Calm start to the week with a relief rally (NDX > SPX > RTY) in Tech that felt like a cessation of the high-velocity supply that was around much of last week. Our floor was a 3 on a 1-10 scale in terms of overall activity levels with Asset Mgr and HF overall flow skews finishing benign on muted volumes. We did see a similar flow tilt today with supply in Semis, primarily from LO community but much "milder" relative to what we saw back half of last week and not much real buying.

本周开局平静，科技股出现一轮缓解性反弹（纳斯达克 100 指数 > 标普 500 指数 > 罗素 2000 指数），盘面感觉上，上周大部分时间持续涌现的高速抛售压力似乎有所消退。以 1 至 10 分衡量整体活跃度，我们给出的评分为 3 分；在成交量偏低的情况下，资产管理机构和对冲基金的整体资金流向偏温和。今天资金流向也呈现类似倾向：半导体板块面临抛压，主要来自长线机构投资者群体（LO），但相较上周后半段明显“温和”许多，真正的买盘并不多。

Feedback from HF community points towards continued frustration around choppy backdrop / ongoing performance challenges. Callahan on TMT: the backdrop is different than it was in July as investors grapple with earnings, mid-terms s, rates/credit, ROIC, inflation, product momentum, L/P/S Constraints in 2028 et al. Focus shifts to EPS and whether the AI complex will be rewarded via share price performance and if it’s enough to curb the negative sentiment. AI earnings watch: META (wed), SPCX (tues), IBM (Wed), LRCX (wed), WDC (thurs) BE (thus), BX (thurs).

对冲基金群体的反馈显示，市场环境反复震荡、业绩持续承压，令投资者仍感到沮丧。Callahan 谈及 TMT 板块时表示，当前市场背景已不同于 7 月：投资者正努力应对财报、美国中期选举、利率/信贷、投入资本回报率（ROIC）、通胀、产品势头，以及 2028 年的 L/P/S 限制等因素。市场关注焦点转向每股收益（EPS），以及 AI 产业链能否通过股价表现获得回报、这种回报是否足以扭转负面情绪。AI 财报关注名单：META（周三）、SPCX（周二）、IBM（周三）、LRCX（周三）、WDC（周四）、BE（周四）、BX（周四）。

DERIVS: The vol market experienced a quiet session today, a sharp contrast to Friday’s hectic activity which saw VIX call option volume surge to its second-highest level in five years. Short-dated S&P implied vol and skew were sold out of the gates, with the skew compression holding firm throughout the day. Client conviction hit YTD lows, reflecting clear anxiety regarding the near-term outlook. Fixed strike vols did not react much throughout the day with ATM vol ultimately closing down small. As major indices began recovering from last week’s drawdown, the market shifted back into a pocket of long dealer gamma, a notable transition given that the five-day gamma decline we just witnessed was the largest in four years. Flow wise, the desk saw a slight tilt to index vol selling and very little appetite to chase upside. Ahead of this week’s earnings acceleration, we saw activity in tech, rolling up short-dated upside in GOOGL, AMZN, and SKHY. Notably, the QQQ Friday straddle looks cheap at 2%, capturing META earnings on Wednesday. The desk believes owning QQQ or META gamma offers a highly compelling risk/reward profile at these levels. 衍生品：今日波动率市场交投清淡，与周五的活跃行情形成鲜明对比；周五 VIX 看涨期权成交量飙升至五年来第二高水平。短期限标普隐含波动率和偏斜率开盘后遭到抛售，且偏斜率压缩全天保持稳固。客户信心降至年初至今低点，反映出市场对近期前景明显感到担忧。固定行权价波动率全天反应不大，最终平值波动率小幅收低。随着主要股指开始收复上周跌幅，市场重新进入做市商伽马敞口偏多的区间。鉴于此前五日伽马敞口降幅为四年来最大，这一转变尤为值得关注。从交易流来看，交易台观察到股指波动率卖盘略占上风，且追涨意愿很低。在本周财报行情升温之前，我们看到科技股相关交易活跃，交易者将 GOOGL、AMZN 和 SKHY 的短期限看涨头寸展期至更高行权价。值得注意的是，QQQ 周五到期跨式期权的隐含波动率仅为 2%，看起来较为便宜，且覆盖周三 META 财报。交易台认为，在当前价位买入 QQQ 或 META 伽马具有极具吸引力的风险回报特征。（TY Shayna Peart）
