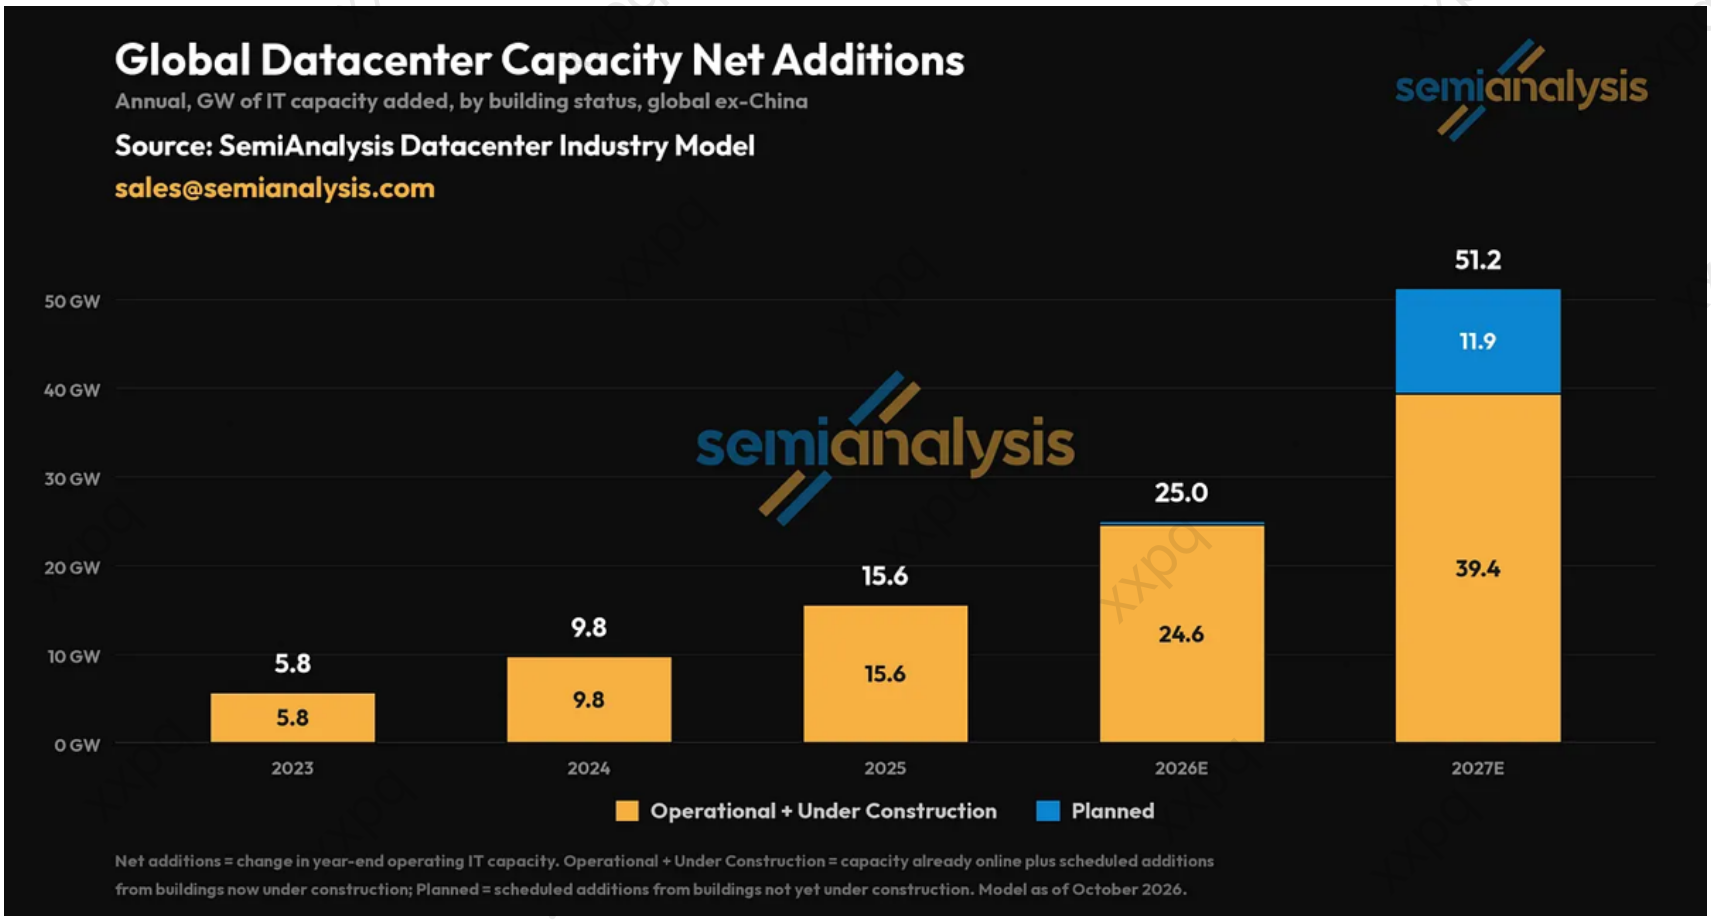

AI Infra/AI Power: SemiAnalysis sees +50GW of data-center capacity in 2027, with bottleneck shifting from power/buildings toward chips

AI 基础设施/AI 电力：SemiAnalysis 预计 2027 年数据中心容量将新增 50GW 以上，瓶颈将从电力和建筑转向芯片

SemiAnalysis argues 2027 data-center growth is materially underestimated, forecasting ~50GW of new capacity in a single year with >24GW already in advanced construction across just 40 campuses and ~60GW under construction more broadly. The key leading indicator is >$1T of 2026 YTD lease value already signed/closed, with Oracle, META, AWS, MSFT, GOOGL, NVDA, AMD, Anthropic and OpenAI all pursuing GW-scale capacity; modular/prefab designs are also cutting build times toward ~9–10 months and reducing MEP labor by up to ~63%. The implication is a sharp acceleration in compute supply, AI-lab/token revenue and capex, with SemiAnalysis

arguing the constraint could increasingly migrate from data centers/power to memory and logic chips in 2027–28.

SemiAnalysis 认为，市场严重低估了 2027 年数据中心的增长，预计单年新增容量将超过 50GW；仅 40 个园区就已有超过 24GW 的容量进入高级建设阶段，更广泛范围内还有 60GW 在建。关键先行指标是，2026 年年初至今已签署/敲定的租赁合同价值超过 1 万亿美元；Oracle、META、AWS、MSFT、GOOGL、NVDA、AMD、Anthropic 和 OpenAI 均在争取 GW 级容量。模块化/预制设计也将建设周期缩短至约 9–10 个月，并将机电管线（MEP）人工需求最多降低 63%。这意味着计算供给、AI 实验室/Token 收入和资本开支将大幅加速；SemiAnalysis 认为，2027–28 年的制约因素可能日益从数据中心/电力转向存储器和逻辑芯片。更多一手研报请加微信：FCCNN88

META: MS says every 100M Muse DAUs could require 1–4GW of GPUs, keeping capex higher for longer

META：摩根士丹利称，Muse 每新增 1 亿日活跃用户可能需要 1–4GW GPU，资本开支高位持续时间或更长。

MS estimates each 100M Muse DAUs could consume ~1–4GW of GPU capacity depending on token throughput; at ~500M DAUs using 50% of the free token allowance, Muse alone could require ~13GW, roughly all of META's modeled incremental 2027/28 capacity. That implies a longer/flatter agentic adoption curve and sustained ecosystem capex. Near term, Muse still has an engagement problem: ~300K U.S. downloads/day but only ~2.5M DAUs and ~20% 14-day retention, making

product innovation the key unlock. MS raises PT to $820 from $775 as stronger ads + AI subscriptions lift 2027/28 EPS 1%/3%; OW, $1,000 bull case.

MS 估计，每增加 1 亿 Muse 日活跃用户（DAU），根据 Token 吞吐量，可能需要~1–4GW 的 GPU 算力容量；若 DAU 达到~5 亿，且使用免费 Token 额度的 50%，仅 Muse 就可能需要~13GW，约相当于 META 模型估算的 2027/28 年全部新增算力容量。这意味着智能体应用的普及曲线将更长、更平缓，生态系统资本开支也将持续。短期来看，Muse 仍面临用户参与度问题：美国每日下载量达~30 万次，但 DAU 仅为~250 万，14 日留存率仅~20%，因此产品创新是实现突破的关键。MS 将目标价从 775 美元上调至 820 美元，因广告业务走强及 AI 订阅业务推动 2027/28 年 EPS 分别提升 1%/3%；增持评级，牛市情景目标价为 1,000 美元。

META: Hearing Clev saying demand in line (less upside than prior Q) with growth decelerating modestly as outlooks remain upbeat

---

AMZN: MS adds Top Pick, raises PT to $350 on AWS acceleration + agentic/robotics optionality

MS moves AMZN to Top Pick with ~40% upside and ~3:1 risk/reward, raising PT to $350 from $335. The core call is AWS: MS now sees ~47%/42% growth in 2027/28 with high-40s incremental EBIT margins, supporting a “rule of 90” profile and ~$16.50 of 2028 EPS. Bedrock could drive multiple expansion as inference scales, while AMZN’s logistics/network advantage positions it as an agentic-commerce winner; robotics is the sleeper lever, with every 10% of global units through robotics-enabled FCs worth ~$2–4B of recurring annual savings. OW/$350.

AMZN: AWS CFO defends AI spending – Axios

GOOGL: Mizuho sees TPU revenue reaching $100B in 2028, with line of sight to materially more

Mizuho raises Cloud estimates well above Street, modeling 2027/28 revenue of $206B/$301B vs. $185B/$281B consensus and TPU revenue of ~$67B/$100B at ~14% EBIT margins. The bigger upside is capacity: checks suggest ~1GW/~3GW of

TPU capacity in 2026/27 but line of sight to ~10GW in 2028, which could mathematically support >$200B of 2028 TPU revenue, roughly 2x Mizuho's current estimate. Ex-TPU Cloud still grows ~45% in both 2027/28, with Cloud reaching ~37% of Alphabet EBIT by 2028. OP/$460.

瑞穗大幅上调云业务预期，显著高于市场一致预期：预计 2027/28 年收入分别为 2,060 亿美元/3,010 亿美元，高于市场一致预期的 1,850 亿美元/2,810 亿美元；预计 TPU 收入为 ~670 亿美元/1,000 亿美元，EBIT 利润率为 ~14%。更大的上行空间来自产能：渠道调研显示，2026/27 年 TPU 产能约为 ~1GW/3GW，但到 2028 年有望达到 ~10GW；从数学上看，这足以支撑 2028 年 TPU 收入超过 2,000 亿美元，约为瑞穗当前预期的两倍。剔除 TPU 后，云业务在 2027/28 年仍均增长 ~45%；到 2028 年，云业务将占 Alphabet EBIT 的 ~37%。OP/460 美元。

GOOGL / MediaTek: TPU v9 design changes could push shipments into 2028 – Commercial Times

GOOGL / 联发科：TPU v9 设计变更或将发货时间推迟至 2028 年——《工商时报》

Commercial Times reports design changes to Google's TPU v9 could delay tape-out until January 2027 and shipments until Q1 2028. A roughly three-week redesign of Google's Core A is affecting MediaTek's Core B and I/O work. The report says November sampling remains targeted, with the production design expected to be finalized in Q2 2027.

《工商时报》报道称，Google TPU v9 的设计变更可能导致流片推迟至 2027 年 1 月，发货推迟至 2028 年第一季度。Google Core A 的重新设计耗时约三周，正影响联发科 Core B 和 I/O 相关工作。报道称，11 月送样的目标维持不变，预计于 2027 年第二季度完成量产设计定稿。

GOOGL: DB sees Cloud becoming bigger growth driver, with GCP potentially >100% while Search stays healthy

GOOGL：德意志银行认为云业务将成为更大的增长驱动力，GCP 增速或超 100%，而搜索业务仍保持稳健。

DB says Search remains solid at ~14% y/y despite tougher comps, with AI Overviews

improving monetization/intent, while YouTube checks are stronger and drive a ~$11.6B 3Q estimate vs. Street ~$11.4B. The bigger call is GCP: committed-dollar growth accelerated to 48.5% from 45% and consumption to >48%, with better capacity availability, TPU sales and AI-native workloads leading some checks to suggest growth could exceed 100% vs. DB's 92% FXN estimate. Agentic AI is the key debate, but DB views Google's Gmail/Search/Maps/Android distribution as a major advantage. Top Pick, PT $430.

德意志银行（DB）表示，尽管可比基数更高，搜索业务同比仍稳健增长~14%；AI Overviews 提升了变现能力和用户意图信号。YouTube 调研结果更强劲，推动其第三季度营收预估达到~$11.6B，高于市场一致预期的~$11.4B。更值得关注的是 Google Cloud（GCP）：已承诺金额增速从 45%加快至 48.5%，用量增速升至>48%；产能供应改善、TPU 销售以及 AI 原生工作负载等因素，使部分调研结果显示增速可能超过 100%，高于 DB 预计的按固定汇率（FXN）计算 92%。智能体 AI 是关键争论焦点，但 DB 认为，Google 在 Gmail、搜索、地图和 Android 上的分发优势显著。首选股，目标价$430。

GOOGL/AMZN: Susquehanna ad checks stay constructive; PTs unchanged

GOOGL/AMZN：Susquehanna 广告调查结果依然乐观；目标价不变

Susquehanna's agency/partner checks across paid search, YouTube and AMZN ads were constructive enough to leave estimates unchanged, with no material disruption from AI Overviews/chatbots flagged. GOOGL PT remains $460, based on ~$211B of 2027 Services EBITDA plus $151B Cloud revenue, while AMZN PT stays $325 with AWS, 1P and 3P all valued toward the upper end of peer multiples given superior growth.

Susquehanna 对付费搜索、YouTube 和 AMZN 广告业务开展的广告代理商/合作伙伴调查结果总体乐观，因此维持盈利预测不变；调查未发现 AI Overviews/聊天机器人造成重大业务扰动。GOOGL 目标价仍为 460 美元，基于~2027 年 2110 亿美元的服务业务 EBITDA 及 1510 亿美元的云业务收入。AMZN 目标价维持 325 美元；鉴于增长表现更优，AWS、第一方（1P）和第三方（3P）业务的估值均取同业倍数区间的较高水平。

Anthropic / AVGO: Blackstone offered more than 10%

yield on chip financing – FT

Anthropic / AVGO：据《金融时报》报道，Blackstone 获芯片融资逾 10%的收益率

The FT reports Anthropic is offering Blackstone a yield above 10% to anchor a $60B financing backed by five-year leases on 1.5GW of Google TPUs. Blackstone would provide $9B of the $18B junior tranche; Broadcom would guarantee $42B of senior debt. Anthropic's comparable June financing carried an 8.5% interest rate.

《金融时报》报道称，Anthropic 向 Blackstone 提供超过 10%的收益率，以争取其为一笔 600 亿美元融资担任基石投资方；该融资以 Google TPU 五年期租赁协议为支撑，涉及 1.5GW 算力。Blackstone 将提供 180 亿美元次级部分中的 90 亿美元；Broadcom 将为 420 亿美元优先债务提供担保。Anthropic 6 月进行的可比融资利率为 8.5%。

AVGO: Fubon sees 2028 ASIC upside underappreciated as OpenAI triples demand + Anthropic adds diversification

AVGO：富邦认为，OpenAI 将需求提高至三倍、Anthropic 拓展客户多元化，2028 年 ASIC 增长空间仍未获充分认可

Fubon calls AVGO the most undervalued ASIC name, with OpenAI demand raised to ~3M units in 2027 vs. 1M prior and Anthropic's first AVGO ASIC expected to tape out mid-2027 for 2H28 production. That meaningfully reduces Google TPU concentration risk, while Fubon argues even slower CSP capex would favor lower-TCO ASICs over GPUs; project allocations through 2029 are largely locked. GUC remains its LT top pick.

富邦证券称，AVGO 是估值最低的 ASIC 标的。其将 OpenAI 2027 年需求预测从此前的 100 万颗上调至 300 万颗；Anthropic 首款 AVGO ASIC 预计于 2027 年年中完成流片，并于 2028 年下半年投产。这显著降低了对 Google TPU 的集中度风险。富邦证券还认为，即使云服务提供商（CSP）资本开支增速放缓，较低的总拥有成本（TCO）也将使 ASIC 比 GPU 更具优势；截至 2029 年的项目分配基本已锁定。GUC 仍是其长期首选股。

SNOW: Stifel sees migration momentum offsetting more measured CoCo adoption

SNOW：Stifel 认为，迁移势头将抵消 CoCo 普及步伐趋于审慎的影响

Stifel's NYC checks were mixed: CoCo adoption is slower than the June read as customers cite high pricing and satisfaction with Claude Code, while Databricks continues taking Postgres share with a developer-led motion. Offsetting that, one SI partner has doubled migrations to 4–5/month with CoCo handling ~80% of the workload, supporting Stifel's view that migration velocity plus core workloads can sustain 30%+ product growth. Buy/$450.

Stifel 在纽约的调研反馈不一：客户称价格较高且对 Claude Code 感到满意，CoCo 的采用速度较 6 月调研时有所放缓；与此同时，Databricks 凭借开发者主导的推广方式，持续从 Postgres 手中抢占份额。另一方面，一家系统集成商（SI）合作伙伴的迁移量已翻倍至每月 4–5 个项目，其中 CoCo 承担约 80% 的工作量。这支持 Stifel 的观点：迁移速度加快叠加核心工作负载，有望支撑产品收入增长 30% 以上。买入评级，目标价 450 美元。

MSFT / Nscale: Microsoft exits UK data center deal as IPO valuation faces pressure – WSJ / Bloomberg

MSFT / Nscale：微软退出英国数据中心交易，IPO 估值承压——《华尔街日报》/彭博

WSJ reports Microsoft exited Nscale's planned 50MW UK facility for about 23,000 Nvidia GB300 chips. Reuters, citing the FT, says the site was unlikely to receive grid power until after 2030. Other Microsoft contracts remain intact. Bloomberg reports some investors want Nscale's IPO valued at $16–19B, versus its roughly $30B target.

《华尔街日报》报道称，微软退出了 Nscale 计划建设的英国 50MW 数据中心项目。该项目原计划部署约 23,000 颗 Nvidia GB300 芯片。路透社援引《金融时报》报道称，该站点可能要到 2030 年后才能接入电网。微软的其他合同仍未变动。彭博报道称，部分投资者希望 Nscale 的 IPO 估值为 160 亿至 190 亿美元，低于其约 300 亿美元的目标估值。

MTCH: Evercore upgrades to OP/$53 as Tinder MAUs

inflect and payer growth reaccelerates

MTCH：Evercore 上调至跑赢大市，目标价 53 美元；Tinder 月活跃用户拐点显现，付费用户增长重新加速

Evercore upgrades MTCH to Outperform from In Line and raises PT to $53 from $39, arguing Tinder's recovery is accelerating: Sensor Tower shows global MAU growth turned positive y/y in September for the first time since Feb. 2022, while Tinder DAU improved to -1% y/y in August with further gains in September. Its U.S. dating survey also improved, with Gen Z Tinder usage rising to 78% from 64%. Evercore raises FY27 Tinder payer growth to 3.8% from -1.5% and FY27 revenue/EBITDA ~3%/~3%, both ~3% above Street.

Evercore 将 MTCH 评级从"与大盘持平"上调至"跑赢大盘"，并将目标价从 39 美元上调至 53 美元，理由是 Tinder 复苏正在加速：Sensor Tower 数据显示，9 月全球月活跃用户（MAU）同比增长自 2022 年 2 月以来首次转正；Tinder 日活跃用户（DAU）同比降幅在 8 月收窄至 1%，9 月进一步改善。Evercore 的美国约会调查也有所改善，Z 世代使用 Tinder 的比例从 64%升至 78%。Evercore 将 FY27 Tinder 付费用户增长预测从-1.5%上调至 3.8%，并将 FY27 营收/EBITDA 预测上调~3%/~3%，两项预测均比华尔街一致预期高~3%。

LRCX/AMAT: Hearing Clev positive, moving up forecasts on stronger demand

LRCX/AMAT：据悉，Clev 观点积极，因需求强劲而上调预测

Analogs: Hearing Edge positive saying cycle gaining momentum with 3Q demand ahead of plan 2027 growth expectations firming to high teens as supply tightens/pricing rises and auto restocking gains traction; TXN/MPWR favored

模拟芯片：据悉，Edge 观点积极，称行业周期势头增强；第三季度需求超出计划，随着供应趋紧、价格上涨及汽车行业补库存逐渐显现，2027 年增长预期趋稳于高十几个百分点；看好 TXN/MPWR

Analogs: Wells likes MPWR/ALGM/ADI into 3Q despite tougher beat/raise expectations

模拟芯片：Wells 看好 MPWR/ALGM/ADI，认为其第三季度业绩仍有表现空间，尽管超预期并上调指引的门槛更高

Wells says analog sentiment has cooled, but strong beat/raise expectations still make the group setup demanding; preferred risk/reward is MPWR, ALGM and ADI. MPWR should beat/raise again, with 2026 Enterprise Data growth now >145% y/y vs. ≥130% prior; ALGM's ~25% pullback creates a better setup as data-center demand stays strong and auto recovers; ADI should benefit from industrial recovery + DC strength. TXN remains a preferred crowded long with solid industrial/DC trends and potential GM upside, while NXPI may see auto upside and ON could benefit from continued GM recovery.

Wells 表示，模拟芯片板块情绪有所降温，但市场对业绩超预期并上调指引仍有较高预期，因此板块配置门槛依然较高。其偏好的风险回报标的为 MPWR、ALGM 和 ADI。MPWR 有望再次超预期并上调指引，2026 年企业数据业务增长预测现已超过 145%（此前为至少 130%），同比增幅；ALGM 回调~25%后配置时点更佳，数据中心需求依然强劲，汽车市场也在复苏；ADI 则有望受益于工业复苏和数据中心业务强劲。TXN 仍是拥挤交易中首选的做多标的，工业和数据中心趋势稳健，且毛利率（GM）存在上行空间；NXPI 或受益于汽车业务上行，ON 则可能受益于毛利率持续复苏。

EXPE: Hearing M-sci positive saying nights notably improved exiting Sept

EXPE：据悉，M-sci 观点积极，称截至 9 月底，间夜数显著改善

Memory: CLSA Asia checks turn more selective; investors now prefer Samsung over Hynix

存储：CLSA 亚洲调查显示，投资者的选择更趋审慎；目前更青睐三星而非海力士

CLSA says memory sentiment has weakened on AI fatigue, macro/financing concerns

and profit-taking, but investors are not broadly bearish and increasingly see the recent selloff as attractive. The key debate is whether DRAM ASP/margins peak after 1H27; CLSA expects pricing momentum to moderate but not collapse given tight supply through 2028, greater LTA use with prepayments/cancellation penalties and continued mix improvement. CXMT's new DRAM architecture is not viewed as a material near-term threat given yield/capacity/technology hurdles. Investors now favor Samsung over Hynix on HBM share gains plus potential 2027 foundry recovery; catalysts include earnings/shareholder returns, solid guidance, a potential Anthropic IPO and broader agentic-AI adoption.

CLSA 表示，受 AI 热潮降温、宏观经济与融资担忧以及获利了结影响，存储市场情绪有所转弱；但投资者并未普遍转为看空，且越来越多地认为近期抛售带来了有吸引力的买入机会。核心争议在于 DRAM 平均售价（ASP）和利润率是否会在 2027 年上半年之后见顶。CLSA 预计，定价动能将有所放缓但不会崩跌，因为供应紧张局面将持续至 2028 年；长期供货协议（LTA）的使用将增加，并包含预付款和取消罚金，同时产品组合将持续改善。鉴于良率、产能和技术方面的障碍，投资者并不认为长鑫存储（CXMT）的新型 DRAM 架构会构成明显的近期威胁。目前，投资者更看好三星而非海力士，原因是三星有望提升 HBM 市场份额，且晶圆代工业务可能在 2027 年复苏。催化因素包括业绩和股东回报、稳健的业绩指引、Anthropic 可能进行的 IPO，以及智能体 AI 应用的进一步普及。

SPCX: MS says AI is barely priced at current levels; Flight 15 + 2027 compute capacity are the key catalysts

SPCX：摩根士丹利表示，当前估值几乎尚未反映 AI 的价值；Flight 15 与 2027 年算力产能是关键催化因素

MS says 3Q numbers themselves matter less than clues around SpaceX's broader "Physical Intelligence Economy" opportunity. At ~$146/share, its model assigns ~$127 to Space/Connectivity, leaving just ~$19/share for AI, or ~2x 2028E EV/Sales. For 3Q, MS is roughly in line at $13.0B revenue/$6.9B adj. EBITDA, but the bigger debate is YE27 compute: buyside increasingly expects closer to 10GW than 5GW vs. MS at 4.9GW/Street ~6GW, while recent neocloud deals imply ~$30–50/W economics. Flight 15 and a potential first ship catch in early November could be the biggest post-IPO de-risking catalyst; financing remains the key overhang, with MS modeling ~$60B/$80B/$90B of issuance in 2027/28/29. OW/$300.

MS 表示，3Q 业绩本身的重要性不及其对 SpaceX 更广泛“物理智能经济”机遇的线索。按每股~$146 计，其模型将~$127 归于太空/连接业务，留给 AI 的仅为每股~$19，相当于 2028E EV/Sales 的~2 倍。对于 3Q，MS 的预期大致符合市场共识：营收$13.0B、调整后 EBITDA $6.9B；但更大的争论在于 YE27 算力规模：买方越来越多地预计接近 10GW，而非 5GW；MS 预测为 4.9GW，市场共识为~6GW。近期新云服务商交易则意味着~每瓦$30–50 的经济效益。Flight 15 以及可能在 11 月初首次实现捕获返回，或将成为 IPO 后最重要的风险消除催化剂；融资仍是关键悬念，MS 预计 2027/28/29 年分别发行~$60B/$80B/$90B。增持（OW）/目标价$300。

AAPL: BofA says iPhone Duo demand remains exceptionally tight, with lead times extending into Jan 2027

AAPL：BofA 称 iPhone Duo 需求依然极为旺盛，交货周期已延长至 2027 年 1 月

BofA says global iPhone Duo lead times have stretched to ~82 days, with Apple.com at ~102 days and international availability pushed to Jan. 22; launch-day store inventory is already sold out globally. By contrast, iPhone 18 Pro lead times normalized to 8 days from 9, while Pro Max remains tighter at 15 days; China Pro fell sharply to 4 days from 11. BofA reiterates Buy, viewing Duo supply tightness as the key positive demand signal.

BofA 称，iPhone Duo 全球交货周期已延长至~82 天，Apple.com 上的交货周期为~102 天，国际市场供货已推迟至 1 月 22 日；全球首发日门店库存已售罄。相比之下，iPhone 18 Pro 交货周期从 9 天回落至 8 天，Pro Max 仍相对紧俏，为 15 天；中国市场 Pro 交货周期从 11 天大幅降至 4 天。BofA 重申买入评级，并将 Duo 供应紧张视为需求强劲的关键信号。

AAPL: Jefferies says underlying iPhone 18 weakness is intensifying; Duo strength only in line with expectations

AAPL：Jefferies 称 iPhone 18 潜在需求疲软势头加剧；Duo 表现强劲，但仅符合预期

Jefferies says iPhone 18 Pro/Pro Max demand is weaker than expected, with China

lead times now ~0 days vs. 6/25 days last year, PDD already discounting 18P/PM by ~6%/9%, and supply-chain checks pointing to ~10–15% cuts in some 2nm/3nm chip orders. The Duo's ~3-month lead time looks strong but is broadly consistent with market expectations for only ~6–7M 2026 shipments, not incremental upside. China iPhone volumes grew >20% in Sep/Oct, but Jefferies believes much of that reflects discounted 17P/PM channel inventory rather than healthy iPhone 18 demand. Underperform, PT $263.66.

杰富瑞称，iPhone 18 Pro/Pro Max 需求弱于预期，中国市场交付周期目前为~0 天，而去年为 6/25 天；拼多多已对 18P/PM 分别打~6%/9%的折扣，供应链调研显示，部分 2nm/3nm 芯片订单将削减~10–15%。Duo 的~3 个月交付周期看似强劲，但总体符合市场对 2026 年出货量仅~6–7M 部的预期，并不代表额外上行空间。中国 iPhone 销量在 9 月/10 月增长超过 20%，但杰富瑞认为，其中很大一部分反映的是打折销售的 17P/PM 渠道库存，而非 iPhone 18 需求强劲。评级：跑输大盘，目标价 263.66 美元。

TER: UBS sees AI test demand strengthening, with 2027 EPS still well above Street

UBS expects another beat/raise with Sep rev/EPS of $1.27B/$2.12 and Dec guide of ~$1.32B/$2.24 vs. Street $1.27B/$2.09. Compute remains the driver: AMZN Trainium 3 shipments are modeled at ~1.8M/~2.8M units in 2026/27, NVDA networking remains strong and GOOGL begins contributing ahead of a larger 2027 ramp. UBS sees Semi Test TAM reaching ~$22–24B by 2028, supporting ~$8–9B TER revenue/~$20 EPS; 2027 EPS is $14.19 vs. Street $11.75. Buy, PT $485 from $500.

TER：瑞银认为 AI 测试需求正在增强，2027 年每股收益仍显著高于市场一致预期

瑞银预计公司将再次超预期并上调指引：9 月季度营收/每股收益为 12.7 亿美元/2.12 美元，12 月季度指引为~13.2 亿美元/2.24 美元，高于市场一致预期的 12.7 亿美元/2.09 美元。计算业务仍是主要驱动力：预计 AMZN Trainium 3 在 2026/27 年的出货量为~1.8M/~2.8M 颗；NVDA 网络业务保持强劲，GOOGL 的贡献也将先于 2027 年更大规模的增长启动。瑞银预计半导体测试总潜在市场（TAM）到 2028 年将达到~220 亿–240 亿美元，支撑 TER 营收达到~80 亿–90 亿美元、每股收益约 20 美元；2027 年每股收益为 14.19 美元，高于市场一致预期的 11.75 美元。买入，目标价由 500 美元下调至 485 美元。

STX: UBS sees huge Dec-Q upside as HAMR + pricing drive another margin step-up

STX：瑞银认为 12 月季度业绩有巨大上行空间，HAMR 与定价将推动利润率进一步提升

UBS models Sep rev/EPS at $4.21B/$7.56 and Dec at $5.01B/$10.06 vs. Street $4.51B/$8.54, with GM reaching 61.5% vs. Street 59.4% as EB shipments and ASP both rise ~9% q/q and HAMR cost-downs accelerate. Its CY27 EPS is ~$75.5 vs. Street ~$48.8. UBS remains positive near term but Neutral structurally, arguing TDK external heads/Toshiba capacity can eventually break the “no new capacity” narrative and drive a late-2028/early-2029 downcycle. PT $780 from $860.

UBS 预计 9 月营收/EPS 为$4.21B/$7.56，12 月为$5.01B/$10.06，低于市场预期的$4.51B/$8.54；随着 EB 出货量和平均售价（ASP）环比均上涨~9%，且 HAMR 成本下降加快，毛利率（GM）将达到 61.5%，高于市场预期的 59.4%。其 CY27 EPS 预测为~$75.5，高于市场预期的~$48.8。UBS 短期仍持积极看法，但结构性立场为中性，认为 TDK 外部磁头及东芝产能最终可能打破“没有新增产能”的叙事，并引发 2028 年末至 2029 年初的下行周期。目标价由$860 下调至$780。

KLAC: UBS sees solid print but remains skeptical it keeps pace with WFE growth

KLAC：瑞银预计业绩稳健，但仍怀疑其能否跟上 WFE 增长步伐

UBS expects Sep rev/EPS of ~$4.12B/$1.21 vs. Street $4.04B/$1.18 and Dec roughly in line at $4.50B/$1.36. Customer conversations are already shifting toward 2028/29, with upside from INTC inspection adoption, Terafab and TSMC A14 capacity, but UBS argues near-term WFE growth is too memory-heavy for KLAC given structurally lower memory exposure and sees less pricing upside than at ASML/AMAT. Neutral, PT $190 from $200.

瑞银预计 9 月季度营收/EPS 为$4.12B/$1.21，高于市场预期的$4.04B/$1.18；12 月季度预计大致符合预期，为$4.50B/$1.36。客户讨论已开始转向 2028/29 年，英特尔（INTC）采用检测方案、Terafab 及台积电（TSMC）A14 产能均带来上行空间。但瑞银认为，近期 WFE 增长过于依赖存储器，而 KLAC 在结构上对存储器市场的敞口较低；同时，其定价上行空间也小于 ASML/AMAT。评级中性，目标价$190（此前为$200）。

GLW: BofA sees Optical + Enterprise strength sustaining estimate upside; Buy/$200

GLW：美国银行认为光学与企业业务强劲，可支撑预期持续上调；买入，目标价$200

BofA models F3Q revenue/EPS of $5.04B/$0.89, with Optical +7.8% q/q to $2.23B as hyperscaler/enterprise demand and carrier recovery support upside; DCI remains a ~$1B opportunity with further potential from optical scale-up/Photonics. F4Q guide is seen at ~$5.3B revenue and $0.92–0.96 EPS, helped by Optical +8% q/q and Solar +17% as profitability improves. FY26 rev/EPS rises to $19.4B/$3.33 from $19.2B/$3.30; Buy/$200.

美国银行预计 F3Q 营收/EPS 为$5.04B/$0.89。其中，光学业务环比增长 7.8%至$2.23B，受超大规模云服务商和企业需求以及运营商市场复苏支撑，业绩有望超预期。DCI 仍是一个$1B 的机遇，光学扩容/光子技术也有望带来进一步增长潜力。预计 F4Q 营收指引为$5.3B、EPS 为$0.92–0.96；光学业务环比增长 8%、太阳能业务增长 17%，并推动盈利能力改善。FY26 营收/EPS 预测由$19.2B/$3.30 上调至$19.4B/$3.33；买入，目标价$200。

SEMCO: CLSA says BT has joined the pricing upcycle, strengthening the AI earnings-upgrade case

SEMCO：CLSA 称 BT 已加入价格上行周期，进一步强化 AI 驱动盈利预期上调的逻辑

CLSA says Semco's new KRW360.5B 2027 substrate contract is predominantly BT substrate at materially higher pricing, with no associated capacity expansion, making price/mix the primary earnings lever. BT utilization is already ~80–90%, limiting incremental supply and strengthening pricing power; CLSA suspects Micron is the

lead customer and the demand is tied to AI memory, potentially SOCAMM or HBM. The deal equals ~32% of Semco's 2025 BT revenue, and further higher-priced renewals could broaden AI earnings upside. High-Conviction Outperform, street-high ₩3.2M PT.

CLSA 表示，Semco 新签的 2027 年 KRW360.5B 基板合同以 BT 基板为主，定价显著更高，且不涉及相关产能扩张，因此价格和产品组合是盈利增长的主要杠杆。BT 产能利用率已达~80–90%，限制了增量供给并增强了定价能力；CLSA 猜测，美光是主要客户，相关需求与 AI 存储有关，可能涉及 SOCAMM 或 HBM。该合同相当于 Semco 2025 年 BT 收入的~32%；若后续续约价格进一步提高，AI 带来的盈利上行空间有望扩大。高确信度跑赢大市评级，目标价 ₩3.2M，为市场最高。

SOFTWARE

MSFT: Bernstein sees Azure + M365 acceleration converging, with Copilot nearing material revenue contribution

MSFT：Bernstein 认为 Azure 与 M365 增长加速形成共振，Copilot 即将对收入作出显著贡献

Bernstein says the setup remains favorable as Azure growth should accelerate into the high-40s while M365 Commercial Cloud approaches ~20%, with the key thesis that Azure revenue growth outpaces Capex even after component inflation and Copilot becomes large enough to reaccelerate Office growth over the next few quarters. Bernstein is above Street on both segments and Azure for 1FQ/2FQ27, with recent capacity additions creating additional outer-year upside. OP, PT $662 from $660.

Bernstein 表示，当前态势仍然有利：Azure 增速应加快至高 40%区间，M365 商业云增速则接近~20%。核心投资逻辑是，即使零部件成本上涨，Azure 收入增速仍将超过资本开支增速；同时，Copilot 的规模将足以在未来几个季度推动 Office 增长重新加速。Bernstein 对这两个业务板块以及 Azure 在 1FQ/2FQ27 的预测均高于市场一致预期；近期新增产能也带来了未来年度的额外上行空间。跑赢大市评级，目标价由$660 上调至$662。

MSFT: MS sees Azure upside surprise, with capacity

ramp supporting sustained acceleration

MSFT：摩根士丹利看好 Azure 超预期表现，产能爬坡将支撑增长持续加速

MS sees Azure as the key upside lever into F1Q27, with buyside needing ~47% cc growth vs. 44–45% guide and, more importantly, a Q2 guide holding y/y growth roughly stable. Capacity is the incremental driver: ~3.25GW came online in FY26 with another ~4.25GW expected in FY27, while deployment-to-revenue readiness has improved >50%; M365 also needs ~17%+ cc growth with Copilot/AI share gains supporting acceleration. Despite the higher bar and ~$220B FY27 CapEx, MS sees valuation attractive at ~27x NTM EPS/~1.25x PEG and >20% EPS growth beyond FY27. OW/$600.

MS 认为，Azure 是 F1Q27 业绩上行的关键杠杆。买方预期其固定汇率营收增速达到~47%，高于 44–45%的指引；更重要的是，Q2 指引应能维持同比增速大致稳定。产能是增量驱动因素：FY26 新增~3.25GW 投运，预计 FY27 还将新增~4.25GW；与此同时，部署至可产生收入阶段的准备度提升了>50%。M365 也需要实现固定汇率增速~17%+，Copilot/AI 带来的份额提升将支持增速加快。尽管预期门槛更高，且 FY27 资本开支达~$220B，MS 仍认为估值具有吸引力：远期 12 个月 EPS 的~27 倍/PEG 约 1.25 倍，且 FY27 之后 EPS 增速将超过 20%。增持/$600。

Software/TWLO: Jefferies alt-data favors SHOP/TOST; TWLO traffic deceleration is key yellow flag

软件/TWLO：Jefferies 另类数据看好 SHOP/TOST；TWLO 流量增速放缓是关键预警信号

Jefferies' 3Q alt-data is strongest for TOST, with ordering visits +21% y/y, logins +67% and Local downloads +130%, while SHOP app traffic held ~+99% despite tougher comps. TWLO is the main caution as web traffic slowed sharply to +21% from +49% in 2Q; HUBS traffic remains strong at +26% but needs to convert into better net adds. NOW job postings fell 20% y/y, largely overhead, which Jefferies sees as supportive of FY27 bookings/margins.

Jefferies 的 3Q 另类数据中，TOST 表现最强：下单访问量同比增长+21%，登录量增长+67%，本地下载量增长+130%；尽管比较基数更高，SHOP 应用流量仍保持~+99%。TWLO 是主要风险点，其网站流量增速从 2Q 的+49%大幅放缓至+21%。HUBS 流量仍强劲，增长+26%，但需要转化为更好的净新增客户数。NOW 招聘职位发布量同比下降 20%，主要来自后台职能岗位；Jefferies 认为这有利于 FY27 订单额/利润率。

Software: BNP reseller survey rebounds; ORCL + GenAI stand out, MSFT/SNOW also strong

软件：BNP 经销商调查回升；ORCL 与生成式 AI 表现突出，MSFT/SNOW 也强劲。

BNP's October reseller survey shows software demand improving from July, with overall IT spend score rising to 3.1 from 2.0 and GenAI becoming the #1 trailing and forward spending category, overtaking cybersecurity. ORCL was the biggest positive surprise, with ORCL DB at AWS/Azure jumping into the top-3 demanded products and OCI/Fusion also improving; M365 Copilot rose to Microsoft's #2 product from #5, while SNOW continued to outperform Databricks. BNP reiterates OP on ORCL/MSFT/SNOW and remains cautious on ADBE/IBM/ZM, which ranked among the weakest demand trends.

BNP 10 月经销商调查显示，软件需求较 7 月有所改善，整体 IT 支出评分从 2.0 升至 3.1，生成式 AI 成为过去及未来支出类别中的第一名，超越网络安全。ORCL 带来最大幅度的正面意外：AWS/Azure 上的 ORCL DB 跃升至需求产品前三，OCI/Fusion 需求也有所改善；M365 Copilot 从微软产品需求排名第五升至第二，而 SNOW 继续跑赢 Databricks。BNP 重申对 ORCL/MSFT/SNOW 的"跑赢大盘"评级，并对 ADBE/IBM/ZM 保持谨慎，这几家公司均位列需求趋势最弱之列。

TEAM: BofA says key debate shifts to normalized growth post-Data Center; TWC must carry the next leg

TEAM：BofA 称，关键争论焦点转向数据中心业务之后的常态化增长；TWC 必须支撑下一阶段增长

BofA says the stock increasingly hinges on whether organic Cloud/Subscription ARR

can stay durable as Data Center migration benefits fade, with FY27 guided to +13% revenue, +18% Subscription ARR and +25.5% Cloud. Teamwork Collection is the key upside lever, bundling Jira/Confluence/Loom/Rovo with 10x Rovo credits to drive higher ARPU, seat expansion and broader penetration; the risk is migration-related growth fades faster than TWC adoption ramps. Buy/$210.

BofA 称，随着数据中心迁移带来的利好逐渐消退，股价越来越取决于有机云业务/订阅 ARR 能否保持韧性；公司对 FY27 的指引为收入增长 13%、订阅 ARR 增长 18%、云业务增长 25.5%。Teamwork Collection 是关键上行驱动因素：该产品将 Jira/Confluence/Loom/Rovo 打包，并提供 10 倍 Rovo 额度，以提升 ARPU、扩大席位数并拓展渗透范围。风险在于，迁移相关增长消退的速度可能快于 TWC 普及提速。买入/$210。

GTLB: KeyBanc says Anthropic Scion is not a commercial threat; Anthropic remains a customer

GTLB：KeyBanc 称 Anthropic 旗下 Scion 并非商业威胁；Anthropic 仍是客户。

KeyBanc says the ~7% selloff looks overdone: Anthropic remains a GTLB customer, while Scion is an internal tool for extremely large repos, explicitly not a git replacement and not intended for general availability. Anthropic plans to continue partnering with GitLab/GitHub; the only real risk would be another AI lab turning a similar architecture into a commercial competing product, which does not exist today.

KeyBanc 表示，~7%的抛售幅度似乎过度：Anthropic 仍是 GTLB 客户，而 Scion 是用于超大型代码仓库的内部工具，明确不是 git 的替代品，也无意面向大众提供。Anthropic 计划继续与 GitLab/GitHub 合作；唯一真正的风险是另一家 AI 实验室将类似架构开发成商业竞争产品，但目前并不存在此类产品。

INTERNET

PINS: Phillip Securities initiates Buy/$30, sees significant international monetization runway

PINS：Phillip Securities 首予“买入”评级，目标价 30 美元，认为国际市场变现空间显著

Phillip Securities sees meaningful long-term upside from monetizing PINS' 640M global MAUs, particularly internationally where revenue per user remains underdeveloped. The firm also highlights Pinterest's AI-powered visual search/discovery platform as a key differentiator supporting sustained engagement and monetization growth. Initiates Buy/$30.

Phillip Securities 认为，PINS 通过 640M 全球月活跃用户实现变现，具有可观的长期上行空间，尤其是在每用户收入仍有待开发的国际市场。该公司还强调，Pinterest 由 AI 驱动的视觉搜索/发现平台是其关键差异化优势，有助于持续提升用户参与度和变现增长。首予"买入"评级，目标价 30 美元。

VRSN: Wedbush raises PT to $351, expects domain guide raise with pricing + .web catalysts into 2027

VRSN：Wedbush 将目标价上调至 351 美元，预计域名增长指引将上调，定价调整及.web 将成为 2027 年前催化剂

Wedbush sees 2026 domain growth at ~6.4%, above current +5.2–6.0% guidance, after ~3.4M .com/.net net adds in 3Q and resilient renewals despite concerns around lower-quality adds. The next leg comes from the 7% .com price increase on Nov. 1, .web general availability expected in late 2027 and new security products; Wedbush also views AI agents as a net DNS demand accelerator rather than disintermediation risk. OP, PT $351 from $341.

Wedbush 预计，2026 年域名增长率为~6.4%，高于目前+5.2–6.0%的指引；此前第三季度.com/.net 净新增域名为~3.4M，尽管市场担忧新增域名质量偏低，续约表现仍具韧性。下一阶段增长将由 11 月 1 日.com 价格上调 7%、预计于 2027 年末开放注册的.web，以及新安全产品推动；Wedbush 还认为，AI 代理将净推动 DNS 需求加速增长，而非构成去中介化风险。维持"跑赢大盘"评级，目标价由 341 美元上调至 351 美元。

DKNG/FLUT: BNP says Cruz bill would be major positive for sportsbooks, but passage still looks unlikely near term

DKNG/FLUT：BNP 表示，Cruz 法案将对体育博彩运营商构成重大利好，但短期内通过的可能性仍不大

BNP says Sen. Ted Cruz's proposal to put sports prediction contracts under state gambling laws would materially benefit FLUT/DKNG/ENT by removing the lighter-regulated prediction-market advantage. But BNP sees low odds of passage for now given hurdles in Congress and Trump's support for federal prediction-market regulation; the more likely catalyst remains a Supreme Court resolution of conflicting federal appeals rulings, potentially around mid-2027.

BNP 表示，参议员特德·克鲁兹提出将体育预测合约纳入州赌博法律监管；若该提案通过，FLUT/DKNG/ENT 将显著受益，因为这将消除预测市场监管较宽松所带来的优势。不过，鉴于国会面临的障碍，以及特朗普支持联邦层面对预测市场进行监管，BNP 认为该提案目前通过的可能性较低。更有可能的催化剂仍是最高法院对相互冲突的联邦上诉法院裁决作出裁定，时间可能在 2027 年年中左右。

NEWS

DeepSeek: Low-cost model update narrows the performance gap – The Information

DeepSeek：低成本模型更新缩小性能差距——The Information

The Information reports DeepSeek's V4.1-Flash-1017 update outscored OpenAI's GPT5.6 Sol on Terminal-Bench 4.0. API output pricing remains $1.20 per million tokens at peak times and $0.60 off-peak, versus $20 for GPT5.6 Sol. Bloomberg reports DeepSeek says the update also completes tasks faster with shorter outputs.

据 The Information 报道，DeepSeek 的 V4.1-Flash-1017 更新在 Terminal-Bench 4.0 上的得分超过了 OpenAI 的 GPT5.6 Sol。API 输出价格在高峰时段仍为每百万个 token 1.20 美元，非高峰时段为 0.60 美元；相比之下，GPT5.6 Sol 的价格为 20 美元。据彭博社报道，DeepSeek 表示，此次更新还能更快完成任务，且输出内容更短。

Benchmarks	DeepSeek V4.1-Flash-1017	DeepSeek V4.1-Flash	Kimi K3	GLM 5.3	GPT 5.6-Sol	Claude Opus 5
HLE (w/o tools)	42.6/44.0*	36.8/39.1*	43.5	42.0*	44.5	**56.3**
Terminal-Bench 4.0	42.3	31.2	12.6	37.9	39.9	**51.8**
DeepSWE v1.1	**77.0**	74.2	67.5	66.9	73.0	74.0
ProgramBench	29.1	20.3	17.5	19.0	23.0	**37.0**

* denotes the text subset of HLE. Tests on Terminal-Bench 4.0 were conducted using the Claude Code framework, while DeepSWE was evaluated using the Mini-SWE-V2 framework; and ZeroBench-main was evaluated using Pass@5.

DELL: AI server backlog reaches $95B as memory stays tight in interview with Michael Dell – WSJ

DELL：AI 服务器积压订单达 950 亿美元，内存供应仍紧张——迈克尔·戴尔访谈——《华尔街日报》

WSJ reports Dell has $95B of AI server backorders, with Michael Dell identifying memory availability as the principal delivery bottleneck and expecting it to worsen next year. The company added 3,300 AI data center customers in three quarters, exceeding the 3,200 accumulated over the preceding eight quarters.

据《华尔街日报》报道，戴尔的 AI 服务器积压订单达 950 亿美元。迈克尔·戴尔指出，内存供应是交付的主要瓶颈，并预计这一问题明年会进一步加剧。该公司在三个季度内新增 3,300 家 AI 数据中心客户，超过此前八个季度累计新增的 3,200 家。

MU / Samsung / Memory: Capacity expansion remains concentrated in HBM – Chosun Biz

MU / 三星 / 内存：产能扩张仍集中于 HBM——Chosun Biz

Chosun Biz reports UBS expects Samsung's monthly DRAM wafer capacity to rise 17%, from 700,000 at end-2026 to 820,000 at end-2027. HBM capacity would increase from 170,000 to 260,000 wafers, while non-HBM capacity rises by only 27,000. UBS forecasts 2027 DRAM bit demand growth of 38.9%, versus 24.4% supply growth.

《朝鲜商业报》报道称，瑞银预计三星 DRAM 月度晶圆产能将增长 17%，从 2026 年底的 70 万片升至 2027 年底的 82 万片。HBM 产能将从 17 万片增至 26 万片，而非 HBM 产能仅增加 2.7 万片。瑞银预测，2027 年 DRAM 位元需求将增长 38.9%，供给将增长 24.4%。

CXMT: Profit turnaround and revenue surge fail to support shares – CNBC

CXMT：利润扭亏、营收大增仍未能提振股价——CNBC

CNBC reports CXMT expects first-nine-month net profit of RMB131–132.5B, reversing a RMB5.28B loss, and revenue of RMB265–270B. CXMT attributes the improvement to AI demand, DRAM shortages and higher prices. Its shares fell 7.8% Monday despite the forecast; Counterpoint puts its Q3 global DRAM revenue share at 10%, versus 5% a year earlier.

CNBC 报道称，CXMT 预计前九个月净利润为人民币 131 亿至 132.5 亿元，扭转此前人民币 52.8 亿元的亏损；营收预计为人民币 265 亿至 270 亿元。CXMT 将业绩改善归因于 AI 需求、DRAM 短缺及价格上涨。尽管发布上述业绩预期，该公司股价周一仍下跌 7.8%；Counterpoint 估算，CXMT 第三季度在全球 DRAM 营收中的占比为 10%，高于一年前的 5%。

NVDA / TSM / Memory: Samsung to use TSMC base dies for Nvidia memory – Reuters

NVDA / TSM / 存储：三星将为英伟达存储器采用台积电底层裸片——路透社

Reuters, citing Seoul Economic Daily, reports Samsung will use TSMC's 3nm process for Nvidia's custom NVHBM base dies. Nvidia has requested the same process from Samsung, SK Hynix and Micron, alongside sixth-generation DRAM core dies. Samsung accepted the requirements but plans to retain in-house manufacturing for standard HBM and other customers' custom products.

路透社援引《首尔经济日报》报道称，三星将采用台积电 3 纳米制程，为英伟达定制 NVHBM 底层裸片。英伟达已要求三星、SK 海力士和美光采用相同制程，同时配套第六代 DRAM 核心裸片。三星接受了相关要求，但计划继续自行生产标准 HBM 以及面向其他客户的定制产品。

SWKS: Starboard sees upside from Qorvo integration – Bloomberg

SWKS：Starboard 认为整合 Qorvo 将带来上涨空间——彭博社

Bloomberg reports Starboard, now a Skyworks shareholder through the Qorvo acquisition, sees the combined company as undervalued. It points to at least $500M of targeted annual cost savings within three years and management's 30–35% operating-margin goal within two to three years. Jeff Smith is expected to discuss the investment on October 20.

彭博社报道称，Starboard 通过收购 Qorvo 成为 Skyworks 股东后，认为合并后的公司估值偏低。Starboard 指出，公司目标是在三年内实现至少 5 亿美元的年度成本节约，管理层则力争在两至三年内将营业利润率提升至 30%—35%。预计 Jeff Smith 将于 10 月 20 日谈论这项投资。

ACN: Accenture weighs sale of Greater China operations – FT

ACN：埃森哲考虑出售大中华区业务——《金融时报》

The FT reports Accenture hired JPMorgan to review a potential sale of its Greater China business at a valuation of up to $1.5B, following unsolicited interest. Accenture may retain a significant minority stake. The unit includes mainland China, Hong Kong and Taiwan.

《金融时报》报道称，在收到未经请求的收购意向后，埃森哲已聘请摩根大通评估出售其大中华区业务的可能性，该业务估值最高可达 15 亿美元。埃森哲可能保留相当比例的少数股权。该业务涵盖中国大陆、香港和台湾。

Cybersecurity / AI: Agents breach more than 100 sites for roughly $5000 – Reuters

网络安全 / AI：AI 智能体攻破逾 100 个网站，花费约 5000 美元——路透社

Reuters reports a hacker used largely autonomous AI agents to attempt more than 1,200 website intrusions, compromising over 100 sites. Researcher NorForge estimates the campaign used roughly $5,000 of tokens, apparently mixing DeepSeek and Claude Code. Reuters independently identified affected sites tied to Deere, SharkNinja and Cummins.

路透社报道称，一名黑客利用基本自主运行的 AI 智能体，尝试入侵逾 1,200 个网站，并成功攻破 100 多个。研究机构 NorForge 估计，此次行动使用的令牌成本约为 5,000 美元，似乎混用了 DeepSeek 和 Claude Code。路透社独立确认，受影响网站与迪尔、SharkNinja 和康明斯有关。

AI Agents / Banks: Citi and Bank of America restrict account access – FT

AI 智能体 / 银行：花旗和美国银行限制账户访问权限——《金融时报》

The FT reports Citi and Bank of America have restricted third-party AI agents from accessing customer accounts, joining JPMorgan. Banks are seeking clarity on payment authorization and liability while raising concerns with the Federal Reserve that agents could shift deposits into higher-yielding accounts. Citi still permits limited read-only access through approved open-banking providers.

《金融时报》报道称，花旗和美国银行已限制第三方 AI 智能体访问客户账户，加入摩根大通的行列。各银行正寻求明确支付授权和责任归属，同时向美联储表达担忧，称智能体可能将存款转移至收益率更高的账户。花旗仍允许通过获批的开放银行服务提供商进行有限的只读访问。

TSM: Japan approves 3nm plan for second Kumamoto fab – Commercial Times

台积电：日本批准第二座熊本晶圆厂的 3 纳米计划——《工商时报》

Commercial Times reports Japan approved TSMC's revised second Kumamoto fab plan for subsidies, paving the way for Japan's first domestic 3nm production. Initial output is targeted for December 2028 at 6,000 wafers per month, replacing the earlier 48,000-wafer plan for older processes. Further expansion depends on additional Japanese support.

《商业时报》报道称，日本已批准台积电熊本第二晶圆厂修订方案，使其符合补贴条件，为日本首次在本土生产 3nm 芯片铺平道路。该厂计划于 2028 年 12 月开始投产，初期月产能为 6,000 片晶圆，取代此前采用较成熟制程、月产能 48,000 片晶圆的方案。后续扩产取决于日本政府是否提供额外支持。

SK Hynix / Solidigm: Korean regulator flags obstacle to US IPO – Reuters

SK 海力士 / Solidigm：韩国监管机构指出美国 IPO 面临障碍——路透社

Reuters reports South Korea's financial regulator said Solidigm's proposed US IPO could violate dual-listing restrictions and is awaiting an official interpretation. The rules require minority-shareholder consent before a subsidiary listing. Solidigm has been considering an IPO as early as 2027 at a valuation of up to $150B.

路透社报道称，韩国金融监管机构表示，Solidigm 拟议中的美国 IPO 可能违反双重上市限制，目前正在等待官方解释。相关规定要求子公司上市前须取得少数股东同意。Solidigm 一直在考虑最早于 2027 年进行 IPO，估值最高可达 1,500 亿美元。

Tenstorrent: AI chipmaker raises $1.5B at $6.2B valuation – Bloomberg

Tenstorrent：AI 芯片制造商融资 15 亿美元，估值达 62 亿美元——彭博社

Bloomberg reports Tenstorrent raised $1.5B at a $6.2B valuation, more than double its previous $2.6B valuation. Sandisk and Cadence Ventures joined the round. CEO Jim Keller said the company chose to remain independent after takeover discussions with Intel and Qualcomm, citing improved product performance, shipments and investor demand.

彭博社报道称，Tenstorrent 融资 15 亿美元，估值达 62 亿美元，是其此前 26 亿美元估值的两倍多。Sandisk 和 Cadence Ventures 参与了本轮融资。首席执行官 Jim Keller 表示，在与英特尔和高通进行收购谈判后，公司选择保持独立，理由是产品性能、出货量和投资者需求均有所改善。

TSLA: Appeals court overturns self-driving class certification – Reuters

TSLA：上诉法院撤销自动驾驶集体诉讼认证——路透社

Reuters reports a US appeals court overturned certification of California customer classes challenging Tesla's self-driving claims, finding too many individual differences in what buyers saw before purchasing. The decision prevents the grouped claims from proceeding together for now; the underlying false-advertising case remains pending.

路透社报道称，美国一家上诉法院撤销了对加州消费者集体诉讼的认证，该诉讼质疑特斯拉有关自动驾驶的宣传。法院认为，购车者在购买前看到的信息存在过多个体差异。目前，这一裁决阻止相关索赔以集体诉讼形式继续推进；底层的虚假广告诉讼仍待审理。

SPCX / Telecom: Mobile network costs loom as European carriers coordinate – Reuters / Bloomberg

SPCX / 电信：欧洲运营商协同布局之际，移动网络成本问题凸显——路透社 / 彭博社

Reuters reports SpaceX's roughly $8B spectrum purchase still leaves major terrestrial-network requirements; TD Cowen estimates nationwide construction would exceed $80B. Separately, Bloomberg reports Deutsche Telekom, Orange, Vodafone and Telefónica agreed to form a consortium to pursue satellite spectrum and direct-to-
