Mkt broadly boosted by Momentum + chasing in high velocity pockets (SPCX > 1m call options). Bartlett: Mag7 lagged which felt driven by increased competition concerns following SPCX SI results, rotational dynamics into SPCX, Cleveland checks weighing on GOOGL, possible source-of-funds trading into expected future issuance. Semis bounced but felt underwhelming (particularly coming off 10 of 11 sessions lower), despite positive news flow & constructive global tech px action overnight (SMCI +10% on positive pre). Our desk was NOT overly active today. Our floor was a 5 on a 1-10 scale in terms of overall activity levels, finishing +3% better to buy on still relatively muted notional. Asset Mgr flows finished ~flat with demand in Fins/Reits, industrials, and energy vs supply in utilities, Hcare, and tech. HFs finished small net buyers, driven by demand in tech, Hcare, and Fins vs supply in comm services.

市场主要受动量推动，并在高动能领域出现追涨（SPCX 超过 100 万份看涨期权）。Bartlett：Mag7 表现落后，感觉是受 SPCX 空头利益结果后竞争担忧加剧、资金轮动进入 SPCX、克利夫兰渠道检查拖累 GOOGL、以及可能为预期未来发行进行资金来源交易的影响。半导体反弹但感觉表现平平（尤其是此前 11 个交易日中有 10 日下跌之后），尽管有积极消息流且隔夜全球科技股价格走势建设性（SMCI 因积极盘前涨 10%）。我们交易台今天并不特别活跃。就整体活动水平而言，我们的场内活跃度为 1-10 分制中的 5 分，最终买盘好转 3%，但名义金额仍相对低迷。资产经理的持仓在 10 点 01 分时达到平衡状态：金融/房地产、工业及能源领域的需求较高，而公用事业、医疗保健和科技领域的供应则相对较多。对冲基金则表现为净买入者，其买入动力来自科技、医疗保健和金融领域的需求，而通信服务领域的供应则较多。

POST BELL: META +5%... Solid Q3 Rev beat, guiding Q4 $73-76bn nicely above $73.57bn. New class of stock coming Jan '27. **// TSLA (+) +4%...** 3Q deliveries were a clear beat and we already got that news at the beginning of October. Qualitative commentary seems more positive vs recent quarters. **// LRCX -7.5% ..** beat on quarter with F2Q GMs 52.4% vs cons ~52% and guides slightly above street // **IBM +6%..** (was +4% into print today) .. software revs accel to +9% y/y cc (vs +5% y/y cc last qtr) with a rebound in Transaction Processing revs

盘后快讯：META +5%……第三季度营收稳健超预期，第四季度指引为 730-760 亿美元，明显高于 735.7 亿美元。2027 年 1 月将推出新一类股票。// TSLA (+) +4%……第三季度交付量明显超预期，我们在 10 月初就已获知这一消息。定性评论相比近几个季度似乎更为积极。// LRCX -7.5%……季度业绩超预期，第二财季毛利率为 52.4%，市场共识为 52%，指引略高于华尔街预期 // IBM +6%……（今日盘前曾涨 4%）……软件营收按固定汇率同比加速至+9%（上季度按固定汇率同比为+5%），交易处理营收出现反弹

DERIVS: Fairly quiet day on the vol desk following VIX expiry this AM, with the street cleaner coming out of the print. Index vol caught a bid across the entire term structure, though a steady compression in skew dominated the narrative as the session progressed. Fixed strike vol was getting bid on the chase to the topside, which we haven't seen in a while. The most notable shift occurred flow wise as we finally saw buyers of short-dated upside in real size … $18m premium spent on both SPY Nov 800 calls and Dec 810 calls. With positioning increasingly defensive, the desk views right-tail hedges as historically cheap at current levels. Given that the S&P sits ~1.1% off its Oct 6th peak, adding convex insurance looks highly tactical here … SPY Nov 800 815 call spreads offer 8x payout. The S&P implied move for the rest of the week goes out at 78bps. (TY Shayna Peart)

衍生品：今早 VIX 到期后，波动率交易台相当平静，市场流动性在结算后逐渐恢复。指数波动率在整个期限结构上获得买盘，尽管随着交易推进，偏斜的持续压缩主导了叙事。固定执行价波动率在追逐上行过程中获得买盘，这是我们一段时间以来未曾见到的。资金流方面最显著的转变是，我们终于看到实际规模的短期上行买盘……SPY 11 月 800 看涨期权和 12 月 810 看涨期权合计花费 1800 万美元权利金。随着仓位日益防御化，交易台认为在当前水平下，右尾对冲从历史来看较为便宜。鉴于标准普尔指数目前比 10 月 6 日的峰值低了 1.1%，在此时买入具有凸性收益特性的保险产品显然是个明智的策略……SPY 11 月到期、执行价格为 800 至 815 点的看涨期权组合，其收益率为 8 倍。预计本周内标准普尔指数的波动幅度为 78 个基点。（TY Shayna Peart）
