TMTB Morning Wrap: SpaceX (SPCX) + Netflix (NFLX) recaps & the usual

TMTB 晨间综述：SpaceX（SPCX）与 Netflix（NFLX）的最新动态，以及常规内容。

TMT BREAKOUT
5 MINUTES AGO • PAID

Listen

Good morning. **QQQs +60bps / SPX+25bps** as better **SPCX +8%** earnings and commentary from musk, as well as better numbers from SMCI, has **semis +2%** early. Internet flattish after **NFLX -6%** missed even low expectations. SMCI numbers have **DELL/HPE +5%, DOCN +6%** on a Piper upgrade, and **Optical +6% (CRDO +7% / LITE +6%)** leading the way higher in semis. **GOOGL -1%** on weaker 3p ad checks.

早上好。QQQ 上涨 60 个基点/SPX 上涨 25 个基点，因 SPCX 财报好于预期上涨 8%及马斯克的评论，加上 SMCI 数据向好，半导体早盘上涨 2%。互联网板块持平，此前 NFLX 下跌 6%，连低预期都未达到。SMCI 的数据带动 DELL/HPE 上涨 5%，DOCN 因 Piper 上调评级上涨 6%，光通信板块上涨 6%（CRDO 上涨 7%/LITE 上涨 6%）领涨半导体。GOOGL 下跌 1%，因第三方广告数据走弱。

Asia mixed overnight although Korea was in the green: TPX +0.86%, NKY +0.85%, Hang Seng -0.9%, HSCEI -1.08%, SHCOMP -0.6%, Shenzhen -0.49%, Taiwan TAIEX +1.28%, Korea KOSPI +3.29%. Memory strong with **Samsung/Hynix +5-6%**

亚洲市场在夜间表现不一，韩国市场则呈现上涨态势：TPX 上涨 0.86%，NKY 上涨 0.85%，恒生指数下跌 0.9%，HSCEI 下跌 1.08%，上证指数下跌 0.6%，深证成指下跌 0.49%；台湾地区 TWSE 指数上涨 1.28%，韩国 KOSPI 指数则上涨 3.29%。内存芯片行业表现强劲，三星和海力士的股价分别上涨了 5-6%。

Another busy day with **META, LRCX, TSLA, TXN** and **IBM** prints on the docket this afternoon.

今天下午还有更多值得关注的消息：META、LRCX、TSLA、TXN 和 IBM 的股价表现都将被公布。

We'll start with earnings, the onto the usual. Let's get to it...

我们先从收益开始，按常规流程来。那我们开始吧.....

TMT Pre-mkt Movers/Shakers

EARNINGS

SPCX +8%: Better than expects as AI compute drives a broad beat; Q1 guide ~50% above Street, with funding needs rising

SPCX 上涨 8%：得益于人工智能计算领域的强劲发展，表现优于预期；第一季度业绩指引为 1001，比市场预期高出 50%，同时该公司的资金需求也在增加。

SPCX beat Q3 revenue by 14% and adjusted EBITDA by 30%, raised its compute deployment targets and guided Q1 well above Street, while the accelerating build pushed Q4 CapEx to $35–40B vs street at 21B

SPCX 的第三季度营收增长了 14%，调整后的 EBITDA 则增长了 30%。该公司还提高了服务器部署的目标，其对第一季度的业绩预期也远高于市场预期。此外，由于建设进度加快，其第四季度的资本支出将达到 350 亿至 400 亿美元，而市场预计仅为 210 亿美元。

Revenue grew 161% y/y to $14.58B (last q +92%) vs. Street $12.84B, with adjusted EBITDA of $8.81B vs. $6.80B and margins of 60.4% vs. 53.0%. Super Intelligence drove most of the upside as compute pricing moved above the previous $30–50/W range, supporting sub-one-year deployment paybacks. Q1 revenue guidance of $33–37B vs Street ~$23B, while mgmt now expects approximately 13GW of compute exiting 2027.

营收同比增长 161%至 145.8 亿美元（上季度增长 92%），高于华尔街预期的 128.4 亿美元，调整后 EBITDA 为 88.1 亿美元，高于预期的 68.0 亿美元，利润率为 60.4%，高于预期的 53.0%。超级智能业务推动了大部分超预期表现，因为算力定价已突破此前每瓦 30 至 50 美元的区间，支撑了不到一年的部署回本周期。第一季度营收指引为 330 亿至 370 亿美元，而华尔街预期为 230 亿美元，同时管理层目前预计到 2027 年底算力规模将达到约 13 吉瓦。

Some good quotes from Elon on the call... 更多一手研报请加微信：FCCNN88

埃隆在电话会议中说的一些精彩语录.....

Compute Build-Out Guide 计算配置指南

> “We are tracking to be able to bring roughly 200,000 GB300s online per month for every month for the remainder of this year, continuing that pace next year. With next year being primarily Rubin, very Rubin compute, at this point, I would say I am fairly confident of being able to bring an incremental 10 gigawatts of compute online in 2027. That would be in addition to the roughly 3 gigawatts, maybe 2.5 to 3 gigawatts that we will have online by the end of this year. Let me put it this way. **I would be surprised if we brought on less than 13 gigawatts of compute by the end of next year.** ... To make sure that that is not a constraint for our build-out, we are actually going to aim for an incremental 20 gigawatts of power cooling infrastructure next year.”
>
> **“我们预计，在今年剩余的时间里，每月可以投入运行约 20 万台 GB300 设备；明年也会保持这一速度。由于明年将主要使用 Rubin 处理器，因此我有信心在 2027 年再新增 10 吉瓦的运算能力。这还不包括今年底之前就已经投入使用的约 3 吉瓦，甚至可能是 2.5 到 3 吉瓦的运算能力。换句话说，如果到明年底时我们的运算能力仍低于 13 吉瓦，那我才会感到惊讶.....为避免这成为我们发展的障碍，我们计划明年再新增 20 吉瓦的散热基础设施。”**

Compute Pricing And Payback

计算定价与投资回收期

> “At current pricing, new compute deployments are generating a payback of less than a year. Pricing is currently tracking slightly above the high end of the $30 to $50 per watt range we were discussing just last quarter, which further supports the attractiveness of these terrestrial SI compute investments. ... If you look at, say, how are our short-term contracts renewing? Are they renewing at higher dollars per

watt or lower? **We see them renewing at higher dollars per watt, not lower dollars per watt.** ... It is not impossible that we will have a six-month payback period for compute next year."

"按照目前的定价，新部署的计算设施可在不到一年的时间内实现投资回报。目前的价格略高于上季度我们讨论过的每瓦 30 美元至 50 美元这一区间的高限，这进一步凸显了在这些地面计算设施上进行投资的吸引力……再来看看我们的短期合同情况：这些合同的费率是上升了还是下降了？我们的数据显示，合同费率是在上升，而非下降……明年，这些计算设施的投资回报期有可能缩短到 6 个月。"

3. Terrafab Timeline 3. Terrafab 时间线

"It is what we are aiming for internally, to make our first sort of test chip functional in approximately May or June of next year. That is just a kind of an SRAM chip or something that basically tests the line. That is at the research fab in Austin. **Our aspiration is to reach volume production around Q3 of 2028 at Terrafab, at Gibbons Creek, the main Terrafab location.** These are very aggressive dates. We are very appreciative of ASML and all of our other suppliers in accelerating equipment deliveries in order to achieve this outcome."

"我们的内部目标就是让第一种测试芯片在明年 5 月或 6 月左右能够正常运行。那其实是一种 SRAM 芯片，用于测试生产流程。该芯片将在奥斯汀的研究工厂中制造。我们的目标是到 2028 年第三季度时，在吉本斯克里克地区的 Terrafab 工厂实现大规模生产。这些时间表相当紧凑。我们非常感谢 ASML 以及所有其他供应商，他们加快了设备的供应速度，帮助我们实现这一目标。"

Musk said Tesla and SpaceX have formed committees to examine a potential combination.

马斯克表示，特斯拉和 SpaceX 已成立委员会，研究两者合并的可行性。

Feedback was largely positive with bulls happy with pricing power, execution, and near-term numbers although plenty of pushback on the 13GW # by end of next year as no one thinks that is a reasonable estimate (which is par for the course for Elon).

反馈总体积极：多头们对产品的定价能力、生产表现以及短期业绩表示满意；不过，对于“明年底前达到 13 吉瓦的产能”这一目标，许多人持反对意见，认为这一数值并不合理（这对埃隆来说倒是很常见的情况）。

Some good bull and bear takes from the earnings thread last night in Slack:

昨晚在 Slack 的盈利讨论帖中，有一些不错的看多与看空观点：

Bulls:

“If you look at SpaceX’s results, compute pricing appears to be holding up very well. Why isn’t that bullish? Compute capacity in its Superintelligence business grew by less than 30% quarter over quarter, from 1.4 GW to 1.7 GW, yet revenue increased by a full 200%.”

“如果看看 SpaceX 的业绩，就会发现其计算服务业务的表现相当不错。这为何不能被视为利好信号呢？该公司在‘超级智能’业务领域的计算能力环比增长不足 30%，从 1.4 吉瓦上升到了 1.7 吉瓦，但营收却增长了 200%。”

“Given the surging prices SpaceX is paying for Nvidia GPUs, I think it’s a bit of a stretch to expect SpaceX to dump its prices later on.”

“鉴于 SpaceX 为购买 Nvidia GPU 所支付的昂贵价格，我觉得期望它日后能降低价格未免有些不现实。”

“plug in 7GW. numbers still look great!”

“接入 7 吉瓦的电力，各项数据依然表现优异！”

“Market is already heavily discounting his claims though.. I don’t think we’re pricing anywhere near 13GW fully up and running at spot rates by end of next year”

“市场已经对他的说法给出了极低的估值……我认为，到明年底，即便所有设施都投入运营，其发电量也远达不到 13 吉瓦的水平。”

“Has scaled colossus faster than anyone else. He’s smart to not tell you who the customers are vs Oracle tied to one customer.”

“他的发展速度比任何人都快。他很聪明，没有告诉你客户是谁，而甲骨文则依赖单一客户。”

“Cowen DC call today said that SPCX is focusing their compute build in SE Asia where there is plenty of power, build costs are 50% of USA, and sites can be built in 6-9 months”

“Cowen DC 今天表示，SPCX 正在东南亚建设数据中心，因为那里电力供应充足，建设成本仅为美国的 50%，而且 6 到 9 个月就能建成。”

“The guy has $3.5T in market cap and a 20 year track record of making money appear on command...”

“那家公司的市值高达 3.5 万亿美元，而且 20 年来一直能够随心所欲地创造利润……”

“SPCX as natural consolidator of neos given his cost of capital relative to peers”

“鉴于其资本成本低于同行，SPCX 堪称新能源领域的天然整合者。”

“arguably spcx has 1) the optionality of starship at $200 per kg unlocking many use cases, 2) starlink getting tens and possibly hundreds of billions of dollars of recurring revs and 3) if ai goes south, xai can gain share with probably the cheapest token cost out there”

可以说，SPCX 具有以下优势：1）“星舰”技术意味着每公斤 200 美元的成本，这为该技术带来了诸多应用可能；2）“星链”项目能够带来数千亿美元级的持续收入；3）如果人工智能领域出现问题，XAI 凭借其极低的代币成本，有望抢占更多市场份额。

“i dunno about 500b-1T, that’s for later. you can’t prove that is wrong right now ... next few months look FIRE”

“我不确定是 5000 亿到 1 万亿左右，那都是以后的事了。目前还无法证明这个数字是错误的……接下来的几个月，情况应该会很不错。”

Bears

“Even discounting for the school of Elonism, these numbers are wild. The 13GW. The $500b-$1trn. All of it.”

“即便考虑到埃隆主义的影响，这些数字也依然高得离谱。13 吉瓦的发电量，5000 亿美元到 1 万亿美元的花费，全都是如此。”

“Does anyone take this $500b arr guide seriously? iphone sales + entire services biz

is $300b (approx). we adding that much rev in 1 year lmao?"

"真的有人会把这份价值 5000 亿美元的预测当真吗？iPhone 的销售额加上相关服务业务的收入加起来也就 3000 亿美元左右而已。想在一年内就创造出这么多的营收？笑死。"

"Elon says he will guarantee 10 GW, claims he could do 20 GW, will monetize them all >$50/w, end '27 at $1 trn ARR. Prob ends up doing <5 GW and $30/W blended."

埃隆表示自己能够保证提供 10 吉瓦的电力供应，声称还能达到 20 吉瓦；他希望将所有产生的电力都以每瓦 50 美元以上的价格出售，到 2027 年时实现 1 万亿美元的年度营收。但实际上，他可能只能提供不到 5 吉瓦的电力，且电力售价也仅为每瓦 30 美元左右。

"1. Probably wont be built, 2. If it is, that wont be the revenue. If 1 does happen, could be ugly because of 2."

"1. 很可能不会建成；2. 即使建成了，也不会带来收益。如果第 1 点真的发生了，由于第 2 点的原因，情况可能会很糟糕。"

"Assembling 300 MW with trucks parked outside pumping NG in is an amazing feat. Doing it at 30x the scale is crazy talk. That call yesterday was Alice in Wonderland. ... delivering 5-7 GW would be an amazing feat, forget 13GW (!)"

"用卡车将天然气运送到现场，从而组装出 300 兆瓦的发电设施，这已经是一项了不起的成就。要实现 30 倍规模的发电，那简直是不可能完成的任务。昨天的那个提议简直就像《爱丽丝梦游仙境》里的情节……能够实现 5-7 吉瓦的发电量就已经很了不起了，更别提 13 吉瓦了！"

"now he needs to find $300 to $500bn of capital to execute - putting aside the operational hurdles"

"现在，他需要筹集 3000 亿到 5000 亿美元的资本来实施这项计划——先不考虑运营上会遇到的各种难题。"

"WHO IS THE CUSTOMER MAN? How can we not care about the answer to this question...."

"那个客户经理是谁？我们怎能不对这个问题的答案感兴趣呢……"

"there is no way they can use 13GW if there's not an external buyer ... As for Grok, they can't even use their compute as is now lol, they are renting it out."

“如果没有外部买家，他们根本无法使用 13 吉瓦的算力……至于 Grok，他们现在甚至都无法自行使用自己的计算资源，只能将其出租出去。”

“Elon is attempting to build all this compute to rent it at SPOT rates, presumably without any lock-in at all. If prices fall sharply, he’s left holding the bag. … we have Oracle trying to make 13B/GW/year, whereas we have Mr. Elon claiming he can make 50B/GW/year.”

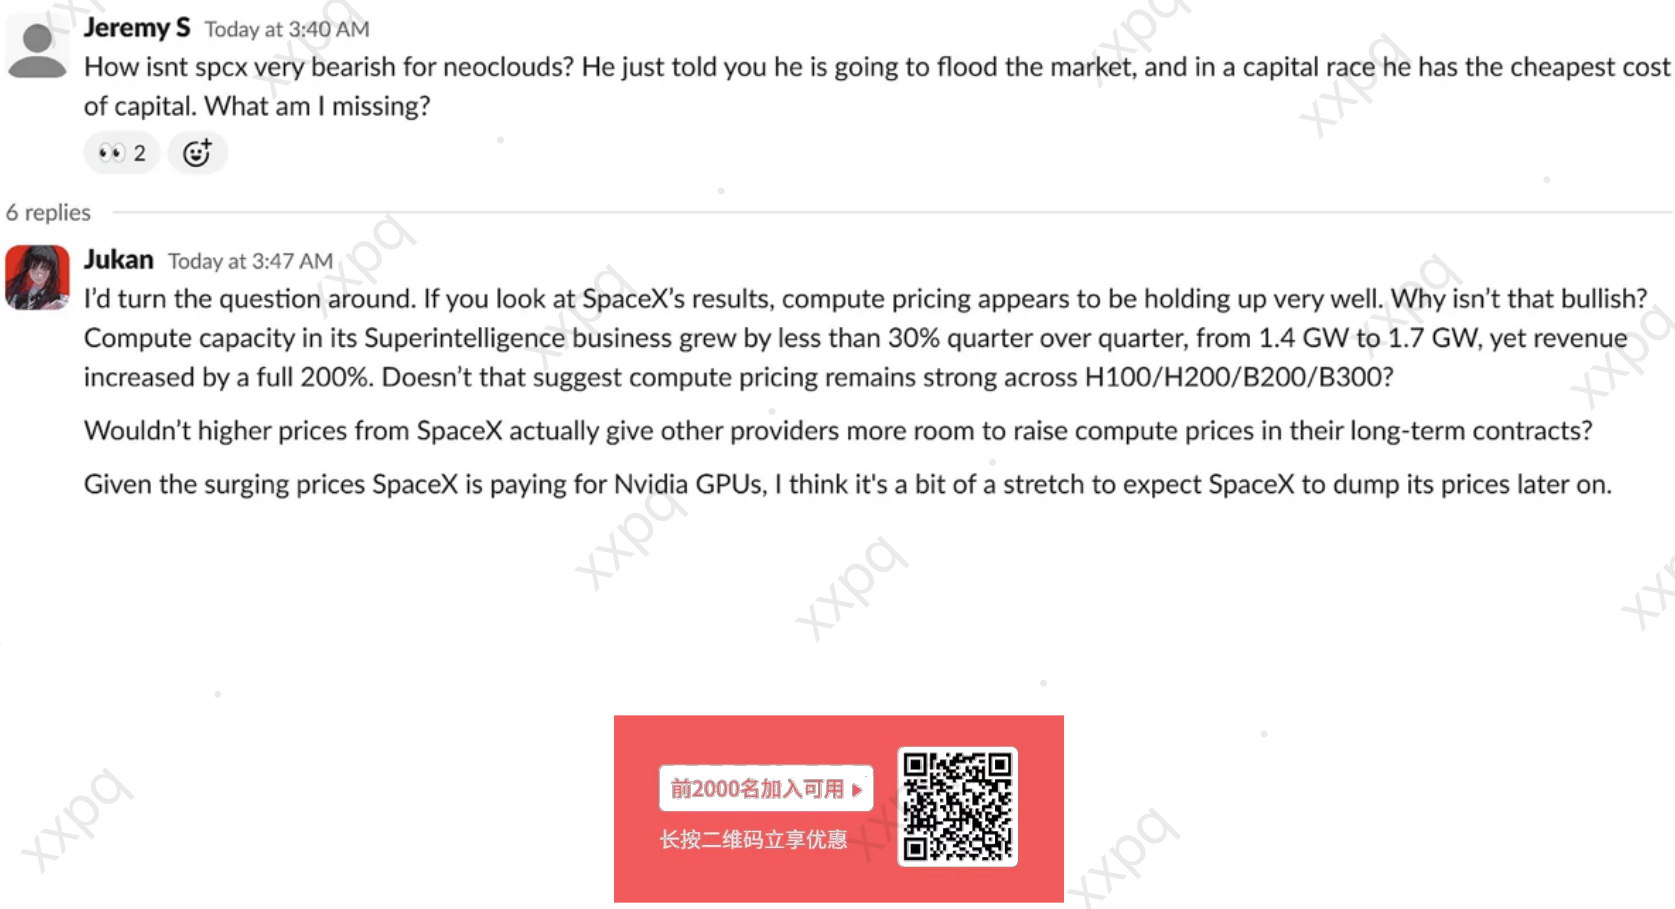

“埃隆试图建造大量计算资源，然后以即时价格将其出租，而且显然不会要求客户签订任何长期合同。如果价格大幅下跌，他就会面临损失……而甲骨文的目标是实现每年 130 亿吉瓦时的处理能力，而埃隆则声称自己能够达到每年 500 亿吉瓦时的处理能力。”

“Liquidity for locked up shares…1.3bn shares eligible for sale off lockup T+2 for Thursday October 22nd”

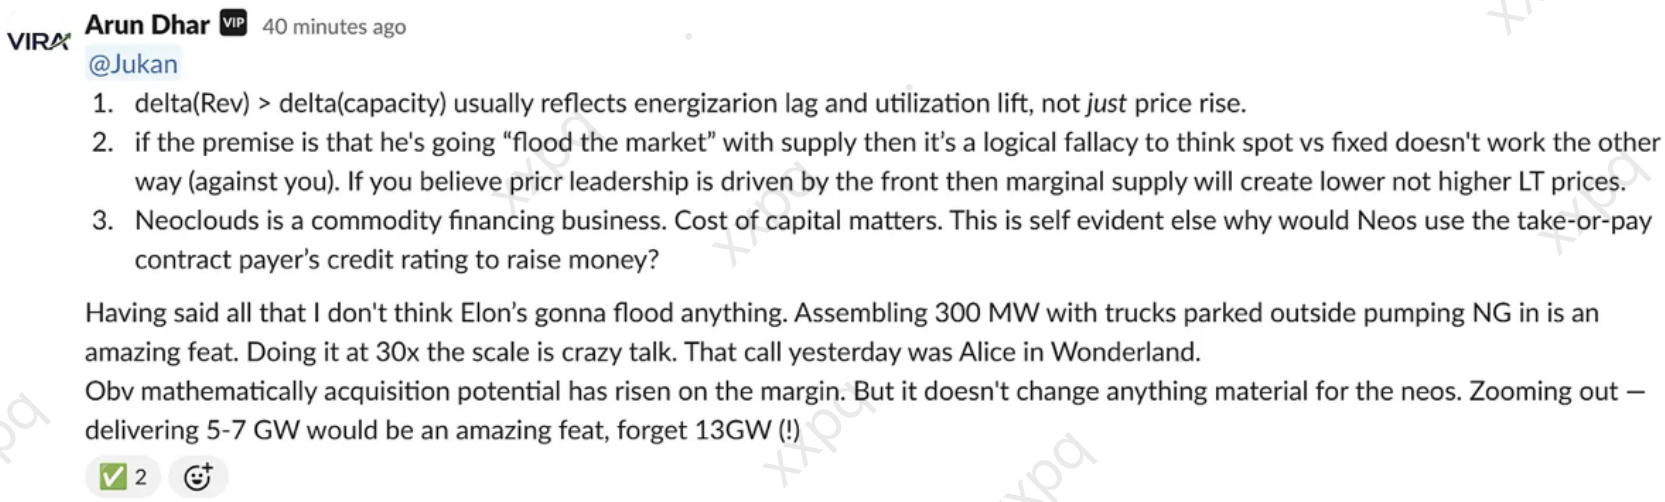

“已锁定股份的流动性……共有 13 亿股股份可在 10 月 22 日，即周四的 T+2 日后进行出售。”

Some good discussion on Slack [here](#) whether this is good or bad for Neoclouds:

在 Slack 上有一些不错的讨论，探讨这对 Neoclouds 来说究竟是利还是弊：

前2000名加入可用 ▸
长按二维码立享优惠

Key Takeaways

- **AI demand.** Super Intelligence revenue reached $7.56B, +830% y/y (last q +248%) and +195% q/q, vs. Street $6.47B. Higher-margin cloud agreements drove adjusted EBITDA to $4.95B vs. $3.97B, at a 65.5% margin. The acceleration extended beyond the acquisition contribution: solutions and infrastructure revenue grew approximately 192% q/q excluding Cursor's $608M contribution. Mgmt described demand from hyperscalers and smaller customers as several times available capacity.
- **Compute ramp.** Nameplate compute ended Q3 at 1.7GW vs. Street 1.75GW, but mgmt expects approximately 2.2GW by October-end and 2.5–3.0GW by year-end, up from the prior >2GW target. For 2027, mgmt expressed high confidence in adding approximately 10GW, reaching roughly 13GW total vs. Street ~6.1GW. The separate ambition to add 20GW of power and cooling infrastructure provides capacity ahead of GPU deployment; it should not be treated as 20GW of operational compute.
- **Power advantage.** Mgmt sees power, cooling and electrical infrastructure as the principal deployment constraints. Applying rocket-engine casting capabilities to turbine blades and vanes could shorten power-delivery timelines by 12–18 months. Deployment is running toward approximately 200,000–220,000 GB300s monthly through year-end, with the pace expected to continue or accelerate in 2027.

  在能源供应方面具有优势。管理层认为，能源供应、冷却系统以及电力基础设施是影响设备部署的主要障碍。如果能够将火箭发动机制造技术应用于涡轮叶片和导向叶的制造中，那么就能将能源供应的时间缩短 12 到 18 个月。到今年底，每月的 GB300 设备安装量预计可达 20 万到 22 万台，而 2027 年这一速度还可能会继续提升或加快。

- **Pricing.** New compute pricing is slightly above $50/W in annualized revenue, exceeding the high end of the previous $30–50/W range. Short-duration

contracts are renewing at higher prices, and mgmt cited older H100s renting above their original rates. New deployments are generating paybacks below one year; six-month paybacks in 2027 were presented as a possibility. T

定价方面，新的计算服务成本按年计算的话约为 50 美元/瓦时，这一数值高于此前的 30–50 美元/瓦时范围的上限。短期合同的续签价格也更高，而管理层指出，那些较旧的 H100 芯片的租赁费用也高于原先的定价。新部署的项目可在一年以内实现回本；有预测称，到 2027 年时，这些项目甚至可以在六个月内实现回本。

- **Revenue visibility.** The $33–37B Q1 guide implies approximately $140B of annualized revenue at the midpoint, already above pre-results FY27 Street of roughly $117B before further growth through the year. Backlog increased to $63B from $47.5B, including $17.5B of deferred revenue, with approximately $42B expected to convert within 12 months. Mgmt reiterated the $100B December annualized-revenue target and outlined a $500B–$1T exit-2027 ambition.
- **Internal monetization.** Mgmt's intended compute allocation is approximately 50% internal and 50% external, with flexibility to shift monthly. Illustratively, 13GW with half rented at $50/W produces $325B of annualized rental revenue before utilization adjustments. Reaching the broader $500B–$1T ambition therefore requires substantial monetization of internally consumed compute, contributions from other businesses, higher pricing or additional capacity. Applying external rental economics to the entire fleet overstates visibility.

内部资源变现。管理层计划将计算资源中的 50%用于内部使用，50%用于外部服务，且这一比例可每月进行调整。举例来说，如果有 13 吉瓦的计算能力，其中一半以 50 美元/瓦特的价格出租，那么在考虑其他因素之前，每年的租金收入约为 3250 亿美元。因此，要实现 5000 亿至 1 万亿美元的营收目标，就需要充分挖掘内部计算资源的价值，同时依靠其他业务带来的收入、提高价格或增加可用容量。若将外部租赁模式应用于所有计算资源，将会高估实际收益。

- **Applications.** Grok Bot reached approximately 800,000 paid weekly users in early October, more than doubling over the preceding month, with B2B the fastest-growing category. Enterprise customers above $1M in annualized revenue increased approximately 50% q/q on a pro forma basis including Cursor. The combined Grok/Grok Bot/Cursor/X Premium subscription supports cross-selling, with wider enterprise deployment expected within weeks. A 440,000-system Vera Rubin training cluster is targeted by end-Q2'27 to improve Grok's competitiveness.

前2000名加入可用 ▸
长按二维码立享优惠

应用方面：截至 10 月初，Grok Bot 的每周付费用户数已达到约 80 万，这一数字是上个月的两倍多，其中 B2B 领域的发展速度最快。包括 Cursor 在内的、年营收超过 100 万美元的企业客户数量环比增长了约 50%。Grok、Grok Bot、Cursor 及 X Premium 这几种订阅服务可以相互搭配销售，预计在未来几周内就能有更多企业开始使用这些产品。到 2027 年第二季度末，计划搭建由 44 万台系统组成的 Vera Rubin 训练集群，以此提升 Grok 的竞争力。

- **Capital requirements.** Q3 operating cash flow of $9.63B funded approximately half of $19.59B in CapEx, leaving FCF at negative $9.96B. Q4 CapEx rises to $35–40B, approximately 77% above Street at the midpoint and 91% above Q3. Mgmt pointed to operating cash flow, debt markets and vendor/customer partnerships while emphasizing preservation of its investment-grade rating.

资本需求方面：第三季度的运营现金流为 96.3 亿美元，仅能覆盖 195.9 亿美元资本支出中的一半，因此自由现金流为负 99.6 亿美元。第四季度的资本支出预计将在 350 亿至 400 亿美元之间，这一数值比市场预期高出约 77%，也高于第三季度的资本支出水平。管理层表示，将依靠运营现金流、债务市场状况以及与供应商和客户的合作关系来维持公司的投资级评级。

- **Margin quality.** Q3's 60.4% adjusted EBITDA margin vs. Street 53.0% benefited from favorable customer mix and one-time items. Connectivity gross margin included approximately 300bps of one-time benefit, primarily tariff refunds; excluding one-offs, segment adjusted EBITDA margin expanded approximately 200bps y/y. Mgmt expects Q4 consolidated gross margin to move closer to Q2's 55.3%, compared with Q3's 62.4% and pre-results Street near 63%.

利润率状况。由于客户结构较为优质，再加上一些一次性收益的推动，第三季度的调整后 EBITDA 利润率为 60.4%，而市场预期为 53.0%。在连接业务方面，约有 300 个基点的额外收益，主要来自费用返还；如果剔除这些一次性因素，该业务的调整后 EBITDA 利润率同比上升了约 200 个基点。管理层预计，第四季度的综合利润率将会接近第二季度的 55.3%，而第三季度的这一比例为 62.4%，此前市场预期则约为 63%。

- **Starlink.** Connectivity revenue grew 69.5% y/y to $5.25B (last q +65.8%) vs. Street $4.92B, with adjusted EBITDA of $3.50B vs. $2.94B. Consumer subscribers reached 13.6M vs. Street 14.3M, with 1.6M net adds. ARPU of $69 vs. Street $67, up 5% q/q but down from $83 a year ago, offset the subscriber shortfall through a more favorable geographic mix. Increased V5 kit production and holiday channel inventory should support Q4 activations.
- **Enterprise connectivity.** Enterprise and government revenue grew approximately

91% y/y to $2.1B, following 108% growth last quarter, supported by Starshield and aviation. Aviation contracts now cover roughly 12,000 aircraft, approximately one-quarter of the addressable fleet. Production capacity has quadrupled since the start of the year and is expected to double again by year-end, supporting faster installations in 2027. Mgmt continues to expect enterprise and government revenue eventually to exceed consumer connectivity revenue.

企业业务方面，得益于 Starshield 及航空领域的业务发展，企业和政府领域的收入同比增长了约 91%，达到 21 亿美元。上一季度该领域的收入增长率则为 108%。目前，航空领域的业务涵盖了大约 12,000 架飞机，约占所有需要服务飞机的四分之一。自今年年初以来，公司的生产能力已经提升了四倍，预计到年底还将再翻一番，这将为 2027 年的更快发展提供支持。管理层预计，企业的收入和政府领域的收入最终将会超过面向消费者的业务所带来的收入。

- **Starship.** Space revenue of $1.77B, +6% y/y (last q +29%), beat Street $1.46B on favorable mission mix; adjusted EBITDA of $357M beat $115M. Flight 14 deployed operational V3 satellites with bandwidth equivalent to approximately 10 Falcon 9 launches despite being only partially loaded. Flight 15 in November will attempt catches of both stages, followed by second-stage reflight and orbital refueling milestones in early 2027. Weekly launches are targeted during 1H27 and at least twice weekly by year-end.
- **Mobile expansion.** Starlink Mobile surpassed 22M monthly users, +37% q/q. Mobile V2 deployment begins in 2027, with U.S. service targeted for early 2028. The architecture combines satellites, Wi-Fi, mid-band spectrum, 800MHz spectrum for building penetration and terrestrial radios using existing installations. A fuller strategy presentation could clarify network costs and competitive positioning. Separately, broadband users may begin seeing meaningful V3 benefits with a few hundred satellites by mid-2027, versus the previous framing of approximately 1,000.
- **Terafab.** The first functional test chip is targeted for May/June 2027, with volume production around Q3'28 on an explicitly aggressive timetable. Supplier equipment deliveries are progressing, but EUV orders were not explicitly confirmed.

Terafab。首块可投入使用的测试芯片预计将在 2027 年 5 月或 6 月问世，而批量生产则计划在 2028 年第三季度开始，时间表相当紧凑。供应商的设备供应正在按计划进行，不过 EUV 相关设备的订单尚未得到确认。

- **TSLA combination.** Both companies have formed special committees, with Musk recused. No transaction terms have been agreed. Approval would require support

from at least 50% of all TSLA shares, including shares that do not vote.

特斯拉与这家公司的合并事宜。双方均已成立专项委员会，不过马斯克并未参与该委员会的决策。目前尚未就交易条款达成任何协议。要使该合并方案获得通过，需要至少 50%的特斯拉股份支持，其中包括那些没有投票权的股份。

NFLX -6%: Ads reset and softer Q4 guide keep the growth & engagement debate alive despite an EPS beat

NFLX 下跌 6%：广告业务表现不佳，加之第四季度业绩预期下调，尽管每股收益仍超出预期，但关于该公司增长前景及用户粘性的讨论依然持续。

Overall, weaker numbers and feedback largely negative although the main pushback from both bears and bulls (not many out there right now), was how much downside is left giving stock under 20x, but bears still in control here as investors coming away cautious on how the initial CY27 guide will look like (street at LDD). Remains unexciting for us both ways here.

总体来看，各项数据表现不佳，市场反馈也以负面为主。虽然目前看多和看空的力量都并不强，但双方最关心的问题仍是：股价在 20 倍市盈率以下时，还有多大的下跌空间。不过目前仍是以看空势力占上风，因为投资者对 2027 财年的业绩预期持谨慎态度。对我们来说，无论哪种情况都缺乏吸引力。

Some feedback from the Slack earnings thread last night:

昨晚在 Slack 上的财报讨论帖中收到的一些反馈：

Bulls

“Only bright spot is that I can convince myself that this is probably a bottom for them.”

“唯一的亮点是，我可以说服自己：这很可能是他们的底部。”

“Fair to say not bad enough for this to bleed another 20% this q.”

可以说，情况还不算太糟，本季度应该不会再出现 20%的跌幅了。

“UCAN better than feared is the only highlight in my view.”

在我看来，唯一值得称道的一点就是：UCAN 比预想的要好。

“Head count cut a good indication of them trying to rightsize their financial model to please the GARP folks”

“员工人数的削减很能说明他们在努力调整自身的财务模式，以取悦 GARP 的那些人。”

“From here,nflx is more long than short. They are trying to make a turn around. With so many eyeballs, their ad quality is pathetic.”

“从目前来看，NFLX 的处境更像是处于劣势。他们正在努力扭转局面。但由于有太多人关注他们，其广告的质量实在糟糕。”

“I’ve been short since before last print so my caution is to the upside”

“从上一次打印之前开始，我的库存就一直处于较低水平，因此我更倾向于看涨。”

Bears

“I’m trying to find any silver lining in this release but can’t.”

“我试图从这次发布中找到一些积极的一面，但找不到。”

“Blaming slow ad tech roll out for rev miss sad”

“将业绩不佳归咎于广告技术推广缓慢，实在可悲”

“I would love for it to be the bottom. But the ad revs is the growth engine and if they can’t monetize that then they’re selling their content for $8/sub and street numbers need to be lowered.”

“我希望能将其设为最低价。但广告收入才是推动发展的动力；如果他们无法通过广告盈利，那就只能以 8 美元/月的价格出售内容了，而价格还得进一步降低。”

“Funny how checks on ads was the only positive that came up during preview, which turned out to be false”

有趣的是，在预览阶段唯一被认定为正面的点就是对广告的审核，结果那其实也是错误的。

“Saying ppl reacting to px increases same as before so engagement is healthy pretty entitled”

“说人们对 PX 的反应和以前一样，因此参与度依然良好，这种说法未免太自大了。”

“They had an opportunity to take their medicine and reset expectations but they’re sticking to their DD revenue growth with margin expansion into the outyears, stock is dead money at best here until next Q”

“他们本有机会通过服药来调整预期，但他们仍坚持认为未来几年公司的营收会持续增长，利润率也会上升；在下一个季度之前，这支股票最多只能算是一文不值的废纸罢了。”

“Idk if it’s a bottom yet. What’s stopping multiple from continuing to derate from here”

“还不确定它是否已经处于底部。有什么因素能阻止它继续下跌呢？”

“>20x Fwd multiple not really defensible in a slowing top line that is increasingly P led, not Q”

“在营收增长放缓、且驱动因素越来越偏向于利润而非销售额的背景下，20 倍以上的预期市盈率实在难以成立。”

“GTA6 could be even a headwind into next year”

“GTA6 甚至可能成为明年发展的阻碍。”

“re Sports rights - Full circle. becoming programmed TV i.e what they were disrupting a decade ago.”

“体育转播权——又回到了原点。变成了按固定时间播放的电视节目，也就是他们十年前试图打破的那种模式。”

The #s:

Q3 revenue of $12.87B, +11.8% y/y (last q +13.4%), met Street at $12.87B and EPS

beat at $0.87 vs. $0.82, but Q4 revenue/EPS guidance of $13.44B/$0.67 missed Street at ~$13.52B/$0.73 and bogeys which were a little higher. UCAN was ok as 3p had pointed to, but ROW was main drag on #s.

第三季度营收为 128.7 亿美元，同比增长 11.8%（上一季度为 13.4%），与市场预期一致；每股收益则为 0.87 美元，高于预期的 0.82 美元。不过，对于第四季度的营收和每股收益，其预测值分别为 134.4 亿美元和 0.67 美元，均低于市场预期的 135.2 亿美元和 0.73 美元，表现较差。正如分析师们所预料的那样，UCAN 业务表现尚可，但其他业务板块的表现则拖累了整体业绩。

The main disappointment was the FY26 advertising reset to ~$2.7B, +80%+, from ~$3B previously and vs. Street at ~$3.07B, reflecting delayed product launches and partner integrations. Stronger subscriptions cushioned the impact, with FY26 revenue now ~$51.1B vs. Street at ~$51.2B and the prior $51.0–51.4B range; the 31.5% operating-margin target held. Q3's profit beat benefited from expense timing, while Q4's 26.0% margin guide includes ~120bps of restructuring costs, implying ~27.2% excluding those costs vs. Street at 27.6%. Improved churn and healthy pricing was one thing bulls could hold on to, but bulls need better US content execution and delivery against the ad roadmap to restore confidence in durable dd growth.

Key Takeaways

- **Growth.** Q4 revenue guidance implies +11.5% y/y vs. Street at ~12.1–12.2% and buyside bogey of +12.6%. FX-neutral growth is expected to hold around 11%, following 11% in Q3 and 12% in Q2. The subscription business remains healthy, but the guide offers little evidence of an imminent acceleration.

  增长方面：第四季度的营收预期为同比增长 11.5%，而市场普遍预计这一比例为 10.01%至 12.2%，另有分析认为其增速将为 12.6%。在剔除汇率因素的影响后，公司的增长速度应仍保持在 11%左右，与第二季度的 12%以及第三季度的 11%水平相当。订阅业务表现良好，但目前的预测数据并未显示出该业务即将迎来更快发展的迹象。

- **Advertising.** The ~$300M reduction in FY26 ads is the clearest incremental negative. Mgmt attributed the shortfall to delayed capabilities and partner integrations, while describing advertiser demand as strong and the advertiser base as expanding. Preserving NFLX's first-party data advantage is contributing to integration complexity.

广告业务方面，2026 财年的广告支出减少了~$300 百万，这是最明显的负面变动。管理层将这一下降归因于相关功能的开发进度延迟以及与合作伙伴的整合问题，同时指出广告主的需求依然强劲，且广告主的数量也在不断增加。不过，NFLX 在自有数据方面的优势反而增加了整合的难度。

- **2027 ads.** Street estimates around $5.2–5.3B now require roughly 93–96% growth from the lowered ~$2.7B base. That is a demanding hurdle after this year's execution miss. A ~$4B outcome would still represent roughly 48% growth, yet leave advertising approximately $1.2–1.3B below those expectations.

2027 年的广告支出预计在 52 亿至 53 亿美元左右。以 1001#$27 亿美元的较低基数计算，需要实现 93%至 96%的增长率。鉴于今年的目标未能达成，这一要求实在十分艰巨。即便能达到 1002#$40 亿美元的水平，也只能实现约 48%的增长率，届时广告支出仍会比预期少 12 亿至 13 亿美元左右。

- **Ad roadmap.** US upfront commitments nearly doubled, providing evidence of advertiser interest. Near-term execution milestones include TTD audience targeting in November, broader programmatic buying, expanded measurement, and a new NFLX Pixel and upgraded Conversion API supporting more than 20 lower-funnel conversion events. Partnerships with MELI in LATAM and Adform in EMEA broaden access to demand. These capabilities should improve targeting, attribution and conversion measurement as they become available.

根据规划，美国市场的前期投入几乎翻了一番，这充分体现了广告主们的兴趣。短期内的实施目标包括：11 月实现针对目标受众的精准定位、扩大程序化购买规模、完善数据统计功能，同时推出新的 NFLX 像素标签以及升级后的转化 API，以便能够追踪 20 种以上的转化事件。通过与拉丁美洲地区的 MELI 以及欧洲、中东和非洲地区的 Adform 建立合作关系，可以进一步拓展市场机会。随着这些功能的逐步到位，目标定位、归因分析以及转化率统计的精度都将得到提升。

- **Monetization.** Combined subscription-plus-ad revenue per member remains below the standard ad-free tier, although the gap is narrowing. Improving fill rates, measurement and targeting provides a multiyear opportunity; continued ad-tier membership growth simultaneously adds inventory that must be monetized. Expansion into 15 additional countries in 2027 adds another growth avenue, with the first group launching in March. Mgmt provided neither the current ARM gap nor a date for reaching parity.

盈利模式方面，每位用户的订阅费与广告收入之和仍低于无广告版本的收费标准，不过这一差距正在逐渐缩小。通过提升广告展示率、优化数据统计机制以及改进目标定位，可以创造长期的发展机会；同时，随着订阅用户数量的增加，也需要更多广告资源来实现盈利。2027 年，该服务还将扩展到另外 15 个国家，首批国家将于 3 月开始提供服务。管理层尚未透露目前两者之间的差距大小，也未给出实现平等水平的预计时间。

- **Pricing.** Global and US churn improved y/y and was better than forecast despite recent price increases. Member responses remained consistent with previous pricing cycles. This is the strongest evidence against an immediate deterioration in the franchise: customers continue to accept higher prices even while viewing growth is under scrutiny.

定价方面：尽管近期有价格上涨，但全球及美国的客户流失率仍呈同比下降趋势，且好于预期。会员们的反应也与之前的定价周期时一致。这充分说明该业务模式并未立即出现恶化——即便增长前景面临质疑，客户们依然愿意接受更高的价格。

- **Regional mix.** UCAN growth accelerated to 11% from 10%, benefiting from the first full quarter of the March US price increase. International FX-neutral growth slowed: EMEA to 9% from 11%, LATAM to 12% from 16%, and APAC to 15% from 18%. India was the counterexample, with viewing hours up 24%, viewing per member also increasing, and revenue growing nearly 20%. Local content can still generate meaningful growth, although that does not establish the timing of a US recovery.

各地区的发展状况各不相同。得益于 3 月美国市场首次出现价格上调，UCAN 的增长速度从 10%上升至 11%。而那些不受汇率影响的地区，其增长速度则有所放缓：EMEA 地区的增长率为 9%，低于之前的 11%；LATAM 地区的增长率为 12%，低于之前的 16%；APAC 地区的增长率为 15%，低于之前的 18%。印度则是个例外，其节目观看时间增长了 24%，每位用户的观看次数也在增加，营收更是增长了近 20%。本地内容依然能够推动业务发展，不过这并不能预示美国市场的复苏时间。

- **Content.** Peter Rice's appointment as Chief Content Officer acknowledges the need for better US execution and stronger talent relationships. Mgmt wants more breakout US hits that travel globally, while retaining the existing strategy; roughly 95% of spending remains focused on the core offering. Rice can influence projects already underway, but a sustained improvement in the broader slate will take time to demonstrate. Q4 franchises and live events, followed by titles such as Narnia, Bridgerton and Wednesday in 2027 are next

内容方面。彼得·赖斯被任命为内容总监，这一举措体现了公司希望提升在美国的业务表现并建立更稳固的人才关系的需求。管理层希望打造更多能够风靡全球的爆款作品，同时仍会坚持现有的战略；大约 95%的预算仍用于核心产品的发展上。赖斯可以对正在开展的项目施加影响，但要让整体作品质量持续提升，则需要时间来体现。接下来是第四季度的系列作品及现场活动，随后在 2027 年还将推出《纳尼亚传奇》《布里奇顿》和《星期三》等作品。

- **Margins.** Q3's $4.46B operating profit vs. Street at ~$4.27B benefited from spending shifting into Q4, including less than $200M of content and marketing expenses. The Q4 guide implies approximately $3.66B of operating profit excluding restructuring, still about 2% below Street at ~$3.73B. The full-year margin held at 31.5%.

利润率方面，第三季度的营业利润为 44.6 亿美元，而市场预期为 42.7 亿美元。这一差异得益于支出向第四季度转移，内容及营销方面的支出还不到 2 亿美元。对于第四季度的预测显示，扣除重组费用后的营业利润约为 36.6 亿美元，仍比市场预期的 37.3 亿美元低约 2%。全年的利润率则保持在 31.5%左右。

- **Restructuring.** The headcount charge represents approximately 120bps of Q4 margin and 30bps for FY26. Mgmt acknowledged overinvestment in some areas and framed the reductions as a way to improve prioritization and redirect resources. Annual savings, the reinvestment share and the FY27 margin benefit were not quantified.

重组措施：员工成本将导致第四季度的利润率下降约 120 个基点，而 2026 财年的利润率则会下降 30 个基点。管理层承认在某些领域存在投资过度的现象，并表示通过削减开支来优化资源分配。至于每年能节省多少成本、这些资金将如何重新投入，以及 2027 财年的利润率能提升多少，目前尚无具体数据。

- **Buybacks.** NFLX repurchased $4.8B of shares in Q3, with $22.3B remaining under its authorization. Diluted shares fell 3.3% y/y, helping per-share earnings growth exceed operating-profit growth

股票回购。NFLX 在第三季度回购了 48 亿美元的股票，其回购授权额度中还有 223 亿美元尚未使用。稀释后的每股股数同比减少了 3.3%，这有助于推动每股收益的增长速度超过营业利润的增长速度。

- **Partnerships.** TF1 viewing is increasing monthly, and early testing indicates the engagement is incremental to NFLX. Mgmt sees potential to replicate the model

and is open to third-party subscription add-ons, with nothing announced. Disney and Globo licensing agreements broaden the content offering, while selective 45-day theatrical windows and box-office reporting expand distribution options for certain films.

合作伙伴关系方面，TF1 的观众数量正在逐月增加，初步测试结果显示，这些观众也会观看 NFLX 的节目。管理层认为可以复制这种模式，并考虑引入第三方订阅服务，但目前尚未有相关宣布。迪士尼和 Globo 的授权协议进一步丰富了内容供给；此外，针对部分电影设定的 45 天上映期以及票房数据报告机制，也为这些电影的发行提供了更多可能。

SMCI +12%: Massive AI Revenue Beat and GM Upside as $60B AI Order Backlog Converts

SMCI 上涨 12%：得益于 600 亿美元的 AI 订单积压，该公司的人工智能业务营收大幅超出预期，同时毛利率也有上升空间。

SMCI positively preannounced F1Q27 revenue of $19B at midpoint, $4B above prior guidance and Street, driven by strong AI server/rack demand and backlog conversion, with SPCX likely a major contributor. GM also came in ~170bps above prior guidance on favorable customer/product mix, though remains ~535bps below last quarter's 17.6%. Higher-margin DCBBS solutions and improved terms with repeat customers could support margin recovery, while competitive pricing, working-capital requirements and governance concerns remain overhangs. FY27 revenue is tracking toward the high end of mgmt's $65–72B guide, with upside potential.

Key KPIs vs. Street **关键 KPI 与市场预期对比**

F1Q27 Revenue Guide: $18.5–19.5B, midpoint $19B, +279% y/y (last q $11.12B, +71% q/q) vs. Street $14.94B; prior guide $14.5–15.5B.

F1Q27 营收预期：185 亿至 195 亿美元，中间值为 190 亿美元；同比增幅为 279%（上一季度营收为 111.2 亿美元，环比增幅为 71%）；市场预期为 149.4 亿美元；此前的营收预期为 145 亿至 155 亿美元。

F1Q27 GM Guide: 12.0–12.5%, midpoint 12.25% vs. Street 10.5%; prior guide 10.4–10.8%, last q 17.6%.

前2000名加入可用 ▸
长按二维码立享优惠

F1 Q27 业绩指引：12.0–12.5%，中值为 12.25%，而市场预期为 10.5%；此前的业绩指引为 10.4–10.8%，上一季度的数值则为 17.6%。

F1Q27 EPS: No updated company guidance; prior guide $1.01–1.10 vs. Street ~$1.04.

F1Q27 每股收益：公司尚未更新业绩指引；此前的预测值为 1.01–1.10 美元，而市场预期则为 1.04 美元。

FY27 Revenue Guide: $65–72B, midpoint $68.5B, +75% y/y vs. Street $67.13B; revenue tracking toward high end.

2027 财年营收预期：650 亿至 720 亿美元，中间值为 685 亿美元；同比增幅为 75%，而市场预期为 671.3 亿美元；实际营收有望接近这一较高预期值。

AI Orders: $60B reported in June quarter

人工智能相关订单：6 月季度的数值为 600 亿美元

TECH RESEARCH/NEWS 技术研究/新闻

GOOGL: Hearing Clev neg saying Q3 trends slower at Q end on mixed retail and softer ROI trends with lower ‘27 ad trends. TMTB: Will feed already present search fears heading into the print

GOOGL：有消息称，Clev Neg 认为第三季度末的走势有所放缓，原因是零售业表现不佳，投资回报率也在下降，同时 2027 年的广告行业前景也不明朗。TMTB：这将进一步加剧人们对于搜索领域的担忧。

DOCN: Piper upgrades to OW as AI drives ARR acceleration and FY27 guide upside

DOCN：在人工智能推动收入加速增长的背景下，派珀升级至“买入”评级，同时上调 2027 财年的业绩预期。

Piper upgrades DOCN to OW from Neutral after the pullback, arguing AI demand is

accelerating ARR even on conservative ARR/MW assumptions, supported by DigitalOcean's integrated platform and AI-startup exposure. Piper sees potential upside to FY27 ARR guidance and believes financing concerns are overdone given prepayments/secured debt options, although higher capital needs and near-term margin/FCF pressure remain. PT cut to $126 from $142 on lower sector multiples.

Piper 在回调后将 DOCN 的评级从中性上调至增持，认为即便在保守的 ARR/MW 假设下，AI 需求也在加速 ARR 增长，这得益于 DigitalOcean 的集成平台和 AI 初创企业敞口。Piper 认为 FY27 ARR 指引存在上行潜力，并认为鉴于预付款/有担保债务选项，融资担忧被夸大，尽管更高的资本需求和近期利润率/自由现金流压力依然存在。目标价因行业估值倍数下降从 142 美元下调至 126 美元。

ASML/ASM/BESI: BNP says HBM despec fears are overdone; bandwidth growth still forces sustained DRAM wafer expansion

ASML/ASM/BESI：BNP 认为对 HBM 规格变动的担忧有些过度；带宽需求的增长仍会推动 DRAM 晶圆的持续生产。

BNP argues Rubin Ultra despec was largely a near-term supply optimization, not a structural demand reset: 8-Hi uses ~35% fewer wafers for <10% throughput loss, but 12-Hi remains the frontier standard and future bandwidth should push HBM capacity materially higher. Feynman 12-Hi/960GB could deliver ~5x Rubin Ultra 384GB throughput for only ~30% more HBM wafers. ASML is the clearest near/medium-term beneficiary, with BNP seeing >150 EUV units/year of underlying demand from 2028 and >40 DRAM EUV installs annually; ASM gets later DRAM ALD upside and BESI HBM4E/HBM5 hybrid-bonding upside in 2027/28.

BNP 认为，Rubin Ultra 的降规主要是近期的供应优化，而非结构性需求重置：8-Hi 在吞吐量损失不到 10%的情况下，每~少用 35%的晶圆，但 12-Hi 仍是前沿标准，未来带宽应会显著推高 HBM 产能。Feynman 12-Hi/960GB 有望在 HBM 晶圆仅多~30%的情况下，实现~5 倍于 Rubin Ultra 384GB 的吞吐量。ASML 是最明确的近期/中期受益者，BNP 预计从 2028 年起其潜在需求将超过每年 150 台 EUV 设备，且每年 DRAM EUV 装机量超过 40 台；ASM 将在后期获得 DRAM ALD 的上行空间，BESI 则将在 2027/28 年获得 HBM4E/HBM5 混合键合的上行空间。

LITE: Jefferies raises PT to $1,250 as GOOGL OCS share + 1.6T ramp drive major estimate upside

简讯：杰富瑞将谷歌的目标价上调至 1,250 美元，因谷歌云业务增速达 1.6 万亿，推动了该股估值的上行。

Jefferies raises 2027 rev/EPS ~12%/~8%, expecting LITE to become GOOGL's largest OCS supplier next year as external sourcing accelerates, with a path to ~$1.5B OCS revenue in C27 and $3.5B+ in C28. 1.6T should surpass 800G by the March quarter and improve transceiver margins toward ~30–35%, while a potential Google 6DT architecture could materially increase optical attach. CPO/NPO timing and micro-VCSEL remain longer-term risks. Buy, PT $1,250 from $1,200.

WDC: BofA raises PO to $800 as pricing strength offsets near-term EB constraints

WDC：由于价格优势能够抵消近期的盈利压力，美国银行将目标价上调至 800 美元。

BofA sees HDD pricing remaining stronger for longer, with F1Q27 $/TB +24% y/y, including nearline +19% and non-nearline +61%, offsetting EB growth of just +21% vs. LT guide +25%. F2Q rev/EPS of $4.61B/$5.02 sit above Street $4.57B/$4.79, while 40TB ePMR should drive EB reacceleration from F3Q and 44TB HAMR ramps in 2H27. FY27 rev/EPS rise to $19.62B/$22.37 from $18.67B/$19.17; PO $800 from $720.

GLW: Bernstein sees Q3 modestly below Street as smartphone softness offsets Optical upside

GLW：伯恩斯坦认为，由于智能手机市场表现疲软，抵消了光学产品领域的增长潜力，因此第三季度的业绩将会略低于市场预期。

Bernstein trims Q3 to $4.95B revenue/$0.81 EPS vs. Street $5.02B/$0.88, mainly on weaker Glass Innovations as smartphone/Apple datapoints soften. GLW still appears on track for its $20B revenue run-rate target in 4Q, while AI-driven Optical Communications remains the main upside lever. Bernstein lacks conviction on timing of the scale-up and stays MP/$140.

伯恩斯坦将第三季度的营收预期下调至 49.5 亿美元，每股收益则为 0.81 美元；而市场预期分别为 50.2 亿美元和 0.88 美元。这一下调主要是由于智能手机及苹果相关业务的数据表现不佳，导致 Glass Innovations 的业务状况恶化。不过，GLW 在第四季度仍有望实现 200 亿美元的营收目标，而由人工智能驱动的光通信技术则仍是推动其业绩增长的关键因素。伯恩斯坦对业务扩张的时机持谨慎态度，因此仍维持 140 美元的目标价。

CDNS: Wells expects another beat/raise, with 2H recurring revenue acceleration the key focus

内容分发网络：威尔斯预计业绩将再度表现优异并实现上调，其中下半年经常性收入的增长速度将是关键关注点。

Wells is a buyer into earnings, expecting another solid beat/raise as recurring revenue and add-on activity accelerate; FY26 growth could move toward ~20% vs. current guide midpoint ~18.9%. EDA demand remains high-teens, semiconductor R&D spend is now seen ~$175B in 2026 (+34% y/y), and Design IP remains on track for ~$1B run-rate exiting 2026. Agentic AI/foundational-model partnerships remain another upside lever. OW/$425.

Wells 是财报前的买方，预计公司将再次实现稳健的超预期/上调指引，因经常性收入和附加业务活动加速；FY26 增长可能向~20%迈进，而当前指引中点为~18.9%。EDA 需求仍保持近 20%的高位，2026 年半导体研发支出目前预计为~$175B（同比+34%），Design IP 仍有望在 2026 年底达到~$1B 的运行率。代理式 AI/基础模型合作仍是另一个上行杠杆。增持/目标价$425。

MSFT: Evercore ISI says AI demand remains supply-constrained, with Azure increasingly selective on capacity allocation

MSFT：Evercore ISI 认为，人工智能领域的需求依然受到供应限制，Azure 在分配资源时也愈发谨慎。

ISI's cloud panel found little evidence of AI demand slowing, with power/compute still the gating factor and MSFT increasingly selective allocating scarce capacity to emerging AI companies. Panelists favored hyperscalers over neoclouds given broader enterprise infrastructure/services, while custom silicon and utilization offer another

margin lever. ISI also sees Foundry benefiting as enterprises increasingly use 3–5 models and seek cheaper orchestration, with Office distribution strengthening Azure's enterprise advantage.

ISI 的专家小组认为，目前并没有迹象表明人工智能领域的需求正在放缓；电力与计算能力依然是决定性因素，而微软则越来越谨慎地分配有限的资源给那些处于发展阶段的人工智能公司。专家们更看好那些拥有完善企业级基础设施和服务的大型云服务提供商，同时，定制化芯片以及更高的资源利用率也能为企业带来更多优势。此外，随着企业开始使用 3 到 5 种不同的模型，并希望以更低成本实现模型的管理，代工行业也将从中受益；而 Office 产品的普及则进一步增强了 Azure 在企业市场中的优势。

P: Citi CTO meeting reinforces AI/storage growth; hyperscaler wins repeatable through FY28

P：花旗集团 CTO 会议强调人工智能与存储领域的增长前景；大型科技企业有望在截至 2028 财年的时间内持续保持优势。

Citi came away constructive from management, with no meaningful change in AI/data-center demand and durable growth across enterprise, hyperscaler and neocloud. Enterprise upside comes from continued share gains, larger CIO-level deals including >$20M, and expansion into Enterprise Data Cloud/Portworx/1touch. Hyperscaler penetration remains low with firm commitments through FY28, while DirectFlash/QLC deployments are described as platform-level, repeatable wins rather than one-offs.

花旗在与管理层交流后持建设性看法，认为 AI/数据中心需求没有实质性变化，且在企业、超大规模云厂商和新型云厂商方面均保持持久增长。企业端的上行空间来自持续的市场份额提升、包括金额超过 2000 万美元的更大规模 CIO 级别交易，以及向 Enterprise Data Cloud/Portworx/1touch 的拓展。超大规模云厂商的渗透率仍然较低，但已获得直至 FY28 的坚定承诺，而 DirectFlash/QLC 部署被描述为平台级、可重复的胜利，而非一次性交易。

VST: Raymond James trims PT to $176 as weaker ERCOT offsets improving data-center visibility

VST：雷蒙德·詹姆斯将目标价下调至 176 美元，因 ERCOT 状况恶化，导致对数据中心的了解变得更为困难。

RJ keeps Strong Buy but cuts PT to $176 from $182, with 3Q adj. EBITDA of ~$2.15B still ~2% above Street and +37% y/y; 2026 EBITDA rises to $7.27B vs. $7.2B guide midpoint. Weaker ERCOT forwards drive 2027/28 EBITDA down to $8.05B/$8.35B, roughly inline/~5% below Street, while ~$700M from Cogentrix/Meta plus additional Meta/AWS contributions support the out-years.

RJ 维持强力买入评级，但将目标价从 182 美元下调至 176 美元，第三季度调整后 EBITDA 为 21.5 亿美元，仍比华尔街预期高出 2%，同比增长 37%；2026 年 EBITDA 升至 72.7 亿美元，而指引中点为 72 亿美元。ERCOT 远期价格走弱导致 2027/28 年 EBITDA 降至 80.5 亿/83.5 亿美元，大致符合预期/较华尔街低约 5%，而来自 Cogentrix/Meta 的 7 亿美元加上 Meta/AWS 的额外贡献支撑了远期年份。

SOFTWARE

SNOW: Evercore ISI sees steady beat/raise path into CY27 as CoCo monetization + consumption accelerate

SNOW：Evercore ISI 预计，随着可可产品的商业化进程及消费需求的增长，该公司的业绩将在 2027 财年持续保持良好表现并实现进一步上升。

Evercore's CEO/customer checks show CoCo with clear product-market fit and real monetization at ~$1K–$3K/user, including customers already spending ~$50K+/month; some users report 5x+ productivity gains. AI data prep falling from weeks to hours is driving more queries/warehouse consumption, while CoWork expands the opportunity to business users. ISI sees a path to ~35–36% product growth exiting FY27 vs. Street ~29%, supporting continued beat/raise potential. OP/$430.

Evercore 的 CEO/客户调研显示，CoCo 具有明确的产品市场契合度和真正的变现能力，每用户 ~$1K–$3K，包括已有客户每月支出 ~$50K+；部分用户报告生产力提升 5 倍以上。AI 数据准备时间从数周缩短至数小时，正推动更多查询/仓库消费，而 CoWork 将机会扩展至业务用户。ISI 认为，到 FY27 退出时产品增长可达 ~35–36%，而 Street 预期为 ~29%，支持持续超预期/上调的潜力。目标价/$430。

DDOG: MS sees ~33–34% 3Q growth and path to ~30% ex-largest-customer growth into 2027

DDOG：微软预计第三季度增长率为~33–34%，到 2027 年，在扣除最大客户带来的影响后，其增长率仍将保持在~30%的水平。

MS remains constructive despite the known largest-customer headwind, with ex-largest-customer growth ~36% in 2Q as non-AI-native growth accelerated into the high-20s. Checks show strength across consumption, new logos, cloud migration and AI workloads, supporting ~30% ex-largest growth into 2027 and high-20s total growth. MCP tool calls are up ~4x q/q and >22x since 4Q25, making enterprise AI increasingly incremental. OW/$300.

尽管已知最大客户带来逆风，MS 仍保持建设性，第二季度剔除最大客户后的增长率为~36%，非 AI 原生增长加速至 20%以上高位。核查显示消费、新客户、云迁移和 AI 工作负载均表现强劲，支持 2027 年剔除最大客户后~30%的增长以及整体 20%以上高位的增长。MCP 工具调用量环比增长~4 倍，自 2025 年第四季度以来增长超过 22 倍，使企业 AI 日益成为增量。增持/目标价 300 美元。

DDOG: BTIG checks improve; sees upside to Street and ~30% growth into 2027

DDOG：BTIG 的评估有所改善；认为该股前景乐观，到 2027 年有望实现 30%的增长率。

BTIG sees enterprise demand accelerating on AI initiatives, cloud migration and AI observability, while broader core workloads also improve. Its upside Q3 case is ~$1.20B revenue, +35.5% y/y, vs. Street ~$1.15B/+29%, with the largest AI-native customer expected to stabilize after slower Q3 consumption. Buy/$289.

BTIG 认为，在 AI 计划、云迁移和 AI 可观测性推动下，企业需求正在加速，同时更广泛的核心工作负载也有所改善。其第三季度上行情景为营收~$12 亿，同比增长 35.5%，而华尔街预期为~$11.5 亿/增长 29%，其中最大的 AI 原生客户预计在第三季度消费放缓后趋于稳定。买入/目标价$289。

NET: Citi sees 35%+ durable growth as AI/agent traffic

drives broader platform adoption

NET：花旗预计，得益于人工智能与智能代理技术带来的应用需求，该平台将实现 35%以上的持续增长。

Citi's checks support 35%+ durable topline growth into/beyond CY27 vs. Street ~28%, despite NET trading around ~30x 2027 EV/Sales. Partners see adoption broadening from security into Workers, Workers AI and AI Gateway, while AI-agent traffic is +~1,700% y/y and developers have risen to >10M from 7.4M in 2Q. AI is also pulling through legacy Act 1/2 products, supporting revenue/RPO upside. Buy/High Risk, $400 PT.

花旗的核查支持 CY27 及之后 35%以上的持久营收增长，而市场普遍预期为 1001#28%，尽管 NET 目前交易在 1002#30 倍 2027 年 EV/Sales 左右。合作伙伴看到采用范围正从安全扩展到 Workers、Workers AI 和 AI Gateway，同时 AI 代理流量同比增长约 1,700%，开发者数量已从第二季度的 740 万增至超过 1,000 万。AI 也在拉动传统的 Act 1/2 产品，支撑营收/RPO 上行空间。买入/高风险，目标价 400 美元。

TWLO: Oppenheimer sees 3Q beat with AI/Voice mix driving gross-profit upside; PT to $325

TWLO：奥本海默预计第三季度业绩将超出预期，人工智能与语音技术带来的收益增长将推动毛利润上升；目标价定为 325 美元。

Oppenheimer expects 3Q revenue of ~$1.57B, +20.6% y/y and ~3–4% above Street, with gross profit >5% above consensus as VoiceAI, Conversations and software add-ons shift mix toward higher-margin products. Messaging remains healthy, while Personal AI agents could drive incremental messaging through verification/notifications and more software engagement. GP growth of ~17–18% y/y is the cleaner read on AI/mix. OP, PT $325 from $275.

前2000名加入可用 ▸
长按二维码立享优惠

奥本海默预计第三季度的营收将为 15.7 亿美元，同比增长 20.6%，这一数值也高于市场预期 3-4%；由于语音人工智能、对话功能以及各类软件附加服务使得产品结构向更高利润率的产品倾斜，因此公司的毛利率也将高于市场预期 5%。消息传递业务依然表现良好，而个人人工智能助手则可通过验证、通知等功能以及更多软件应用，进一步推动消息传递业务的增长。从人工智能相关业务的发展来看，公司的毛利率有望实现 17-18%的同比增长。该公司的目标股价从 275 美元上升至 325 美元。

CRM: Wolfe says BRZE deal is strategically necessary, but near-term Marketing Cloud confusion is the key risk

CRM：沃尔夫表示，BRZE 交易在战略上十分必要，但短期内 Marketing Cloud 系统可能出现的混乱则是最大的风险。

Wolfe's partner checks view the BRZE acquisition as defensive but strategically positive: Braze has been taking share from both Salesforce Marketing Cloud and Adobe, and combining BRZE with Data 360/Contentful could create a credible answer to ADBE's AEP/AEM stack. The key tell is whether CRM puts Braze at the center and deprioritizes legacy Marketing Cloud products; running all three in parallel risks customer confusion and Q4 renewal disruption. Read-through negative for ADBE, modestly positive for TWLO. CRM OP/$360.

Wolfe 的合作伙伴认为，对 BRZE 的收购是防御性的，但具有战略积极意义：Braze 一直在从 Salesforce Marketing Cloud 和 Adobe 手中夺取份额，将 BRZE 与 Data 360/Contentful 结合，可能打造出对 ADBE 的 AEP/AEM 技术栈的有力回应。关键信号在于 CRM 是否将 Braze 置于核心位置，并降低传统 Marketing Cloud 产品的优先级；三者并行运营可能导致客户困惑并扰乱第四季度续约。对 ADBE 构成负面传导，对 TWLO 略偏正面。CRM OP/$360。

ZM: UBS sees credible path to 6–8% FY30 growth, but Online stabilization remains the gating factor

ZM：瑞银认为，2030 财年的经济增长率有望达到 6%至 8%，但在线业务能否稳定仍是决定性因素。

UBS says Zoom's first out-year guide of 6–8% FY30 revenue growth looks achievable

if Enterprise accelerates, with Phone sustaining teen growth and CX >50%; AI products already represent ~60% of ZCX ARR and ZVA customer growth is >250%. The concern remains Online, recently ~1% y/y and only expected roughly flat by FY30. ~40% EBIT margins remain intact; Neutral, PT $112 from $115.

瑞银表示，如果企业业务加速，Zoom 对 2030 财年收入增长 6%至 8%的首次年度指引看起来可以实现，其中 Phone 业务维持十几%的增长，CX 业务增长超过 50%；AI 产品已占 ZCX 年度经常性收入的~60%，ZVA 客户增长超过 250%。担忧仍然在 Online 业务，最近同比为~1%，预计到 2030 财年仅大致持平。~40%的 EBIT 利润率保持不变；中性评级，目标价从 115 美元下调至 112 美元。

DT: BTIG raises PT to $73 as log monitoring + renewal cycle support reacceleration

DT：BTIG 将目标价上调至 73 美元，原因是日志监控功能以及产品更新周期的相关支持正在加速发展。

BTIG's partner checks were steady-to-better, with practices growing mid-teens to ~20–21%; log monitoring is taking share and DPS renewals can drive ~30% uplift on older ELAs. AI demand is building more gradually than at DDOG, but BTIG sees ARR growth improving from ~16% today to 18%+ by FY28. Buy, PT $73 from $62.

BTIG 的合作伙伴业务表现稳定且呈上升趋势，其业务增长速度在 15%左右，甚至可达 1001#20–21%；日志监控业务也在不断占据更多市场份额，而 DPS 续订业务则能让那些较旧的 ELA 产品实现 1002#30%左右的业绩提升。虽然对 AI 的需求增长速度不如 DDOG 那么快，但 BTIG 预计，到 2028 财年时，该公司的年度收入增长率将从目前的 1003#16%提升至 18%以上。建议买入，目标价为 73 美元，当前价格则为 62 美元。

INTERNET

RDDT: Hearing Clev positive saying NT demand sounds strong mid-funnel traction, favorable ROI & MT use case expansion

RDDT：据 Clev 透露，当前在转化流程的中间阶段，对 NT 产品的需求相当强劲，投资回报率良好，且其应用场景也在不断扩展。

AMZN: Evercore ISI says AWS sold out through 2028; agentic commerce is the key strategic swing factor

AMZN：Evercore ISI 认为，AWS 的订单量在 2028 年前都将保持满负荷状态；而“代理式商务”则是决定其战略走向的关键因素。

Evercore’s Amazon Day supports at least mid-30s AWS growth with demand exceeding supply through 2028 and margins remaining high, while advertising and U.S. retail share gains remain durable. The biggest debate is agentic shopping: Muse/other agents could pressure Amazon discovery revenue, but AMZN’s logistics, Prime and seller ecosystem remain meaningful defenses. Leo also looks well positioned outside China, though launch capacity could constrain growth through 2030. OP/$355.

Evercore 的 Amazon Day 活动支撑了 AWS 至少 30%中段的增长，需求超过供给的局面将持续到 2028 年，且利润率保持高位，同时广告和美国零售份额的获取仍然持久。最大的争议在于代理式购物：Muse/其他代理可能对亚马逊的发现收入构成压力，但 AMZN 的物流、Prime 和卖家生态系统仍是重要的防御。Leo 在中国以外也处于有利地位，尽管发射能力可能制约其到 2030 年的增长。目标价 355 美元。

AMZN: Jefferies expert sees logistics automation + 3P parcel as meaningful LT margin levers

AMZN：杰富瑞的专家认为，物流自动化以及第三方快递服务有望成为提升长期利润率的有效手段。

Jefferies’ logistics expert says AMZN remains early in automation, with only ~40–45% of U.S. small-sortable FCs highly automated; newer sites can handle ~1M peak-day units with ~1K workers vs. ~2.5–3K historically. Retail logistics investment is reaccelerating with ~$27B of visible capex, while 3P parcel could become a meaningful profit pool as delivery stations rise from ~575 to ~950 by 2030 and early shipper trials show 20–25% savings vs. UPS/USPS. Grocery remains the weak link.

Jefferies 的物流专家表示，AMZN 在自动化方面仍处于早期阶段，美国小型可分类履约中心中仅有~40–45%实现了高度自动化；较新的站点可在~1K 名员工的情况下处理~1M 的峰值日处理量，而历史上则需要~2.5–3K 名员工。零售物流投资正在重新加速，可见资本支出达~$27B，同时随着配送站到 2030 年从~575 个增至~950 个，3P 包裹业务可能成为一个可观的利润池，早期托运人试验显示相较 UPS/USPS 可节省 20–25%。杂货业务仍是薄弱环节。

BIDU: Citi sees AI Cloud reaccelerating to +99% y/y, offsetting ad weakness but pressuring profits

百度：花旗预计人工智能云业务增速将再度加快，同比增幅可达 99%，这一增长势头可抵消广告业务带来的负面影响，但也会给公司利润带来压力。

Citi raises AI Cloud Infra estimates to RMB8.35B in 3Q, +99% y/y, and RMB9.5B in 4Q, +64%, helping Baidu General return to positive growth despite core ads falling ~21%/19%. The trade-off is heavier Ernie/model investment, with 3Q non-GAAP EPADS at RMB5.59 vs. Street RMB7.67 and downside risk to profit consensus. Buy, PT $154 from $166.

花旗将 AI 云基础设施第三季度营收预估上调至 83.5 亿元人民币，同比增长 99%，第四季度上调至 95 亿元人民币，同比增长 64%，帮助百度整体业务恢复正增长，尽管核心广告业务分别下降 21%/19%。代价是加大了对文心一言/模型的投入，第三季度非 GAAP 每 ADS 收益为 5.59 元人民币，低于市场预期的 7.67 元人民币，利润共识面临下行风险。买入评级，目标价从 166 美元下调至 154 美元。

SE: JPM says Sea Cloud adds meaningful optionality, but capital needs/ROIC must be proven

SE：JPM 认为 Sea Cloud 能带来重要的灵活性，但其资本需求与 ROIC 水平仍需得到验证。

JPM says Sea Cloud could become a meaningful fourth pillar, but the open-ended capital commitment explains the negative stock reaction. Sea Cloud has been built over ~2 years with ~500 employees; JPM estimates ~$400M of current capex, while achieving just ~2% of 2026 group revenue could imply ~$1.3B of investment under its

assumptions. A potential Monee IPO could crystallize value and reduce SE's capital burden. OW/$173.

摩根大通表示，Sea Cloud 有望成为重要的第四大支柱，但开放式资本承诺解释了股价的负面反应。Sea Cloud 历经~2 年打造，拥有~500 名员工；摩根大通估计当前资本开支为~4 亿美元，而根据其假设，仅实现 2026 年集团收入的~2%就可能意味着~13 亿美元的投资。Monee 潜在的 IPO 可能释放价值并减轻 SE 的资本负担。增持/目标价 173 美元。

SPOT: BNP sees monetization upside from tighter Family plans + broader product expansion

SPOT：BNP 认为，更严格的家庭套餐政策以及产品范围的扩大，将为该公司带来更多的盈利机会。

BNP highlights several monetization levers ahead of earnings: new Family-plan verification could curb account sharing and lift ARPU, audiobooks are expanding from 22 to ~180 countries, and podcast memberships are launching across 34 markets. Spotify also expanded licensing for its remix product and introduced new AI/artist protections. The collective read is more revenue and margin levers beyond core Premium pricing.

在财报发布之前，BNP 指出了几项可以提升盈利的举措：新的家庭套餐验证机制有助于减少账户共享现象，从而提高每用户平均收入；有声书业务已从 22 个国家扩展到 1001 个国家；此外，播客订阅服务也在 34 个市场推出。Spotify 则扩大了其混音产品的授权范围，并推出了新的 AI 及艺术家保护措施。这些举措都能为该公司带来更多收入与利润，弥补仅依靠高级会员费所带来的收益不足。

UBER: TD Cowen expects strong 3Q, sees AV fears overly discounted at current valuation

优步：TD Cowen 预计第三季度业绩表现强劲，认为当前估值已充分反映了市场对自动驾驶领域的担忧。

TD Cowen models 3Q Gross Bookings of $59.8B, +20% y/y, and EBITDA of $2.93B, +30%, near the high end of guidance, supported by Mobility, Delivery/Grocery and Uber One >50M subs (+50% y/y). The bigger call is valuation: UBER's Mobility

segment is implied at just ~4x 2027 EV/EBITDA despite ~15% EBITDA CAGR. Cowen expects a hybrid AV/human-driver network to persist for 5–10 years. Buy/$118.

TD Cowen 预测第三季度总预订量为 598 亿美元，同比增长 20%，EBITDA 为 29.3 亿美元，同比增长 30%，接近指引高端，受出行业务、配送/杂货业务以及 Uber One 订阅用户超过 5000 万（同比增长 50%）支撑。更大的看点在于估值：尽管 UBER 出行业务的 EBITDA 复合年增长率为 15%，但其 2027 年 EV/EBITDA 仅隐含约 4 倍。Cowen 预计混合自动驾驶/人类司机网络将持续 5 至 10 年。买入/目标价 118 美元。

DASH: BTIG checks support strong 3Q, but 2027 expectations leave little room for upside

DASH：BTIG 认为第三季度业绩表现会较为强劲，但 2027 年的预期则几乎不存在上涨空间。

BTIG's U.S./Europe data point to mid-to-high-20s 3Q order growth and GOV toward the high end of DASH's 32–36% guide, with U.S. organic orders ~16–18% and AOV healthy. The caution is the forward bar: Street already assumes ~16% organic order growth in 4Q and ~17% in 2027 alongside meaningful margin recovery. Buy/$225.

BTIG 对美国和欧洲市场的预测显示，第三季度的订单增长率将在 20%至 25%之间；而政府相关领域的订单增长率则处于 DASH 预测范围的较高水平，即在 32%到 36%之间。美国的自然增长订单增长率则为 16%至 18%，平均每笔订单的价值也保持稳定。不过需要警惕的是未来前景：市场已经预计第四季度的自然增长订单增长率将为 16%，2027 年这一数字则将为 17%，同时企业的利润率也有望有所回升。建议买入，目标价 225 美元。

HOOD: Mizuho sees single-stock perpetual futures as incremental upside with little cannibalization

胡德：瑞穗银行认为，个股永续期货能够带来额外的收益，且不会对现有业务造成太大冲击。

Mizuho's 600+ active-user survey shows ~94% are likely/very likely to trade single-stock perps, while 84% expect to fund them mostly or entirely with new money, limiting cannibalization of equities. Timing remains uncertain, but Mizuho sees the product as another lever into HOOD's ~$600B TAM and a potentially meaningful new

revenue pool. OP/$140.

瑞穗银行针对 600 多名活跃用户的调查显示，有 1001#94%的人表示很可能或非常有可能交易单只股票的衍生品；同时，84%的人打算用新资金来为这类交易提供资金支持，从而避免对传统股票业务的冲击。虽然具体推出时间尚不确定，但瑞穗银行认为这类产品可以成为进入 HOOD 市场这一价值 6000 亿美元的市场领域的又一手段，同时也可能带来新的收入来源。每份产品的价值为 140 美元。

NEWS

Anthropic / AI Cloud: IPO disclosures sharpen the funding and customer-concentration debate – WSJ

Anthropic/AI 云业务：首次公开募股的相关披露加剧了关于资金状况与客户集中度问题的讨论——《华尔街日报》

A draft prospectus viewed by WSJ shows H1 revenue of $16.3B, with roughly 20% from two customers, and infrastructure commitments above $600B, potentially reaching $750B including deals under discussion. The $80.7B net loss was largely driven by financing-related accounting adjustments; compute and infrastructure spending was nearly $9B. Funding capacity and counterparty concentration remain key questions for the AI supply chain.

《华尔街日报》看到的招股书草案显示，该公司上半年的营收为 163 亿美元，其中约 20%来自两家客户；在基础设施方面的投资额已超过 6000 亿美元，如果包括正在洽谈中的项目，这一数字还可能达到 7500 亿美元。807 亿美元的净亏损主要源于与融资相关的会计调整；而用于计算和基础设施建设的支出则约为 90 亿美元。对于人工智能产业链而言，资金筹措能力以及对手方的集中度依然是需要关注的关键问题。

NVDA: Neocloud commitments and Firmus investment talks – The Information / Bloomberg

NVDA：Neocloud 的合作计划与 Firmus 的投资谈判——The Information / 彭博社

Nvidia has over $170B in guarantees, commitments and investments supporting AI-cloud customers. It is also discussing a Firmus investment following its withdrawn IPO.

英伟达已为人工智能与云计算领域的客户提供了超过 1700 亿美元的担保、承诺及投资支持。在取消首次公开募股后，该公司还在考虑对 Firmus 进行投资。

AI Macro: Finance leaders split over bubble risk after Griffin warning – Bloomberg

AI 宏观：格里芬发出警告后，金融界领袖们对泡沫风险看法不一——彭博社

Ken Griffin warned that parts of AI are almost certainly in a bubble as companies scrutinize spending and struggle to extract value. Deutsche Bank's Christian Sewing pushed back on imminent bubble concerns, while BlackRock's Larry Fink argued faster data-center construction is needed to lower compute costs. The debate centers on whether monetization can catch up with capital commitments.

肯·格里芬警告称，由于各公司都在谨慎控制开支，并且难以从人工智能技术中获取实际价值，因此该领域的某些方面很可能会出现泡沫。德意志银行的克里斯蒂安·塞文则对“即将出现泡沫”的观点表示反对，而黑石集团的拉里·芬克则认为，需要加快数据中心的建设速度，以此降低计算成本。争论的焦点在于：人工智能技术的商业化进程能否跟上相应的资本投入速度。

MSFT: Xbox strategic interest – The Information

MSFT：Xbox 具有战略意义——《The Information》报道

PE explored a $100–150B Xbox buyout without negotiations. Microsoft says it is not for sale.

私募股权公司曾考虑在不进行谈判的情况下，出价 1000 亿至 1500 亿美元收购 Xbox，但微软表示该公司不会出售。

AI Infrastructure: Trump urges community payments to support data-center development – Reuters

人工智能基础设施：特朗普呼吁各方出资以支持数据中心建设——路透社

Trump urged data-center operators to make payments to host communities or residents, arguing financial agreements can turn local opposition into support. For hyperscalers and developers, the potential trade-off is additional project costs against faster approvals. No standardized payment requirement was announced.

特朗普呼吁数据中心运营商向所在社区或居民支付费用，认为这样的经济补偿措施能够将当地的反对声势转化为支持。对于那些大型科技企业及开发商而言，需要权衡的是：更高的项目成本与更快的审批速度之间的关系。目前尚未有关于标准支付金额的明确规定。

DeepSeek: Open-sources its production inference framework – The Information / DeepSeek

DeepSeek：开源其生产推理框架——《信息》/ DeepSeek

DeepSeek released DeepInfer, its production inference framework supporting V4.1-Flash on Nvidia Blackwell and Huawei Ascend 950 hardware. Some caching and load-balancing components remain excluded. The Information reports an 82.9% gross margin for its model-access business in January–July. Potential implications include lower third-party serving costs and more competition on inference pricing.

DeepSeek 推出了 DeepInfer 这一推理框架，该框架支持在 Nvidia Blackwell 及华为 Ascend 950 硬件上运行 V4.1-Flash 版本。不过，其中仍有一些缓存与负载均衡相关功能尚未实现。有报道指出，其在 1 月至 7 月期间的模型服务业务毛利率达到了 82.9%。这一成果意味着第三方服务成本可能会降低，同时推理服务的价格竞争也会更加激烈。

GOOGL / AMZN / NVDA: PyTorch support lowers friction for custom AI chips – PyTorch

GOOGL / AMZN / NVDA：PyTorch 的支持降低了开发定制人工智能芯片的难度——PyTorch

TorchTPU and TorchNeuron extend the PyTorch ecosystem to Google TPUs and AWS Trainium, reducing the work needed to run models on alternative accelerators. The development matters for custom-silicon adoption and the software advantage supporting Nvidia's GPU franchise. Broader framework support still leaves workload performance and migration costs to be proven.

TorchTPU 与 TorchNeuron 将 PyTorch 生态系统扩展到了 Google TPUs 及 AWS Trainium 平台上，从而减少了在其它加速器上运行模型时所需的工作量。这一发展对于采用定制芯片而言具有重要意义，同时也提升了 Nvidia GPU 产品的竞争力。不过，目前该框架对更多平台的支持程度仍需进一步验证，其在工作负载处理效率及迁移成本方面的表现也还有待检验。

NVDA / TSM: Spectrum-X CPO moves into mass production – Commercial Times

NVDA / TSM：Spectrum-X CPO 进入大规模生产阶段——《商业时报》

Nvidia's Spectrum-X co-packaged optics platform is moving into mass production, with TSMC's COUPE technology supporting the rollout. The system supports 512 ports at 200Gbps. The focus for the optical and advanced-packaging supply chains shifts toward shipment volumes, customer adoption and component content.

Nvidia 的 Spectrum-X 共封装光模块平台即将进入大规模生产阶段，台积电的 COUPE 技术将为该产品的量产提供支持。该系统能够支持 512 个端口，传输速率可达 200Gbps。在光模块及先进封装领域的供应链中，人们更关注的是产品的出货量、客户采用率以及所使用的组件质量。

NVDA / VRT / ETN / DELL / HPE: DSX POD targets faster AI-factory deployment – PR

NVDA / VRT / ETN / DELL / HPE：DSX POD 旨在加快人工智能工厂的部署速度——新闻稿

Nvidia introduced modular DSX POD AI factories integrating Vera Rubin compute, networking, power and liquid cooling, with initial delivery targeted for early 2027. Nvidia says deployment can take 14 days at prepared sites versus roughly six months for conventional deployment. Partners span server, power, cooling and manufacturing vendors, including Dell, HPE, Vertiv, Eaton, Schneider Electric and Delta.
