TMTB Morning Wrap TMTB 晨间综述

TMT BREAKOUT
9 MINUTES AGO • PAID

Listen

Good morning. **QQQs -2.5% / SPX -1%** on one of the worst nights for Tech earnings I can recall in a long time. **INTC -25%** whiffed on PCs; **AMZN -7%** missed AWS but Jassy tried to make up for it with a 40% '27/'28 guide although that still sits below buyside; **SNDK -8%** on a decent print but with plenty of nits; RDDT -20% just horrible print; **RBLX -17%** on weaker bookings guide; **TWLO -19%** on first decel in several quarters.

早上好。QQQ -2.5% / SPX -1%，这是我很久以来记忆中最糟糕的科技股财报夜之一。INTC -25%，PC 业务大幅不及预期；AMZN -7%，AWS 未达预期，但 Jassy 试图用 40%的'27/'28 指引来弥补，不过仍低于买方预期；SNDK -8%，财报尚可但瑕疵不少；RDDT -20%，财报简直糟糕透顶；RBLX -17%，预订量指引走弱；TWLO -19%，几个季度以来首次减速。

Couple in fears around midterms and Iran (Oil +2% after tanker attacks and renewed Houthi strikes), some BTC hacking news, and you have an ugly situation for a Friday. Semis -6% early while Software -50bps holding in the best. Plenty of semi names down 7-10%. DELL/HPQ/AMD -10% in sympathy with the INTC PC driven guide.

由于中期选举及伊朗局势的不确定性（油价在油轮遭袭以及胡塞武装再次发动袭击后上涨 2%），再加上一些关于比特币被黑客攻击的传闻，周五的市场状况实在糟糕。半导体板块跌幅达 6%，而软件板块则仅下跌 50 个基点，表现相对较好。许多半导体公司的股价跌幅在 7%到 10%之间。戴尔、惠普和 AMD 的股价也因英特尔在 PC 领域的表现不佳而下跌了 10%。

Asia mixed overnight: TPX -0.95%, NKY -2.12%, Hang Seng +1.46%, HSCEI +1.37%, SHCOMP -1.44%, Shenzhen -2.65%, Taiwan TAIEX -2.49%, Korea KOSPI -3.48%

亚洲市场夜间表现不一：TPX 下跌 0.95%，NKY 下跌 2.12%，恒生指数上涨 1.46%，HSCEI 上涨 1.37%，上证综指下跌 1.44%，深证成指下跌 2.65%，台湾 TWSE 指数下跌 2.49%，韩国 KOSPI 指数下跌 3.48%。

Ugly start all around. We'll cover **AMZN, INTC, SNDK, TWLO** Earnings first then onto the usual. We'll have the **RBLX** and **RDDT** recaps in Slack as we get through them.

开局整体表现不佳。我们先将重点放在 AMZN、INTC、SNDK、TWLO 的财报分析上，之后再处理其他常规事项。对于 RBLX 和 RDDT 的业绩情况，我们会在处理完相关内容后通过 Slack 进行总结。

Let's get to it... 我们开始吧.....

AMZN -7%: AWS +39% beat Street but missed the ~43% bogey (smallest beat since Q2'25), and the new "north of 40%" for 2027-28 above street but already where below buyside is

亚马逊股价下跌 7%：AWS 业务增长 39%，虽好于市场预期，但仍未达到 1001#43%这一目标值（这是自 2025 年第二季度以来最差的表现）；至于 2027-28 年的增长预期，虽然高于市场预期，但也已低于分析师们的预期。

Overall, not the clean print longs wanted (still a very crowded long) but also not the worst of the night. AWS accelerated for a sixth straight quarter, but the q/q dollar add slowed to $3.75B from a record $4.6B, and mgmt gave no 4Q AWS or margin color. The new multi-year frame (AWS "north of 40%" in each of 2027 and 2028, a $1T AWS in five to 10 years) pulls sell-side numbers up:

总体而言，这不是多头想要的干净财报（仍然是一个非常拥挤的多头），但也不是当晚最糟糕的。AWS 连续第六个季度加速，但环比美元增量从创纪录的 46 亿美元放缓至 37.5 亿美元，而且管理层没有给出第四季度 AWS 或利润率的指引。新的多年框架（AWS 在 2027 年和 2028 年各自“超过 40%”，五到十年内达到 1 万亿美元）推高了卖方预期：

AWS revenue	At 40% (the floor)	Street 10/29	Gap
2027	~$245.1B	$236.0B (+35%)	+$9.1B, ~3.8% above
2028	~$343.1B	$308.4B (+31%)	+$34.7B, ~11.3% above

but it sits below the mid-40s to low-50s FY27 AWS many on the buyside already model. Most bulls were happy to get the number as shows Jassy and co being more shareholder friendly while others questioned the timing. The Q4 AWS buyside expectation comes down to low 40s from highs 40s.

不过，这一数字仍低于 2027 财年的 45%至 50%左右这一水平，而许多投资者早已对这一数值做出了预测。大多数看涨人士对这一结果感到满意，认为这表明贾西等人更重视股东利益；但也有人对宣布这一数字的时机提出了质疑。至于 AWS 在第四季度的业绩预期，也从之前的 40%以上下降到了 40%出头。

Bulls focused on $578B of backlog (+$82B q/q, ~2.9x y/y), visibility into “some of 2029,” external Trainium sales from late 2027 and a record 13.9% OM; bulls will say ads (Prime Day timing, high-teens 4Q guide) and the 4Q OI guide (Leo capitalization slipping to 1Q27) are one time items that can be looked through. Bears will point to an unexplained slowdown in AWS adds, AI AWS margins below core, & “meaningfully more” 2027 capex on top of -$33.5B of 3Q FCF. Still feeling around, but buyside #s seem to be settling in around ~$12 in EPS for FY27, down slightly.

多头关注 5780 亿美元的积压订单（环比增加 820 亿美元，~同比 2.9 倍），对“2029 年部分时间”的可见性，从 2027 年底开始的外部 Trainium 销售，以及创纪录的 13.9%营业利润率；多头会说广告（Prime Day 时间安排，第四季度指引高 teens）和第四季度营业利润指引（Leo 资本化滑至 2027 年第一季度）是一次性项目，可以看穿。空头会指出 AWS 新增量莫名放缓，AI AWS 利润率低于核心业务，以及 2027 年资本支出“显著增加”，而第三季度自由现金流为负 335 亿美元。仍在摸索，但买方数字似乎稳定在~2027 财年每股收益约 12 美元，略有下降。

Details:

Revenue: $201.9B, +12.1% y/y, +13% ex-FX (last q +19.6% y/y) vs. Street $202.35B, +12.3%; buyside ~$202.5-203.5B

营收：2019 亿美元，同比增长 12.1%，剔除汇率因素后增长 13%（上一季度同比增幅为 19.6%）；市场预期为 2023.5 亿美元，同比增长 12.3%；分析师预期则在 2025 亿至 2035 亿美元之间。

AWS: $46.0B, +39.3% y/y (last q +36.7%) vs. Street $45.45B, +37.7%; buyside ~43%

AWS：460 亿美元，同比增幅为 39.3%（上一季度为 36.7%）；市场预期为 454.5 亿美元，增幅为 37.7%；分析师预期则为 1001 美元，增幅为 43%。

AWS OM: 38.7% vs. Street 37.3%; buyside ~40%

AWS OM：38.7%，而市场预期为 37.3%；买入方预期为 1001#40%

EBIT: $28.1B / 13.9% OM vs. Street $26.2B; buyside ~$27.5-28B

息税前利润：281 亿美元，毛利率为 13.9%；而市场预期为 262 亿美元；投行预测值为 275 亿至 280 亿美元。

GAAP EPS: $1.89 vs. Street $1.97

GAAP 每股收益：1.89 美元，而市场预期为 1.97 美元。

4Q Revenue Guide: $240-247B, midpoint $243.5B, +14.1% y/y vs. Street $244.4B, +14.5%; buyside HE ~$247-248B

第四季度营收预期：2400 亿至 2470 亿美元，中间值为 2435 亿美元；同比增幅为 14.1%，而市场预期为 2444 亿美元，增幅为 14.5%。分析师给出的乐观预测值为 2470 亿至 2480 亿美元。

4Q EBIT Guide: $28.5-33.5B, midpoint $31.0B, +24% y/y vs. Street $32.9B; buyside HE ~$34-35B

第四财季息税前利润预期：285 亿至 335 亿美元，中间值为 310 亿美元；同比增幅为 24%，而市场预期为 329 亿美元；分析师给出的目标值为 340 亿至 350 亿美元。

Key Takeaways

AWS. AWS revenue of $46.0B grew +39.3% (last q +36.7%), the sixth straight quarter of acceleration, and beat Street's $45.45B (+37.7%) by 1.2%, the smallest AWS beat since 2Q25 (2Q: +4.3%). It missed the ~43% buyside bar, with desks ranging 41-45% and a widely followed third-party cloud panel at ~44%. The q/q add slowed to $3.75B from a record $4.6B in 2Q; asked directly, Jassy said only that "the amount that we

add every quarter is not equal" and pointed to capacity planned over the next eight to 10 quarters, with no 4Q number. The 2-yr stack still improved to 59.5 from 54.2, and the run rate is $184B (2Q $169B). Mgmt said core compute and storage grew at their fastest rates in several years.

AWS。AWS 营收 460 亿美元，增长+39.3%（上季度+36.7%），连续第六个季度加速，并以 1.2%的优势超过华尔街预期的 454.5 亿美元（+37.7%），这是自 2Q25 以来 AWS 超出预期幅度最小的一次（2Q：+4.3%）。它未达到~43%的买方门槛，交易台预期区间为 41-45%，而一个广受关注的第三方云小组为~44%。环比增长额从第二季度的 46 亿美元降至 37.5 亿美元；当被直接询问时，贾西仅表示"每季度的新增规模并不相同"，并提到了未来 8 到 10 个季度内的扩展计划，但并未给出第四季度的具体数字。两年期的累计增长额则从 54.2 上升至 59.5，而业务营收则为 1840 亿美元（第二季度为 1690 亿美元）。管理层称，核心计算能力和存储能力正处于多年来最快的增长速度之中。

Outlook. The incremental piece is the first multi-year AWS guide: "north of 40%" growth in each of 2027 and 2028, and a $1T revenue business "in the next five to 10 years" (July: "very possibly … in time"). On ~$176B of FY26 AWS revenue (9M actual plus post-print Street 4Q), 40% means ~$247B in FY27 and ~$345B in FY28, which takes ~$4.5-4.8B of q/q adds every quarter in 2027 and ~$7B a quarter in 2028, vs. $3.75B this quarter. Pre-print Street had FY27 AWS at ~$236B (+35%) and FY28 at ~$308B (+31%), so the sell-side moves up, and early post-print Street is already ~$251B (+42%) and ~$351B (+40%). The problem is the buyside: FY27 AWS bars sat in the mid-40s to low-50s, so "north of 40%" lowers those curves even as Street numbers rise.

展望。增量信息是第一份多年期 AWS 指引：2027 年和 2028 年各增长"超过 40%"，以及"在未来五到十年内"实现 1 万亿美元营收业务（7 月时说法是"很有可能……在某个时候"）。在 2026 财年 AWS 营收~$176B（9 个月实际值加上财报后 Street 第四季度预测）的基础上，40%意味着 2027 财年~$247B、2028 财年~$345B，这要求 2027 年每个季度环比增加~$4.5-4.8B，2028 年每季度增加~$7B，相比本季度的 37.5 亿美元。财报发布前，华尔街对 2027 财年 AWS 的预期为 2360 亿美元（+35%），2028 财年为 3080 亿美元（+31%），因此卖方在上调预期，而财报发布后的早期华尔街预期已经达到 2510 亿美元（+42%）和 3510 亿美元（+40%）。问题在于买方：2027 财年 AWS 的门槛在 40%中段到 50%低段，因此"超过 40%"会拉低这些曲线，即便华尔街的数字在上升。

Backlog. Backlog of $578B rose +$82B q/q and ~2.9x y/y, with a 6.1-year weighted-

average remaining life (2Q 6.4 years). The add slowed from +$132B in 2Q and +$120B in 1Q, but those quarters carried disclosed mega-deals (OpenAI's +$100B expansion in 1Q, Anthropic's >$100B in 2Q), while 3Q had none and mgmt called the backlog "well-diversified." The release listed new AWS agreements with META, NVDA, CRM, ORCL and others. Jassy said customers reserve blocks of hundreds of megawatts up to a gigawatt well in advance, giving "very good visibility into 2027 and 2028 and some of 2029 too." Dropped from the call vs. July: the "double the power capacity by the end of 2027" line, any GW figures, the "not enough capacity to meet all the demand" line, and the ">$25 billion" chips and AI run rates, now described only as growing triple digits.

积压订单。积压订单达 5780 亿美元，环比增加 820 亿美元，同比为 1001#2.9 倍，加权平均剩余期限为 6.1 年（第二季度为 6.4 年）。增量较第二季度的+1320 亿美元和第一季度的+1200 亿美元有所放缓，但这两个季度均包含已披露的超大额交易（第一季度 OpenAI 的+1000 亿美元扩展，第二季度 Anthropic 的>1000 亿美元），而第三季度没有此类交易，管理层称积压订单"高度多元化"。新闻稿列出了 AWS 与 META、NVDA、CRM、ORCL 等公司的新协议。贾西表示，客户们会提前很久就预订数百兆瓦到 1 吉瓦级别的电力容量，这让我们能够"很清楚地了解 2027 年、2028 年的情况，以及 2029 年的部分情况"。与 7 月时的表述相比，现在不再提及"到 2027 年底电力容量将翻一番"、"具体的吉瓦数"、"产能不足无法满足所有需求"等内容，而关于芯片和人工智能相关领域的支出，也仅说明其增长速度在三位数以上。

AWS margins. AWS OI of $17.8B (38.7% OM) beat Street's 37.3% by ~140bps but missed the ~40% bogey, and reported OM fell ~70bps q/q from 39.4%. The q/q decline is optical: 3Q carried a $91M energy-derivative gain vs. $551M in 2Q, so ex both, OM rose ~40bps to ~38.5% from ~38.1%. CFO said he is "not guiding at all" on AWS margin, citing AI mix and component pricing as headwinds. Jassy said AI margins are "well ahead" of where core was at the same stage (July: "a little ahead"), but they are still below core. Contracts under energy-derivative accounting rose to ~690M MWh from ~270M, so future mark-to-market noise in AWS OI can get bigger.

AWS 利润率。AWS 运营利润为 178 亿美元（运营利润率 38.7%），超出华尔街预期的 37.3%约 140 个基点，但未达到 40%的目标，报告的运营利润率环比下降约 70 个基点，从 39.4%降至 38.7%。环比下降只是表象：第三季度包含 9100 万美元的能源衍生品收益，而第二季度为 5.51 亿美元，因此剔除这两项后，运营利润率从 38.1%上升约 40 个基点至 38.5%。首席财务官表示，他"完全不提供指引"关于 AWS 利润率，并指出 AI 组合和组件定价是逆风因素。贾西表示，人工智能业务领域的利润水平"远远高于"同一发展阶段的核心业务利润水平（7 月时称"略高一些"），但仍低于核心业务的利润水平。按衍生品会计标准计算的能源相关业务规模从~270 百万兆瓦时上升到了~690 百万兆瓦时，因此 AWS 的营业利润在未来可能会受到更大的市场波动影响。

Chips. External Trainium sales are now a plan: "We intend to do so late in 2027," and Jassy expects "a very significant business," vs. "a real chance" in July. Graviton and Trainium revenue commitments each grew more than 20x y/y, most of Bedrock runs on Trainium, and Bedrock is "the fastest growing multi-billion dollar service in AWS's history" with Jassy saying it could get as large as EC2. Inference is now "well over half" of AWS's AI revenue. On useful lives, prior-generation Graviton backlog more than doubled q/q after the Graviton5 launch, and short-term prior-generation Trainium capacity sells at a premium to 1H. Jassy also said neocloud capacity runs ~3,500bps worse on OM than owned or long-leased capacity, which is most of AWS's.

芯片。外部 Trainium 销售现在已成计划："我们打算在 2027 年末推进"，而 Jassy 预计这将是"一项非常可观的业务"，相比 7 月时"很有可能"的说法有所升级。Graviton 和 Trainium 的收入承诺各自同比增长超过 20 倍，Bedrock 的大部分负载运行在 Trainium 上，而 Bedrock 是"AWS 历史上增长最快的数十亿美元级服务"，Jassy 称其规模有可能达到 EC2 的水平。推理现在占 AWS AI 收入的"远超一半"。在可用寿命方面，Graviton5 发布后，上一代 Graviton 的积压订单环比增长超过一倍，上一代 Trainium 的短期产能售价相较上半年存在溢价。Jassy 还表示，neocloud 产能在运营利润率上比自有或长期租赁产能差 1001#3,500 个基点，而后者占 AWS 产能的大部分。

Margins. EBIT of $28.1B (13.9% OM, a record) beat Street's $26.2B and the $22.5-26.5B guide, and was at the top of the ~$27.5-28B bogeys. The beat over the guide high end shrank to 5.9% from 14.4% in 2Q. NA OM of 7.7% was ~90bps above Street's 6.8%, while International's 3.7% was ~40bps below 4.1%. The +61% y/y is flattered by 3Q25's $2.5B FTC settlement and $1.8B of severance; ex those, OI grew +29%. Shipping costs rose +11% (+8% ex fuel and line-haul) vs. +12% units, and cost to serve per unit fell for a fourth straight year.

利润率。EBIT 为 281 亿美元（利润率 13.9%，创纪录），超过华尔街预期的 262 亿美元和 225-265 亿美元的指引区间，并处于 27.5-280 亿美元预期的高端。超出指引上限的幅度从第二季度的 14.4%缩小至 5.9%。北美利润率为 7.7%，高于华尔街预期的 6.8%达 90 个基点，而国际利润率为 3.7%，低于预期的 4.1%达 40 个基点。由于 2025 年第三季度有 25 亿美元的 FTC 罚款以及 18 亿美元的遣散费支出，同比增幅被高估了 61%；剔除这些因素后，运营收入实际增长了 29%。运输成本上升了 11%（其中燃料和长途运输费用上升了 8%），而产品数量则增长了 12%；此外，每单位产品的服务成本已连续第四年下降。

Ads. Ads of $19.6B grew +10.9% (+12% ex-FX; last q +26.2%) vs. Street $20.9B (+18%); 2Q+3Q combined was +18.1% vs. Street's 21.9%. Mgmt blamed three timing items: Prime Day ("850 basis points sequential impact to Q3 year-over-year growth"), NBA games in 2Q but not 3Q (they return in 4Q), and lapping a 3Q25 search-engine-marketing change; the 850bps is a 2Q-to-3Q swing in the growth rate, not something to add back to 12%. 4Q ads are guided to "the high teens" vs. Street +18.7%. On agents, Jassy answered the question of whether outside horizontal shopping agents are meaningfully hurting Amazon Ads with "The answer is no," and positioned Alexa for Shopping as the primary agent for shopping Amazon while saying AMZN anticipates "working with horizontal agents."

广告业务。196 亿美元广告收入增长 10.9%（剔除汇率影响后增长 12%；上季度增长 26.2%），而华尔街预期为 209 亿美元（增长 18%）；第二季度+第三季度合计增长 18.1%，而华尔街预期为 21.9%。管理层将其归咎于三个时间性因素：Prime Day（"对第三季度同比增长造成 850 个基点的环比影响"）、NBA 比赛在第二季度有而第三季度没有（第四季度回归），以及第三季度搜索引擎营销变化带来的高基数对比；这 850 个基点是第二季度到第三季度增速的摆动，而不是要加回到 12%上的东西。第四季度的广告投放目标群体为"十几岁人群"，而整体市场的这一比例则为 18.7%。关于第三方购物助手是否会对亚马逊的广告业务造成影响，Jassy 回答说"不会"，并称 Alexa for Shopping 才是在亚马逊上进行购物的最佳工具；同时他表示，亚马逊期望能够与各类第三方购物助手展开合作。

Capex. Cash capex net of proceeds was $75.9B (+122% y/y; $77.3B gross) vs. Street $58.2B and $53.1B in 2Q. Part of the jump was payment timing: the build in unpaid P&E fell to $0.9B from $10.7B, so accrual net P&E additions grew a smaller 22% q/q to $78.3B. The ~$220B FY26 guide was reiterated, which implies ~$47.8B in 4Q vs. pre-print Street $64.8B. For 2027 mgmt said "meaningfully more" with no number (pre-print Street $287B, bogeys ~$325-350B), and early post-print Street has moved to

~$312B. P&E purchase commitments are now broken out at $159.6B, $63.9B of it due in 2027.

资本支出。扣除收益后的现金资本支出为 759 亿美元（同比增长 122%；总资本支出为 773 亿美元），而市场预期为 582 亿美元，第二季度为 531 亿美元。这一跃升的部分原因是付款时间安排：未付不动产及设备款项的累积从 107 亿美元降至 9 亿美元，因此应计净不动产及设备增加额环比增幅较小，为 22%，达到 783 亿美元。~$2200 亿的 2026 财年指引被重申，这意味着第四季度为 ~$478 亿，而财报发布前市场预期为 648 亿美元。对于 2027 年，管理层表示“显著增加”，但没有给出具体数字（财报前市场预期为 2870 亿美元，目标区间为 3250-3500 亿美元），而财报后早期市场预期已移至约 3120 亿美元。P&E 采购承诺现已单独列出，为 1596 亿美元，其中 639 亿美元将于 2027 年到期。

FCF. FCF was -$33.5B vs. Street +$1.3B, and TTM FCF fell to -$42.4B from -$7.6B in 2Q. 3Q was funded with $48.1B of long-term debt ($25.0B of July notes, ~$5.6B of sterling notes and a $17.5B term loan), taking LT debt to $173.1B from $65.6B at YE25 against $114.2B of cash and securities. New this quarter is an ~$80B secured supplier loan facility for infrastructure purchases, drawable 1Q27-3Q28. Interest expense tripled to $1.69B from $0.54B. Mgmt's only funding comment was "We can fund this plan," with nothing on equity, and most of the $24.0B "acquisitions and non-marketable investments" outflow was the final $21.3B OpenAI Series C payment.

自由现金流。自由现金流为-335 亿美元，而市场预期为+13 亿美元，过去十二个月自由现金流从第二季度的-76 亿美元降至-424 亿美元。第三季度通过 481 亿美元长期债务融资（250 亿美元 7 月票据、~56 亿英镑票据和 175 亿美元定期贷款），使长期债务从 2025 年末的 656 亿美元增至 1731 亿美元，而现金及证券为 1142 亿美元。本季度新增~800 亿美元担保供应商贷款安排，用于基础设施采购，可于 2027 年第一季度至 2028 年第三季度提取。利息支出从 5.4 亿美元增至 16.9 亿美元，增长了三倍。管理层对于资金筹措问题的唯一表态是“我们有能力为该计划提供资金”，并未提及股权融资的相关事宜。在 240 亿美元的“收购及非市场化投资”支出中，大部分用于支付给 OpenAI 的 C 轮融资款项，共计 213 亿美元。

Retail. Revenue of $201.9B (+12.1%, +13% ex-FX) came in $56M under the $202.0B guide high end, missing Street by 0.2%, the first Street miss since 2Q24. The Prime Day shift into 2Q cost ~400bps, and 2Q+3Q combined growth of +15.7% was in line with Street's 15.8%. NA revenue of $112.9B (+6.2%; last q +16.1%) missed the $113.8B Street mean but was in line with the ~6-6.5% bogey and the $113.2B median; 2Q+3Q combined NA was +11.0%. International was $43.1B (+5.4%, +8% ex-FX). Units grew

+12% (2Q +17%), and Jassy said “some folks are sleeping a bit” on retail.

零售业务。营收 2019 亿美元（同比增长 12.1%，剔除汇率影响后增长 13%），较 2020 亿美元指引高端低 5600 万美元，低于华尔街预期 0.2%，为自 2Q24 以来首次低于华尔街预期。Prime Day 从 3Q 移至 2Q 导致约 400 个基点的损失，2Q+3Q 合计增长 15.7%，与华尔街预期的 15.8%基本一致。北美营收 1129 亿美元（同比增长 6.2%；上个季度的业绩增长率为 16.1%，虽未达到市场预期的 1138 亿美元，但与 1002#6-6.5%的预期水平以及 1132 亿美元的中值相当；第二季和第三季合计的业绩增长率为 11.0%。国际业务方面的营收为 431 亿美元，同比增长 5.4%，扣除外汇因素后则为 8%。产品销量增长了 12%（第二季为 17%），贾西表示，目前有些人在零售业务方面有所懈怠。

Guide. The 4Q revenue guide of $240-247B (+12-16%, ~60bps FX headwind; midpoint $243.5B, +14.1%) sits under Street’s $244.4B at the midpoint, with the high end at the bottom of the ~$247-248B bogeys. The OI guide of $28.5-33.5B (midpoint $31.0B, +24%) is under Street’s $32.9B and ~$1B below the ~$34-35B high-end bogeys. Both ranges widened ($7B / $5B vs. $5B / $4B for 3Q). Leo is the main OI swing: certain costs now start being capitalized in 1Q27, “later than I’ve been predicting,” so most Leo costs stay expensed in 4Q, and fuel is “higher in Q4 than it was in Q3.” For reference, over the last 12 quarters AMZN topped the OI guide high end 10 times

指引。第四季度营收指引为 2400-2470 亿美元（同比增长 12-16%，按 1001#60 个基点的汇率逆风计算；中点为 2435 亿美元，同比增长 14.1%），低于华尔街预期的 2444 亿美元中点，其高端也仅处于 1002#2470-2480 亿美元预测区间的底部。营业利润指引为 285-335 亿美元（中点为 310 亿美元，同比增长 24%），低于华尔街预期的 329 亿美元，并较 1004#340-350 亿美元的高端预测低 1003#10 亿美元。两个数值均有所上升：第三季度分别为 70 亿美元/50 亿美元，而此次则为 50 亿美元/40 亿美元。Leo 业务是导致营运资本变动的主要因素：部分成本将从 2027 年第一季度开始计入资本支出，这一时间“比我之前预计的要晚”，因此与 Leo 相关的多数成本仍会在第四季度作为费用处理；此外，第四季度的燃料成本也“高于第三季度”。作为参考，在过去的 12 个季度中，亚马逊的营运资本数值有 10 次处于预测范围的上限。

Callback. On callbacks, mgmt said it deliberately chose “north of 40%” when told the buyside sat at high-40s to low-50s for FY27 AWS, and said it was surprised expectations had run ahead on third-party data points. Asked several ways about the smaller q/q add, mgmt gave no reason, insisted it has the capacity, and redirected to the 40% outlook. Core AWS margins are ~40%+ and the AI business is in the mid-20s,

with mgmt not forecasting a drop to 35% over the next couple of quarters but saying the full D&A impact hasn't hit yet; training carries lower margins than inference, and Bedrock on Trainium is the favorable piece. Mgmt did reaffirm doubling power from end-2025 to end-2027, with the August NVDA chip commitment inside that doubling rather than on top of it.

电话会。关于电话会，管理层表示，当被告知买方对 FY27 AWS 的预期处于 40%高位至 50%低位时，他们特意选择了"40%以上"，并称对预期因第三方数据点而超前感到意外。在被以多种方式追问环比增量较小时，管理层未给出原因，坚称产能充足，并将话题引回 40%的展望。AWS 核心利润率约为 ~40%以上，AI 业务利润率在 20%中段，管理层并未预测未来几个季度会降至 35%，但表示折旧与摊销的全面影响尚未显现；训练业务的利润率低于推理，而基于 Trainium 的 Bedrock 是有利的部分。管理层确实重申，电力将从 2025 年底到 2027 年底翻倍，8 月对 NVDA 芯片的承诺包含在这一翻倍之内，而非额外增加。

Other points: 2027 capex is only a "meaningful increase" for now; AMZN will not let agents "blindly access" its site but expects to work with horizontal agents; NA retail margin is up 10+pts over the past couple of years with robotics in only ~6 buildings this year; and mgmt hasn't decided how it will report external chip sales, which could bring a TPU-style optics debate next year.

其他要点：2027 年的资本支出目前仅属于"适度增长"水平；亚马逊不会允许代理商"随意访问"其网站，而是希望与那些具备专业能力的代理商合作；过去几年中，北美地区的零售利润率提升了 10 多个百分点，而今年仅有约 1001 座建筑安装了机器人技术；此外，管理层尚未决定如何报告外部芯片的销售情况，这可能会在明年引发关于 TPU 式处理器的新一轮讨论。

The bull thesis is that AMZN owns two businesses that can each reach $1T of revenue, and that the market still values it like a retailer with a cloud attached. AWS is the largest cloud, with a $578B backlog running more than 3x its revenue run rate, and AI adds a second growth engine on top of a core where ~85% of IT spend is still on-prem. As inference becomes most of AI demand (already "well over half" of AWS AI revenue), AWS's enterprise base, Bedrock's multi-model approach and Trainium's cost

advantage matter more than raw frontier-training share. Owned or long-leased capacity (~3,500bps better OM than neocloud capacity, per mgmt) and in-house silicon should keep AWS margins structurally above the AI-infra peer set. On the retail side, regionalization, same-day perishables and robotics have added ~10pts to NA margins in a couple of years with a long runway left, ads compound at high margins, and Prime Video is now profitable.

看涨观点是，AMZN 拥有两项各自都能达到 1 万亿美元营收的业务，而市场仍将其视为一家附带云业务的零售商。AWS 是最大的云，拥有 5780 亿美元的积压订单，超过其营收运行率的 3 倍，而 AI 在核心业务之上增添了第二增长引擎——核心业务中仍有约 85%的 IT 支出留在本地部署。随着推理成为 AI 需求的主要部分（已占 AWS AI 营收的“远超一半”），AWS 的企业客户基础、Bedrock 的多模型方案以及 Trainium 的成本优势，比前沿模型训练份额本身更为重要。AWS 拥有自有或长期租赁的算力资源（据管理层称，其运营效率比 Neocloud 的算力高约 3,500bps），同时还拥有自研的芯片，这些优势有助于使其利润水平始终高于其他 AI 基础设施提供商。在零售业务方面，区域化运营、当日配送的易腐商品处理以及机器人技术的应用，已在几年内为北美地区的利润带来了 1002#10 点的提升；此外，广告业务也能带来较高的利润，而 Prime Video 目前也已实现盈利。

Leo, Trainium sold outside AWS, and ~$289B of Anthropic and OpenAI stakes (~$26 a share before tax) are all optionality beyond core numbers.

Leo，Trainium 在 AWS 之外也有销售；而 Anthropic 和 OpenAI 的持股价值约为 1001#$289B（税前每股约 26 美元），这些都属于超出核心数据范围的潜在价值。

This quarter gave bulls the multi-year AWS visibility they had asked for: “north of 40%” in both 2027 and 2028, reserved gigawatt-scale blocks into 2029, a $82B backlog add with no mega-deal behind it, and early post-print Street FY27 AWS already up ~6% to +42%. Ex energy-derivative gains, AWS OM rose q/q despite D&A at 20% of revenue, and prior-generation chips are pricing at a premium, which answers the useful-life worry. The consolidated OM hit a record 13.9%, NA OM beat by ~90bps, and capex timing (an implied ~$47.8B 4Q) means the FCF hole partly reverses next quarter. Bulls will also look through the ads miss (Prime Day, NBA and SEM timing, with 4Q guided back to high teens) and the 4Q OI guide (Leo expensed one more quarter, with no Leo drag in 2027 once capitalization starts).

本季度给了多头他们一直想要的那种多年期 AWS 可见性：2027 年和 2028 年都“超过 40%”，锁定到 2029 年的吉瓦级预留区块，820 亿美元的积压订单增量背后没有超级大单，以及财报发布后华尔街对 2027 财年 AWS 的早期预期已经上调约 6%至+42%。剔除能源衍生品收益后，尽管折旧与摊销占收入的 20%，AWS 营业利润率仍环比上升，而且上一代芯片正在以溢价定价，这回应了使用寿命方面的担忧。合并后运营利润率创下 13.9%的纪录，北美运营利润率超出预期约 90 个基点，而资本开支的时间安排（隐含第四季度约 478 亿美元）意味着自由现金流的缺口将在下一季度部分逆转。多头也会忽略广告业务的不及预期（受 Prime Day、NBA 和 SEM 时间安排影响，第四季度指引已回升至接近 20%），以及第四季度运营利润指引（Leo 又多计入一个季度的费用，而一旦开始资本化，2027 年将不再有 Leo 拖累）。

Estimate drivers from here are 4Q AWS adds rebounding as capacity lands, GPU repricing flowing into revenue per chip, external Trainium sales in late 2027, and re:Invent in early December as the next catalyst.

预计推动因素包括：随着产能到位，AWS 在第四季度的业绩将有所回升；GPU 价格的上升会提升每颗芯片带来的收入；2027 年底还将有外部市场的销售收益；而 12 月初的 re:Invent 活动也将成为另一个推动因素。

Bear Case

The bear thesis is that AMZN is turning into a capital-intensive utility for AI labs at a time when its retail profit pool faces its first structural threat in years. Capex goes from ~$116B in the year to 3Q25 to ~$220B in 2026 and “meaningfully more” in 2027 (Street ~$312B and rising), FCF stays negative through 2027 (Street FY27 ~-$49B), and the funding has shifted to debt: $181B of face value vs. $69B at YE25, plus an ~$80B secured supplier facility and $160B of P&E purchase commitments. AI margins in the mid-20s vs. core AWS at ~40%+ mean AWS OM drifts lower as AI becomes the mix, and AWS D&A (+63% y/y) is already running ahead of revenue (+39%). The backlog is large but concentrated: OpenAI’s ~$138B and Anthropic’s >$100B of commitments are a big share of it, both labs are cash burners, and Trainium commitments are tied to their success.

看空论点是，AMZN 正在变成 AI 实验室的资本密集型公用事业，而与此同时，其零售利润池面临多年来首次结构性威胁。资本开支从截至 25 年第三季度的年度~$116B 升至 2026 年的~$220B，并在 2027 年“大幅增加”（华尔街预期~$312B 且不断上升），自由现金流到 2027 年持续为负（华尔街 27 财年预期~-$49B），且融资方式已转向债务：面值$181B，而 25 年末为$69B，另有~$80B 的有担保供应商融资和$160B 的物业及设备采购承诺。AI 利润率在 25%左右，而核心 AWS 利润率在 40%以上，这意味着随着 AI 在业务组合中占比上升，AWS 的营业利润率会走低，而且 AWS 的折旧与摊销（同比+63%）已经跑在收入（同比+39%）前面。积压订单规模庞大但高度集中：OpenAI 的 1380 亿美元和 Anthropic 超过 1000 亿美元的承诺占了很大一部分，这两家实验室都在烧钱，而 Trainium 的承诺又与它们的成败绑定。

In retail, agentic shopping threatens the discovery funnel that feeds ads, the FTC’s ad-auction suit is pending, and a TPU-style debate over lumpy, low-margin chip sales arrives in 2027.

在零售领域，代购行为威胁到了用于投放广告的客源获取机制；美国联邦贸易委员会针对广告拍卖机制的诉讼仍在审理中；而关于低利润、质量参差的芯片销售的争议也将在 2027 年再度出现。

This quarter supports the bears on the AWS bar and on cash. AWS missed every buyside number on growth and margin, the q/q add fell ~20% with no explanation on the call or the callbacks, and “north of 40%” lowers buyside curves; 4Q AWS bars dropped to the low-40s from 48-49% pre-call. Mgmt stopped repeating the power-doubling and capacity-shortage lines on the call and dropped the $25B AI and chips run-rate figures, which reads as less transparency right when the bar was highest. Cash capex hit $75.9B, FCF -$33.5B, interest expense tripled, and the only funding answer was “We can fund this plan.” The 4Q guide sits under Street at both midpoints with wider ranges, Leo slipped a second time, ads slowed to +11% reported, and NA missed the Street mean. Bears will argue estimates fall where it matters: buyside FY27 EPS moves to ~$11-12 from $12-13, and the multiple compresses if 2027 capex lands at the top of the bogeys while AWS adds stay near $4B.

本季度在 AWS 业务和现金方面都支持看空观点。AWS 在增长和利润率上未达到买方所有预期，环比增量下降约 20%，而电话会议及后续沟通中均未给出解释，且“40%以上”的表述拉低了买方预期曲线；第四季度 AWS 预期门槛从电话会议前的 48-49%降至 40%出头。管理层在电话会议上不再重复算力翻倍和产能短缺的说辞，也不再提及 250 亿美元 AI 与芯片年化收入数据，这在高预期之际反而显得透明度下降。现金资本支出达到 759 亿美元，自由现金流为-335 亿美元，利息支出翻了三倍，而唯一的融资答案就是“我们可以为这个计划提供资金”。第四季度指引在两个中点上都低于华尔街预期，且区间更宽，Leo 第二次下滑，广告增速按报告口径放缓至+11%，北美业务未达到华尔街均值。空头会主张，下调出现在关键之处：买方对 2027 财年每股收益的预期从 12-13 美元降至 11-12 美元，而如果 2027 年资本支出落在目标区间上沿、同时 AWS 新增支出仍接近 40 亿美元，估值倍数就会压缩。

INTC -25%: Big miss driven by PC inventory flush (CCPG guided down >20% q/q) and the Israel fab outage put the Dec guide ~9% below Street, and 2027 is now a back-half, no-FCF year

INTC：跌幅达-25%。由于个人电脑库存积压，CCPG 的业绩预期环比下降超过 20%；再加上以色列工厂停产，导致该公司 12 月的业绩预期比市场预期低 1001#9%。此外，2027 年也将成为一家没有自由现金流的公司。

Just an ugly print for a stock that was still a crowded long in semis land - focus on the Q3/Q4 Revs and GM miss. Didn’t hear much defending yesterday despite better DCAI. 3Q revenueof $16.51B in line with Street ~$16.5B but missed bogeys of ~$17.2B with GM (44.1%) and EPS ($0.52) ahead, but the Dec guide of $15.0-16.0B / 38.0% GM / $0.25 EPS came in ~$1.5B, ~450bps and $0.18 below Street and well under the ~$17.7-18B / ~44% bogeys.

这只是一份难看的财报，而该股在半导体板块中仍是拥挤的多头——重点关注第三/第四季度营收和毛利率不及预期。尽管 DCAI 表现较好，昨天也没听到多少辩护声音。第三季度营收 165.1 亿美元，与 Street 预期的~165 亿美元一致，但低于~172 亿美元的预期，毛利率（44.1%）和每股收益（0.52 美元）超预期，但 12 月指引为 150-160 亿美元 / 38.0%毛利率 / 0.25 美元每股收益，分别低于 Street ~15 亿美元、~450 个基点和 0.18 美元，也远低于~177-180 亿美元 / ~44%的预期。

DCAI was the standout at $7.32B (+78% y/y, +17% q/q) vs. Street ~$6.6-6.7B and is guided up another mid-teens % to ~$8.4B (Street ~$7.4-7.7B) even with ~$300M of lost Israel output, while CCPG missed by ~$0.8B at $8.10B (-9% q/q) and is guided down >20% q/q as OEMs cut inventory into a memory-driven PC slump (TAM -12% in '26 and -10% in '27, with the correction running through 1Q and maybe into 2Q).

DCAI 表现突出，达到 73.2 亿美元（同比+78%，环比+17%），高于华尔街预期的 66-67 亿美元，并指引再增长十几个百分点至约 84 亿美元（华尔街预期 74-77 亿美元），即便损失了约 3 亿美元的以色列产出；而 CCPG 则低于预期约 8 亿美元，为 81.0 亿美元（环比-9%），并指引环比下降超过 20%，因 OEM 厂商在内存驱动的 PC 低迷中削减库存（2026 年 TAM 下降 12%，2027 年下降 10%，调整将持续到第一季度，可能延续至第二季度）。

The 38% GM guide (~40% ex ~200bps of Israel scrap) a step lower than July's "comfortably into the 40%s" goal, 2026 capex was trimmed to $20B from ">$20B," 2027 capex is "up strongly," and the CFO doesn't expect positive FCF in 2027.

38%的毛利率目标（按以色列废钢价格 1001#200bps 计算，实际约为 40%）略低于 7 月时设定的"40%以上"的目标；2026 年的资本支出从"超过 200 亿美元"下调至 200 亿美元；2027 年的资本支出则预计会有大幅增长；此外，首席财务官认为 2027 年不会出现正的自由现金流。

Bulls are focused on DCAI: the CFO called the Dec-Q run rate (mid-$30Bs annualized) "a good starting point" for 2027 and raised industry server CPU unit growth to >30% in both '26 and '27; bulls will say the client hit is a 2-3 quarter inventory event, not share loss, and that packaging customer announcements are due within two quarters. Bears will of course focus on the big PC miss, point to a supply-gated 1H27 while AMD and ARM take share, a CFO who is "not optimistic" on memory through 2027, dilutive mix (purpose-built silicon, 18A underloading), the foundry capex talk up given no FCF after a $23B raise. Buyside CY27 EPS #s coming down 10-15%.

多头聚焦于 DCAI：CFO 称 12 月季度运行率（年化 300 多亿美元中段）是 2027 年的"良好起点"，并将 2026 和 2027 两年行业服务器 CPU 出货量增长上调至>30%；多头会说客户端受到的冲击是持续 2-3 个季度的库存事件，而非份额流失，且封装客户公告将在两个季度内发布。空头自然会聚焦于 PC 业务的大幅不及预期，指出 2027 年上半年受供应限制，同时 AMD 和 ARM 抢占份额，CFO 对 2027 年全年的内存"不乐观"，存在摊薄性结构（专用芯片、18A 产能利用不足），在 230 亿美元融资后没有自由现金流却大谈晶圆厂资本开支。买方对 CY27 每股收益的预测下调 10-15%。

For AMD (-9%), assuming -25% notebook and desktop units would strip out about

~5% of AMD's revs for Dec Q.

对于 AMD 而言，其业绩降幅为-9%；如果笔记本电脑和台式机的销量分别下降 25%，那么这将导致 AMD 在 12 月份的营收减少约 1001#5%。

Key Takeaways

- **Guide**. The Dec-Q guide of $15.0-16.0B ($15.5B midpoint, -6.1% q/q, +13.4% y/y) is ~$1.5B (~9%) below Street ~$17.0B and ~$2.2-2.5B below the ~$17.7-18B bogeys; even the high end is ~$1B short. The bridge is client: CCPG is guided down >20% q/q (<$6.5B vs. Street ~$8.5B), only partly offset by DCAI up mid-teens % (~$8.4B), and the guide absorbs ~$300M of lost Israel output, almost all 10nm server. That implies FY26 revenue of ~$61.7B (+16.8% y/y) vs. Street ~$63.1B. 3Q was INTC's eighth straight quarter above its own outlook, but the $0.2B (1.3%) beat vs. the guide midpoint was the smallest since the 2Q24 miss (2Q26: 12.8%). In July the CFO said the softer PC market would start to reach INTC in Q4 and that server supply was skewed to Q4, which the buyside read as Q4 upside; the client hit turned out far bigger.

  预测数据：Dec-Q 阶段的预测值为 150 亿至 160 亿美元，其中均值约为 155 亿美元，环比下降 6.1%，同比上升 13.4%。这一数值比市场预期低 15 亿美元，降幅约为 9%；同时，也低于 170 亿美元的预期值，以及 17.7 亿至 180 亿美元的更高预期值，即便按最高预期值计算，也仍少了 10 亿美元。该公司的业绩表现不佳：CCPG 的营收环比下降超过 20%（仅为 65 亿美元，而市场预期为 85 亿美元）。虽然 DCAI 的业务增长了 15%左右（约为 84 亿美元），但这一增长幅度仍不足以弥补损失。此外，以色列市场的业务损失也达到了 3 亿美元，而这些损失几乎都来自 10 纳米制程的服务器产品。因此，2026 财年的营收预计为 617 亿美元，同比增长 16.8%，而市场预期则为 631 亿美元。第三季度是英特尔连续第八个季度实现超出自身预期业绩的季度，但其实际业绩比预期高出 2 亿美元，增幅为 1.3%，这一幅度是自 2024 年第二季度以来最小的（2026 年第二季度的增幅则为 12.8%）。7 月时，英特尔的首席财务官表示，疲软的个人电脑市场状况将在第四季度影响到英特尔的业绩，而服务器供应情况也集中在第四季度，这些因素本应导致第四季度业绩不佳，但实际上业绩表现反而更好。

- **PC outlook**. INTC now sees the 2026 PC unit TAM down ~12% (2H units down >20%) and is planning for another ~10% decline in 2027, weighted to 1H, with possible improvement in 2H against easier compares; in July it called 2026 "down low double-digits" and gave nothing on 2027. Mgmt doesn't expect a sustained

recovery until memory availability and pricing normalize, and the CFO was blunt that “we are not optimistic about next year in terms of memory”; the 10-Q now expects client trends “to worsen in Q4 2026 and persist in 2027,” after the 2Q 10-Q said constraints would “ease over the second half of 2026.” The product side is better: Wildcat Lake units rose ~70% q/q and are sold out, AI PC revenue grew 35% y/y, and 18A is now nearly a third of client CPU revenue (<5% in 1Q). Nova Lake (18A-P) is tracking ahead of schedule with 2x Panther Lake’s design wins at launch and fills INTC’s high-end desktop gap, so mgmt says INTC enters 2027 “as a market share gainer.”

PC 展望。INTC 目前预计 2026 年 PC 单位 TAM 下降约 12%（下半年单位数下降超过 20%），并计划 2027 年再下降约 10%，降幅偏向上半年，下半年在基数较低的情况下可能有所改善；7 月时其称 2026 年“下降低两位数”，且未对 2027 年给出任何指引。管理层预计在内存供应和定价正常化之前不会出现持续复苏，CFO 直言“就内存而言，我们对明年并不乐观”；10-Q 目前预计客户端趋势“将在 2026 年第四季度恶化，并持续到 2027 年”。在第二季度 10-Q 表示限制将在“2026 年下半年逐步缓解”之后。产品方面表现更好：Wildcat Lake 出货量环比增长~70%且已售罄，AI PC 收入同比增长 35%，18A 现在占客户端 CPU 收入的近三分之一（第一季度不到 5%）。Nova Lake（18A-P）进度超前，发布时的设计订单是 Panther Lake 的两倍，并填补了 INTC 在高端台式机领域的空白，因此管理层表示 INTC 将以“市场份额赢家”的姿态进入 2027 年。

Share gains in a TAM down 10% with an inventory flush still leave a much smaller client business in 1H27.

在总市场规模下降 10%且库存仍需消化的情况下，2027 年上半年的客户业务规模将会进一步缩小，因此带来的利润增长也会十分有限。

- **Client**. CCPG revenue of $8.10B (-5% y/y, -9% q/q; last q +13% y/y) missed Street ~$8.9B by ~$0.8B, against a July outlook of “up a bit.” Mgmt blamed memory prices and availability plus “limited IT budgets,” with OEMs cutting inventory aggressively over the last two months of the quarter; customers only began changing build plans with INTC in late August/early September. For 4Q, CCPG is guided down >20% q/q as customers “reduce weeks of inventory” to match their 2027 consumption plans, and the CFO expects a similar correction in 1Q27 on top of normal seasonality, “maybe stretching a little bit into Q2,” before INTC ships in line with sell-through. The correction hurts INTC more than the TAM decline itself:

CPUs had been running ahead of PC units for several quarters, and third-party trackers had 3Q PC units down ~9-14% q/q, among the worst third quarters in 20+ years. CCPG OM still rose to 28.2% (2Q 26.4%) on lower inventory charges.

客户方面：CCPG 的营收为 81 亿美元，同比下降 5%，环比下降 9%；而上一季度的营收则同比增长 13%。这一业绩低于市场预期的 89 亿美元，差距为 8 亿美元。此前 7 月时，市场预计其营收会略有上升。公司管理层将营收不佳的原因归咎于内存的价格与供应状况，以及“有限的 IT 预算”；此外，在该季度的最后两个月里，原始设备制造商们大幅削减了库存；而客户们则是在 8 月底或 9 月初才开始调整他们的采购计划。第四季度，CCPG 指引环比下降超过 20%，因客户“减少数周库存”以匹配其 2027 年消费计划，CFO 预计 2027 年第一季度在正常季节性因素之上还会有类似修正，“可能略微延续至第二季度”，之后 INTC 出货将与 sell-through 保持一致。这一修正对 INTC 的伤害大于 TAM 下滑本身：CPU 出货已连续数个季度领先于 PC 整机，第三方追踪数据显示第三季度 PC 整机环比下降 ~9-14%，为 20 多年来最差的第三季度之一。受库存费用下降的影响，CCPG 的运营利润率仍上升至 28.2%（第二季度为 26.4%）。

The 10-Q shows notebook plus desktop revenue of $6.9B, down $424M y/y on volume -14%, partly offset by ASPs +9% from pricing actions to offset higher input costs plus richer mix; in 2Q the ASP gain was mix, so INTC is now raising client prices into a weakening market.

这份 10-Q 报告显示，笔记本与台式机的总营收为 69 亿美元，由于销量下降了 14%，因此营收同比减少了 4.24 亿美元。不过，由于公司采取了提价措施，产品平均售价上升了 9%，这一因素抵消了部分成本上升的影响，同时产品结构也有所改善。在第二季度时，产品平均售价的上升得益于产品结构的优化；而现在，英特尔仍在经济形势不佳的情况下继续提高产品价格。

- **DCAI.** DCAI revenue of $7.32B (+78% y/y, +17% q/q; last q +59% y/y) beat Street ~$6.6-6.7B by ~$0.6-0.7B, the segment’s strongest growth in 15 years, with OM up ~200bps q/q to 41.5% ($3.0B of operating profit). Growth was broad-based across hyperscale, enterprise and neocloud, purpose-built silicon grew >50% q/q and more than doubled y/y, and Granite Rapids (Intel 3) is now the largest server family and accretive to GM. Per the 10-Q, server revenue rose ~$2.5B y/y on ASPs +54%, mostly premium mix with demand-based pricing a smaller factor, while server volume grew only 10%; other DCAI (mainly purpose-built silicon) was $1.4B,

up $743M y/y.

DCAI。DCAI 营收为 73.2 亿美元（同比+78%，环比+17%；上季度同比+59%），超出华尔街预期的 66-67 亿美元约 6-7 亿美元，为该业务板块 15 年来最强增长，运营利润率环比提升 200 个基点至 41.5%（运营利润 30 亿美元）。增长基础广泛，涵盖超大规模、企业和 neocloud，专用芯片环比增长超过 50%，同比翻倍以上，Granite Rapids（Intel 3）现已成为最大的服务器产品家族，并对毛利率有增厚作用。根据 10-Q 报告，由于平均售价增长了 54%，服务器业务营收同比增长了 25 亿美元；其中高端产品所占比例较高，而基于需求定价的因素影响较小。与此同时，服务器的出货量仅增长了 10%。其他 DCAI 产品（主要是定制设计的芯片）的营收为 14 亿美元，同比增长了 7.43 亿美元。

The 4Q guide calls for another mid-teens % q/q (~$8.4B vs. Street ~$7.4-7.7B) with purpose-built silicon growing faster than the segment, and that's after the ~$300M Israel hit; ex-Israel, DCAI would be up ~19-20% q/q. The CFO said DCAI is on track to finish 2026 nearly $10B above INTC's own plan entering the year, and mgmt raised industry server CPU unit growth to >30% in both 2026 and 2027 (July: "strong double-digit"), adding that growth would be "higher in both years if additional industry supply were available." Clearwater Forest (18A) is shipping with "significant" 2027 demand, Diamond Rapids (18A-P) is sampling for a 2027 ramp, ORCL signed a multiyear Xeon collaboration for OCI, and LBT said multiple customers want long-term supply agreements.

第四季度指引要求环比再增十几个百分点（约 84 亿美元，而华尔街预期为 74-77 亿美元），其中专用芯片增速快于该业务板块整体，而这还是在以色列遭受 3 亿美元冲击之后；剔除以色列因素，DCAI 将环比增长 19-20%。首席财务官表示，DCAI 有望在 2026 年结束时比英特尔年初自己的计划高出近 100 亿美元，管理层还将 2026 年和 2027 年行业服务器 CPU 出货量增长预期上调至超过 30%（7 月为"强劲的两位数增长"），他还表示，如果能有更多的行业供应，那么这两年的增长幅度将会更高。Clearwater Forest（18A）在 2027 年的需求量将会"相当大"；Diamond Rapids（18A-P）也在为 2027 年的需求做准备。ORCL 已与 OCI 签订了多年的 Xeon 产品供应协议，而 LBT 则表示有多家客户希望签订长期供应协议。

- **Supply**. Three things cap DCAI near term: Intel 3 wafer capacity (Granite Rapids is the only Intel 3 product), an industry-wide shortage of the advanced organic substrates used in EMIB packaging, and the Israel outage. The fixes mostly land in 2H27: ~40% more substrate capacity, much of which "does not hit us until the

back half of the year," 18A tools in Oregon (freed up by weaker client demand) converted to Intel 3 with output in 2H27, more Intel 3 tool installs in Ireland, and 18A ramping in Oregon and Arizona (Fab 62). The CFO said supply will be "more challenging" in 1H27 than in 2H and declined to guide 1Q DCAI. He also said 2027 server share will be "a function of supply," and with INTC's 3Q server volume up only 10% y/y against industry units growing >30% (and AMD guiding ~70% revenue growth, as an analyst noted on the call), INTC is already ceding unit share and likely keeps doing so through 2027.

供应。近期有三件事制约着 DCAI：Intel 3 晶圆产能（Granite Rapids 是唯一的 Intel 3 产品）、EMIB 封装所用先进有机基板的行业性短缺，以及以色列停工。相关修复措施大多要到 2027 年下半年才落地：~基板产能增加 40%，其中很大一部分"要到下半年才会落到我们这里"；俄勒冈州的 18A 设备（因客户端需求疲软而腾出）转为 Intel 3，产出在 2027 年下半年；爱尔兰增加更多 Intel 3 设备安装；18A 在俄勒冈州和亚利桑那州（Fab 62）逐步爬坡。首席财务官表示，2027 年上半年的供应状况将会"更加严峻"，相比下半年而言更为困难。他同时拒绝给出第一季度 DCAI 的预测数值。他还称，2027 年的服务器市场份额将"取决于供应情况"。由于英特尔第三季度的服务器出货量仅同比增长 10%，而行业平均水平则超过 30%（另有分析师在电话会议中表示，AMD 的营收增长率预计可达 100-70%），因此英特尔已经在失去市场份额，而且这种情况很可能会持续到 2027 年。

- **Israel**. An accident earlier this month shut Fab 28 for about two weeks, and the CFO expects production to restart by the end of this week. On an early assessment, the guide includes ~$300M of revenue and ~200bps of GM in 4Q, almost all 10nm server, with most of the wafer scrap taken in 4Q. INTC is assuming a similar ~$300M revenue hit in 1Q27 but little additional scrap, so mgmt expects the GM hit to be mostly a 4Q event. The 10-Q is more cautious than the call: it expects scrap, remediation and excess-capacity charges to hit costs and gross profit in 4Q "and through the first half of 2027," says INTC can't yet estimate the total impact or insurance recoveries, and notes that a significant portion of revenue comes from Intel 7 products made in Israel.

以色列。本月早些时候的一场事故导致 Fab 28 停工约两周，首席财务官预计生产将于本周末前重启。根据初步评估，指引中纳入了第四季度约 ~$300M 的收入和~200 个基点的毛利率影响，几乎全部为 10 纳米服务器产品，大部分晶圆报废计入第四季度。英特尔假设 2027 年第一季度会有类似的~$300M 收入冲击，但额外报废很少，因此管理层预计毛利率冲击主要发生在第四季度。10-Q 文件比电话会议更为谨慎：预计报废、修复和产能过剩费用将在第四季度“以及 2027 年上半年”对成本和毛利润造成影响，并表示英特尔尚无法估算总影响或保险赔偿，同时指出相当大一部分收入来自在以色列生产的 Intel 7 产品。

- **Margins**. Non-GAAP GM of 44.1% beat Street (~42%) and the 42% guide by ~210bps (+410bps y/y, +230bps q/q off a 2Q that carried a stranded-inventory write-down), on lower Intel 3 and 18A costs (18A down ~40% since 1Q, Intel 3 ~15%) and better mix. The 4Q guide of 38.0% is ~450bps below Street (~42.5%) and down 610bps q/q, split roughly evenly (~200bps each) among lower revenue on the fixed cost base as client wafer starts are cut, the Israel scrap, and mix, mainly fast-growing purpose-built silicon with below-average GM. Ex-Israel that's ~40%, short of the “comfortably into the 40%s in every quarter” goal mgmt set in July. Opex helped the 3Q beat ($4.05B vs. Street ~$4.3B; OM 19.6% vs. ~16%), and FY26 opex is now ~$16.3B vs. “roughly $16.5 billion” in July, though 4Q steps up to ~$4.4B.

利润率。非 GAAP 毛利率为 44.1%，超出华尔街预期（约 42%）和 42% 的指引约 210 个基点（同比+410 个基点，环比+230 个基点，此前第二季度计入了滞留库存减记），这得益于 Intel 3 和 18A 成本下降（18A 自第一季度以来下降约 40%，Intel 3 下降约 15%）以及更优的产品组合。第四季度指引为 38.0%，较华尔街预期（约 42.5%）低约 450 个基点，环比下降 610 个基点，大致均匀分摊（各约 200 个基点）于固定成本基础上因客户晶圆开工削减而导致的收入下降，以色列业务剔除后，主要是快速增长、目标明确的专用硅片，毛利率低于平均水平。剔除以色列业务后，毛利率约为 40%，未达到管理层在 7 月设定的“每季度轻松进入 40%以上”的目标。运营费用帮助第三季度超出预期（40.5 亿美元，而市场预期为 43 亿美元；运营利润率为 19.6%，而市场预期为 16%），2026 财年运营费用目前约为 163 亿美元，而 7 月时为“大约 165 亿美元”，不过第四季度将升至约 44 亿美元。

- **GM path.** For 2027, the CFO reiterated the 40-60% fall-through rule and said a growth year “should see gross margin expansion,” though “it may not work out every quarter that way.” Tailwinds are Granite Rapids, more Intel 3/18A yield and cycle-time gains, and the Israel scrap not recurring; headwinds are 18A

underloading (partly fixed by the Oregon conversion), Panther Lake still below the corporate average, and purpose-built silicon, packaging and external wafers, which all run below the corporate average. The new emphasis is gross profit dollars over GM %: “We’re just going to grow the gross profit,” which “may put a little pressure on the operating margin percentage through next year.” Rising depreciation from the capex ramp was raised on the call but not addressed directly.

GM 路径。对于 2027 年，CFO 重申了 40-60%的环比递减规则，并表示增长年“应该会看到毛利率扩张”，尽管“可能不会每个季度都如此”。顺风因素是 Granite Rapids、更多 Intel 3/18A 良率和周期时间收益，以及以色列报废不再重现；逆风因素是 18A 产能利用不足（部分通过俄勒冈转换得到解决）、Panther Lake 仍低于公司平均水平，以及定制芯片、封装和外部晶圆，这些均低于公司平均水平。新的重点是毛利美元而非毛利率百分比：“我们就是要增长毛利”，这“可能会在明年对营业利润率百分比造成一些压力”。资本支出攀升带来的折旧增加在电话会议上被提及，但未直接回应。

- **Capex**. 3Q gross capex was $4.2B (~$11.8B YTD). 2026 gross capex is now “on track to be $20 billion” vs. “more than $20 billion” in July, which still implies ~$8.2B in 4Q, nearly double 3Q. For 2027, gross capex will be “up strongly” (July: “significantly above the 2026 levels”), with the number set around year-end; Street was ~$25B before the print, and an analyst on the call said many are thinking ~$30B. Firm equipment POs rose ~40% q/q, nearly all spend outside Ohio is now equipment, and INTC is evaluating a “unique and highly differentiated opportunity” to accelerate Ohio. The 10-Q shows capex commitments of $19.6B and other purchase obligations of $9.8B (vs. $12.8B and $6.7B at year-end), and after the quarter INTC signed two substrate supply agreements requiring ~$5.3-6.1B of funding, ~$3.3B of it by the end of 2027. The small 2026 trim in the middle of a shortage reads like tool lead times and install capacity rather than a choice to spend less.

资本支出。第三季度总资本支出为 42 亿美元（年初至今约 118 亿美元）。2026 年总资本支出目前“有望达到 200 亿美元”，而 7 月时的说法是“超过 200 亿美元”，这仍意味着第四季度约为 82 亿美元，几乎是第三季度的两倍。对于 2027 年，总资本支出将“大幅增长”（7 月时说法为“显著高于 2026 年水平”），具体数字将在年底前后确定；财报发布前，华尔街预期约为 250 亿美元，而一位分析师在电话会议上表示，许多人认为会达到约 300 亿美元。坚定的设备采购订单环比增长~40%，俄亥俄州以外的支出现在几乎全部用于设备，INTC 正在评估一个“独特且高度差异化的机会”以加速俄亥俄州项目。10-Q 显示资本支出承诺为 196 亿美元，其他采购义务为 98 亿美元（年末分别为 128 亿美元和 67 亿美元），且在该季度之后，INTC 签署了两份基板供应协议，要求提供~53-61 亿美元的资金，其中~33 亿美元需在 2027 年底前到位。在供应紧张的背景下，这款 2026 款入门级车型更像是受生产周期和安装能力限制而推出的产品，而非为了降低成本而设计的选项。

- **FCF**. OCF of $5.1B missed Street ~$6.2B (2Q $7.0B), and adjusted FCF was $1.6B including $0.8B of partner contributions. The bigger news is 2027: the CFO called it “an investment year” and “probably not” one with positive FCF, as INTC ramps 18A, expands Intel 3 and spends to start 14A production in 2028, adding that this is why INTC raised $23B in August. INTC ended with $54.0B of cash and short-term investments against ~$50B of debt, upsized its revolver to $15B from $10B, still commits to deleveraging in 2027, and targets at least 20% ROI on each node. The raise lifts 4Q diluted shares to 5.44B from 5.31B in 3Q, which was already ~17% above a year ago, and NCI stays ~$1.1B a year in 2027 and 2028.

自由现金流。51 亿美元的运营现金流低于华尔街预期的 62 亿美元（第二季度为 70 亿美元），调整后自由现金流为 16 亿美元，其中包括 8 亿美元的合作伙伴出资。更大的新闻是 2027 年：首席财务官称其为“投资年”，并且“很可能不会”实现正自由现金流，因为英特尔正在加速 18A 工艺、扩大 Intel 3 产能，并为 2028 年启动 14A 生产投入资金，并补充说这就是英特尔在 8 月筹集 230 亿美元的原因。INTC 最终拥有 540 亿美元现金及短期投资，而债务为 500 亿美元，将其循环信贷额度从 100 亿美元上调至 150 亿美元，仍承诺在 2027 年去杠杆化，并目标在每个制程节点上实现至少 20%的投资回报率。此次融资使第四季度稀释后股数从第三季度的 53.1 亿股增至 54.4 亿股，而第三季度已较一年前高出 17%，且 2027 年和 2028 年非控股权益维持在每年 11 亿美元。

- **Foundry**. Intel Foundry revenue was $6.70B (+58% y/y, +16% q/q), and the operating loss narrowed $236M q/q to $1.85B (OM -27.7% from -36.2%) as Intel 3 and 18A wafer output beat plan. External revenue was $411M (+$118M q/q),

mostly a non-recurring customer program, so there's still no recurring external wafer business. 18A yields are tracking to industry-standard levels ahead of internal plans, 18A-P is on track to launch by year-end with "a couple of highly strategic customers" engaged, and the 14A 0.9 PDK went to select customers in October as promised, with the 1.0 PDK due by 1Q27, risk production in 2027 and production in 2028 (Coral Rapids is the 2028 server part on 14A). The 10-Q no longer says INTC could pause or discontinue 14A without external customers (INTC committed to finishing 14A development in 2Q), but the pace of 14A capacity additions is still "dictated by the amount of committed demand."

代工业务。英特尔代工业务营收为 67.0 亿美元（同比+58%，环比+16%），营业亏损环比收窄 2.36 亿美元至 18.5 亿美元（营业利润率从-36.2%改善至-27.7%），因 Intel 3 和 18A 晶圆产量超出计划。外部营收为 4.11 亿美元（环比+1.18 亿美元），主要来自一个非经常性客户项目，因此目前仍没有经常性的外部晶圆业务。18A 良率正朝着行业标准水平迈进，进度快于内部计划，18A-P 按计划将于年底前推出，并已与"几家极具战略意义的客户"接洽，而 14A 0.9 PDK 已按承诺于 10 月向选定客户发放，1.0 PDK 预计在 2027 年第一季度推出，风险试产在 2027 年，量产在 2028 年（Coral Rapids 是 14A 工艺上 2028 年的服务器产品）。10-Q 不再提及英特尔可能在无外部客户的情况下暂停或终止 14A（英特尔已承诺在第二季度完成 14A 开发），但 14A 产能增加的速度仍"取决于已承诺需求的规模"。

- **Packaging**. LBT said INTC will have a "couple of customer ready to announce in next two quarter," but the line came in the packaging (EMIB) part of his answer; some write-ups attached it to 14A. On callbacks, mgmt added that customers decide when to disclose, with INTC amplifying, and cautioned against assuming near-term announcements from INTC itself. EMIB and EMIB-T have "significant external customer traction," INTC is adding packaging capacity in New Mexico and Malaysia for customer ramps next year, and (per callbacks) server CPUs and EMIB-T compete for the same scarce substrates, with EMIB-T using far more substrate area per part.

封装。LBT 表示 INTC 将有"未来两个季度内准备好宣布的少数客户"，但这句话出现在他回答的封装（EMIB）部分；一些报道将其与 14A 联系在一起。在回访中，管理层补充说客户决定何时披露，INTC 会予以放大，并警告不要假设 INTC 本身会在近期发布公告。EMIB 和 EMIB-T 拥有"显著的外部客户吸引力"，INTC 正在新墨西哥州和马来西亚增加封装产能，以应对明年的客户爬坡，并且（据回访）服务器 CPU 和 EMIB-T 争夺相同的稀缺基板，而 EMIB-T 每颗产品使用的基板面积要大得多。

- **AI**. LBT put a number on the agentic opportunity: server CPU TAM could grow from ~$40B today to >$200B over five years, on the argument that GPUs are "great at thinking tasks" while CPUs are "far more efficient at doing tasks." Purpose-built silicon (custom x86 and ASICs for hyperscalers and AI labs) has tripled over three years and is expected to triple again, and the new GPU D-Series (formerly Crescent Island) inference GPU has customer engagements "progressing towards firm commitments." Clearwater Forest configurations scale beyond 46,000 cores per rack at ~133kW. The TAM figure is the bull case's anchor, but it's an industry number, and INTC's near-term share of it is set by supply.

  AI。LBT 为代理式 AI 机遇给出了一个具体数字：服务器 CPU 的 TAM 可能从如今的~$400 亿增长到五年内的超过$2000 亿，其论据是 GPU"擅长思考任务"，而 CPU"在执行任务上效率高得多"。面向超大规模云厂商和 AI 实验室的定制芯片（定制 x86 和 ASIC）三年内增长了两倍，预计还将再增长两倍，而新的 GPU D 系列（原 Crescent Island）推理 GPU 的客户合作"正朝着坚定承诺推进"。Clearwater Forest 配置每机架可扩展至超过 46,000 个核心，功耗~133kW。TAM 数字是多头论点的锚，但这是一个行业数字，INTC 在其中的近期份额由供应决定。

- **Callback**. Post-call, mgmt's color pointed to a 2H-weighted 2027. Revenue should grow in 2027 but with a heavier 2H skew than INTC's historical ~48/52 split, the PC correction should largely play out in 1H27 (mgmt called it inventory normalization, not a demand recovery), and the >30% server unit growth is the industry, not INTC's shipments. Share over the next 12-18 months depends on supply more than product: INTC has largely exhausted moving Intel 10/7 capacity from client to server, Ireland has space but tool installs are short of qualified electricians, Oregon Intel 3 wafer starts begin around YE26/early 2027 with output in 2H27, and Xeon substrate limits are about volume rather than yield. On demand, Clearwater Forest interest is running ~2.5x available 2027 supply, and engagement on it and the D-Series GPU is well ahead of initial expectations.

电话会议。会后，管理层的表态指向 2027 年权重偏向下半年。2027 年营收应会增长，但下半年权重比 INTC 历史上~48/52 的拆分更重，PC 调整应在 2027 年上半年基本完成（管理层称之为库存正常化，而非需求复苏），而服务器出货量增长超过 30%是整个行业，而非 INTC 的出货量。未来 12 至 18 个月的市场份额更多取决于供应而非产品：INTC 已基本用尽将 Intel 10/7 产能从客户端转向服务器的空间，爱尔兰有场地，但设备安装因合格电工短缺而受阻，俄勒冈州的英特尔 3 号晶圆生产预计将在 2026 年底或 2027 年初开始，成品则会在 2027 年下半年产出。至于至强处理器的生产限制，主要体现在产量上，而非良率方面。据目前了解，Clearwater Forest 公司对这种产品的需求量为 1002 片，2027 年可供应的量也为 2.5 倍于此数。对该产品以及 D 系列 GPU 的需求，远远超出了最初的预期。

Mgmt also said >90% of the ~$300M Israel hit is 10nm-class server and the 1Q number is preliminary, that server ASPs should rise with core counts, and that INTC's price-per-core gap vs. AMD is small (the per-unit gap is mostly AMD's higher core counts).

管理层还表示，在以色列遭受的 10 亿美元损失中，超过 90%涉及的是 10 纳米制程的服务器；第一季度的数值仅为初步数据。随着核心数增加，这类服务器的每单位成本应当会上升。此外，英特尔与 AMD 在每核心成本方面的差距很小（之所以存在差异，主要是因为 AMD 的核心数更多）。

Bull vs. Bear Debate

牛市与熊市之争

Bull Case

The bull case is that agentic AI has turned the server CPU from a mature, share-losing business into INTC's growth engine. Agents need CPUs to orchestrate, call tools and run reinforcement learning, and mgmt now sizes the server CPU TAM at >$200B in five years vs. ~$40B today; on that math even a smaller share leaves DCAI several times its current size, and purpose-built silicon (custom x86 for hyperscalers and labs, on track to triple again) is a second leg. Bulls also see INTC as the only U.S.-based leading-edge foundry with competitive advanced packaging (EMIB-T, Foveros, HBI), which matters more each year for supply-chain security and gives it three new markets (purpose-built silicon, packaging and external wafers) that mgmt calls tens of

billions of dollars each.

看涨观点是，代理式 AI 已将服务器 CPU 从一项成熟且不断丢失份额的业务，转变为英特尔的增长引擎。代理需要 CPU 来编排、调用工具并运行强化学习，而管理层如今预计服务器 CPU 的潜在市场规模将在五年内超过 2000 亿美元，而目前约为 400 亿美元；按此推算，即便份额较小，DCAI 的规模也将是目前的数倍，而专用芯片（为超大规模云厂商和实验室定制的 x86，有望再次增长两倍）则是第二条增长腿。看涨者还认为，英特尔是唯一一家总部位于美国、拥有具有竞争力的先进封装技术（EMIB-T、Foveros、HBI）的领先-edge 代工厂，这一点对供应链安全而言逐年愈发重要，并为其带来三个新市场（专用芯片、封装和外部晶圆），管理层称每个市场规模都达数百亿美元。

They point to execution under LBT: a much leaner cost base, 18A and Intel 3 costs falling fast, a roadmap that gets competitive (Diamond Rapids in 2027, Coral Rapids on 14A in 2028, Nova Lake in client), and a balance sheet rebuilt with $54B of cash. In that view the PC cycle is noise around a structural mix shift, with DCAI becoming INTC's largest product segment in 4Q.

他们指出，在 LBT 架构的推动下，英特尔的成本结构将大幅优化：18A 及 Intel 3 产品的成本会迅速下降；产品发展路线图也更具竞争力——2027 年推出 Diamond Rapids 产品，2028 年推出 Coral Rapids 产品，而 Nova Lake 产品则将面向客户群体推出。此外，英特尔还拥有 540 亿美元的现金储备，其资产负债表状况也得到了改善。从这种视角来看，PC 行业的周期性波动其实只是结构性变化带来的暂时现象，而 DCAI 产品线将在第四季度成为英特尔最大的产品类别。

This quarter gave bulls real evidence on DCAI: +78% y/y and +17% q/q with OM at 41.5%, a mid-teens 4Q guide that absorbs ~$300M of lost output, ~$10B more DCAI revenue in 2026 than INTC planned in January, and a CFO who called the mid-$30Bs annualized run rate a starting point for 2027. Bulls will say the 4Q miss comes from two transitory items, an OEM inventory flush that should run two to three quarters and a fab accident, not from share loss, and that INTC is already redeploying freed-up client capacity in Oregon to Intel 3 server wafers. Estimates could move up on the 2H27 supply unlock (~40% more substrate capacity, Oregon Intel 3, Ireland), server ASPs rising with core counts in a tight market, Clearwater Forest demand that mgmt says is running ~2.5x 2027 supply, GM expansion at the top of the 40-60% fall-through as the Israel scrap and inventory charges roll off, and a re-rating if a packaging, 18A-P or 14A customer goes public.

本季度为看涨者提供了关于 DCAI 的真实证据：同比+78%、环比+17%，营业利润率为 41.5%，第四季度指引为中十几个百分点，消化了~$300M 的产出损失，~2026 年 DCAI 收入比 INTC 在 1 月份计划的多出$10B，而且首席财务官将 300 多亿美元的年化运行率称为 2027 年的起点。看涨者会说，第四季度的不及预期来自两个暂时性因素，即预计持续两到三个季度的 OEM 库存清理和一次晶圆厂事故，而不是份额流失，并且，INTC 已经在将俄勒冈州释放出来的客户端产能重新部署到 Intel 3 服务器晶圆上。随着 2027 年下半年供应瓶颈解除（基板产能增加约 40%、俄勒冈州 Intel 3、爱尔兰），服务器 ASP 在供应紧张的市场中随核心数上升而上涨，管理层称 Clearwater Forest 需求已达到 2027 年供应量的 2.5 倍，随着以色列报废和库存费用逐步消退，毛利率扩张处于 40%-60%传导率的顶端，以及如果封装、18A-P 或 14A 客户公开，则可能迎来重新评级，这些因素都可能推动预期上调。

Bulls expectations have been racheted down a bit after this print but believe INTC can grow revenue ~10% in CY27 to ~$68B (DCAI ~$38B, up ~40% off the ~$8.4B Dec-Q run rate with a 2H supply step-up; CCPG ~$25B, down ~20% on the 1H flush; ~$4.5B from external foundry, packaging and MBLY) and ~25% in CY28 to ~$85B (DCAI ~$50B, up ~30% with industry units still growing; CCPG ~$27B on a 2028 PC recovery and Nova Lake share gains; ~$6B other as packaging and external wafers ramp). At the top of the 40-60% fall-through, GM reaches ~46% in CY28; that's ~$3.00 of CY28 EPS, roughly double CY26's ~$1.48. Bulls would pay ~35x for EPS doubling in two years plus foundry optionality (INTC traded at ~43x CY27 into the print), which implies ~$105, ~50% above the $70 stock is trading at today

在这份财报发布后，市场对英特尔的预期有所下调，但相信英特尔在 2027 自然年能够实现约 10%的营收增长，达到约 680 亿美元（DCAI 约 380 亿美元，较 12 月季度的约 84 亿美元运行率增长约 40%，受益于下半年供应提升；CCPG 约 250 亿美元，因上半年去库存而下降约 20%；外部代工、封装和 MBLY 贡献约 45 亿美元），并在 2028 自然年增长约 25%至约 850 亿美元（DCAI 约 500 亿美元，上涨 ~30%，行业单位仍在增长；CCPG ~270 亿美元，基于 2028 年 PC 复苏和 Nova Lake 份额增长；~其他 60 亿美元，随着封装和外部晶圆放量）。在 40-60%的传导率上限，CY28 毛利率达到 ~46%；这意味着 CY28 每股收益 ~3.00 美元，大约是 CY26 ~1.48 美元的两倍。如果英特尔的每股收益能在两年内翻一番，同时还有相关的衍生品投资机会，那么牛市行情下其估值应为 1018#35 倍。截至报道时，英特尔在 2027 年的预期估值为 1019#43 倍，这意味着其实际估值应在 1020#$105 左右，比目前 70 美元的股价高出 1021#50%。

Bear Case

The bear case is that INTC is a supply-gated share donor in the best server CPU market in years. AMD and the ARM camp are growing far faster, INTC's own roadmap only claims parity with AMD at Coral Rapids on 14A (2028), and mgmt itself says share will be set by supply, which INTC can't add quickly. Client, still more than half of Intel Products revenue in 3Q, is exposed to a memory crunch INTC can't control, and the foundry still loses ~$1.9B a quarter with no named external wafer customer, while 14A depends on landing one. All of this requires capex rising sharply from ~$20B in 2026, with no FCF in 2027, a share count already ~17% higher y/y and rising after the raise, and ~$1.1B a year of earnings going to minority holders, at a valuation (~43x CY27 into the print) that had priced in a successful turnaround.

看空理由是，INTC 是多年来最好的服务器 CPU 市场中的供给受限份额让渡者。AMD 和 ARM 阵营增长快得多，INTC 自己的路线图只声称在 2028 年 14A 工艺的 Coral Rapids 上追平 AMD，而管理层自己也表示份额将由供给决定，而 INTC 无法快速增加供给。客户端业务在第三季度仍占英特尔产品营收的一半以上，却面临 INTC 无法控制的存储芯片短缺，而代工业务每季度仍亏损约 19 亿美元，且没有具名的外部晶圆客户，而 14A 则取决于能否拿下这样一个客户。所有这些因素都将导致资本支出从 2026 年的 1002#$200 亿大幅上升；2027 年则不会产生任何自由现金流。此外，股票数量已同比增加 1003#17%，在资本支出增加后这一比例还会继续上升；每年还有 1004#$11 亿的利润会分配给少数股东。目前的估值约为 2027 年盈利的 43 倍，这一估值已经反映了公司有望实现扭亏为盈的预期。

This quarter supports bears on near-term earnings and on credibility: CCPG went from "up a bit" in July to -9% in 3Q and down >20% in 4Q, mgmt only saw the turn when customers changed build plans in late August, and the CFO expects no memory relief in 2027. GM is back at 38% even with DCAI booming, because mix is moving to lower-margin purpose-built silicon, packaging and external wafers while 18A is underloaded. Bears think the bull math is too optimistic in three places: the mid-$30Bs DCAI starting point assumes supply arrives on time (substrates, Oregon Intel 3, Ireland installs that are short of electricians); a 2H27 PC normalization assumes memory eases, which memory makers don't support; and 40-60% fall-through gets harder as depreciation from $20B+ a year of capex lands. With CY27 EPS models already down ~20% and FCF negative, the multiple can compress toward INTC's ~25x five-year average P/E as the narrative shifts from CPU scarcity to a capex hole.

本季度为看空方提供了关于近期盈利和可信度的论据：CCPG 从 7 月的“小幅上升”变为三季度-9%、四季度下降超过 20%，管理层直到 8 月底客户改变建设计划时才看到转折，而 CFO 预计 2027 年内存压力不会缓解。即便 DCAI 蓬勃发展，毛利率仍回落至 38%，因为产品结构正转向利润率更低的目的定制芯片、封装和外部晶圆，而 18A 产能利用不足。空头认为，看多方的测算在三个地方过于乐观：中段 30 多亿美元的 DCAI 起点假设供应按时到位（基板、俄勒冈 Intel 3、爱尔兰装机都缺电工）；2H27 PC 正常化假设内存供应缓解，而内存厂商并不支持这一假设；随着每年 200 多亿美元资本开支带来的折旧落地，40%-60%的转化率会变得更难实现。在 CY27 EPS 模型已下调约 20%、自由现金流为负的情况下，随着叙事从 CPU 短缺转向资本开支黑洞，估值倍数可能向 INTC 约 25 倍的五年平均市盈率压缩。

In a draonian bear case, bears believe CY27 revenue slips to ~$60B (-3%, against mgmt’s “growth year”), with DCAI ~$33B (up ~20% as 1H stays capped and share slips), CCPG ~$23B (down ~25% as the flush and a -10% TAM compound share pressure from AMD and ARM PCs) and ~$3.5B other, and that CY28 grows only ~12% to ~$67B. With GM stuck around ~41.5% (mix dilution, 18A underloading and depreciation offsetting cost-downs), CY28 EPS is ~$1.50, less than half the bull number and ~50% below current CY28 Street (~$2.8-3.0). At ~30x, still a premium to INTC’s five-year average to credit some foundry optionality, that’s ~$40-45

在德银的看空情境下，空头认为 CY27 营收下滑至~$60B（-3%，与管理层所说的“增长年”相悖），其中 DCAI 为~$33B（上半年仍受限且份额下滑，增长~20%），CCPG 为~$23B（因去库存以及 AMD 和 ARM PC 带来的-10% TAM 复合份额压力，下降~25%），其他业务为~$3.5B，并且 CY28 仅增长~12%至~$67B。在通用汽车（GM）毛利率 stuck 在约 41.5%的情况下（产品组合稀释、18A 产能利用不足以及折旧抵消了成本下降），CY28 每股收益为 1.50 美元，不到看涨预期的一半，且比当前 CY28 华尔街预期（约 2.8-3.0 美元）低约 50%。按 30 倍市盈率计算，仍较英特尔（INTC）五年均值存在溢价，以体现一定的代工业务期权价值，对应股价为 40-45 美元。

SNDK -8%: Overall decent print (best of the night) with better top line and positive mgmt commentary but mixed GM.

SNDK：跌幅为-8%。整体表现尚可，是当晚表现最好的股票；营收表现较好，管理层态度也积极，不过毛利率则表现不佳。

Best print of the night, but not saying much. Bears nitpicking on the GM miss despite top line hitting all bogeys, the CFO “conservative” commentary on March, and the lower price (~+9% implied vs. Street +11% and the +15-18% bogey). Nothing here the change the usual bull vs. bear memory push and pull...Buyside #s not moving much.

今晚最出色的表现，但也没什么值得特别强调的。尽管前线球员的表现都很糟糕，熊派们还是对总经理的决策指手画脚；首席财务官对 3 月形势的评论也被视为“过于保守”；此外，股价涨幅也较低（预期涨幅约为 9%，而市场预期为 11%，另外还有 15-18%的负面预期）。这些因素并不会改变市场上牛派与熊派之间的博弈态势.....多头阵营的势头也没有太大变化。

Details:

F1Q revenue of $11.03B beat Street ($10.74B) and was in line with the ~$10.9-11.2B bogey, but GM of 85.1% beat Street and missed the ~86% bar, and the F2Q guide of $12.2-12.6B / 84.5-85.5% GM / $55-57 EPS beat Street ($12.08B / 84.7% / $52.94) and hit the top of the ~$12.2-12.4B bogey, while the flat GM guide sits well short of the 86.5-87.5% bulls wanted. Datacenter better (+61% q/q) as Edge and Consumer missed. NBMs: no new signings, still 8 customers and the $93.9B floor minimum vs. bulls wanting more than 8 and CFO told the Street to be conservative on March; RPO $88.9B vs. $91.1B pro forma in Aug (some questions around why the q/q step down). ... 8 for 1 stock split coming in November.

第一财季营收 110.3 亿美元，超出华尔街预期的 107.4 亿美元，与 109 亿至 112 亿美元的预期目标一致，但 85.1%的毛利率超出华尔街预期，却未达到 86%的目标线，而第二财季指引为 122 亿至 126 亿美元营收 / 84.5%至 85.5%毛利率 / 每股收益 55 至 57 美元，超出华尔街预期（120.8 亿美元 / 84.7% / 52.94 美元），并触及 122 亿至 124 亿美元预期目标的上限，而通用汽车的扁平指引远低于多头想要的 86.5-87.5%。数据中心表现更好（环比增长 61%），而边缘和消费业务未达预期。NBM：没有新签约，仍是 8 个客户，最低保底金额为 939 亿美元，而多头希望超过 8 个，且首席财务官告诉华尔街在 3 月要保守；RPO 为 889 亿美元，而 8 月备考为 911 亿美元（有人质疑为何环比下降）。.....11 月将进行 8 比 1 的股票拆分。

Sep-Q revenue of $11.03B (+23% q/q) beat Street’s $10.74B and landed in the ~$10.9-11.2B bogey, EPS of $49.51 beat ($46.73), and the Dec-Q guide ($12.2-12.6B / 84.5-85.5% GM / $55-57) beat Street, but implied pricing of ~+9% and a flat ~85% GM guide fell short of what bulls wanted.

9 月季度营收 110.3 亿美元（环比增长 23%），超出华尔街预期的 107.4 亿美元，落在 109 亿至 112 亿美元的指引区间内；每股收益 49.51 美元，超出预期的 46.73 美元；12 月季度指引（122 亿至 126 亿美元 / 毛利率 84.5%至 85.5% / 每股收益 55 至 57 美元）也超出华尔街预期，但隐含定价上涨约 9%以及毛利率指引持平于 85%，未能达到多头的期望。

Buyside numbers not moving much after this with most still at $300+ for CY27, which means stock trading at 4-5x pre-market.

此后，该股的买盘价格几乎没有变化，大多数人的预期仍是 2027 财年的股价在 300 美元以上，这意味着该股的交易估值相当于其预期盈利的 4 到 5 倍。

Key Takeaways

Pricing. Volume drove ~60% of the +23% q/q and price ~40%, which implies ~+9% pricing and ~+13% bits vs. Street ASP +11% / bits +8% and the +15-18% pricing bogey; in June the split was two-thirds price. That ~+9% came from the same “modest price increases” mgmt guided for Sep-Q in August, so “modest” has meant high-single digits, and on callbacks mgmt defined it as “not double digits.” For Dec-Q the GM guide “includes modest like for like price increases,” and the CFO expects “pricing to continue to increase modestly throughout the year” (FY27 ends in June 2027). Peers are capturing more (Samsung’s NAND ASPs rose high-teens in its Sep-Q), and on read from sell side is that SNDK is “undergrowing on price vs memory peers,” partly by design, with half of FY27 bits under NBMs whose variable pricing carries floors and ceilings.

定价。销量推动了环比增长 23%中的~60%，价格贡献了~40%，这意味着~定价+9%和~钻头+13%，而华尔街平均售价预期为+11%、钻头+8%，以及+15-18%的定价目标；6 月份的分拆是三分之二来自价格。那个~+9%来自管理层 8 月份对 9 月季度的“适度提价”指引，所以“适度”意味着高个位数，而在回电中管理层将其定义为“不是两位数”。对于 Dec-Q，通用汽车指南“包含适度的同比价格上调”，首席财务官预计“定价将在全年持续温和上涨”（FY27 截至 2027 年 6 月）。同行正在获取更多涨幅（三星的 NAND ASP 在其 Sep-Q 上涨了十几个百分点），而卖方的一种解读是，SNDK“在价格增长上落后于内存同行”，部分是有意为之，因为 FY27 约一半的比特量处于 NBM 之下，其可变定价带有下限和上限。

Callback. The most useful callback color: (1) NBM extensions are separate contracts,

with pricing and bit commitments renegotiated at prevailing market levels, so re-ups reprice the book rather than extending old economics, and mgmt prefers a few deep relationships to a long customer list. (2) “Modest” pricing means not double digits, with both bits and price contributing each quarter through FY27. (3) FY27 bits are tracking the high end of mid-to-high teens and FY28 could reach the low 20s, but supply plans are unchanged, node transitions can’t be pulled in, and mix shifts take ~120 days. (4) Cost per bit should be roughly flat through FY27; DRAM is covered by inventory already built and the Nanya agreement, and floor pricing still supports ~80% GM after expected cost increases. (5) March conservatism is about seasonality in the non-DC businesses.

电话会。最有用的回调信息：（1）NBM 扩展是单独的合同，定价和比特承诺按现行市场水平重新谈判，因此续约是对账本重新定价，而不是延续旧的经济条款，管理层更倾向于少数深度合作关系而非长长的客户名单。（2）“温和”定价意味着不是两位数，比特和价格在 FY27 各季度都有贡献。（3）FY27 比特跟踪中高 teens 的高端，FY28 可能达到低 20s，但供应计划未变，节点转换无法提前，产品组合变化需要约 120 天。（4）每比特成本在 FY27 应大致持平；DRAM 由已建立的库存和南亚协议覆盖，且地板价在预期成本上涨后仍支撑约 80%的毛利率。（5）3 月的保守主义是关于非数据中心业务的季节性。

(6) Customers do extensive forecasting and mix planning before signing, so attrition risk after signing is low; demand from existing customers now competes with new ones, and coverage should run above 2/3 into FY29. (7) There’s no credit-related change in demand, which mgmt sees as stronger than a quarter ago.

(6) 客户在签约前会进行充分的预测与组合规划，因此签约后的客户流失风险较低；现有客户的需求会与新客户的需求相互竞争，预计到 2029 财年时，现有客户的占比应能超过 2/3。 (7) 客户需求方面没有出现与信用状况相关的变化，管理层认为这一情况比上一季度更为良好。

Margins. Non-GAAP GM of 85.07% was 62bps above Street’s 84.45%, 43bps below the low end of the 85.5-86.5% bogey and up only 43bps q/q, because cost per bit rose with DRAM and other non-NAND content in enterprise SSDs and a richer eSSD mix (sell-side puts unit costs up ~MSD-6% q/q). The Dec-Q guide of 84.5-85.5% (85.0% midpoint) is flat q/q, 31bps above Street’s 84.69% and 150bps under the 86.5-87.5% bogey. Mgmt guided Sep-Q to 83-85% on “prudent assumptions… on component cost” and printed 85.1%, so there may be cushion again, but the ceiling is the focus: in August the CEO called mid-80s GM “a fair return,” and the Investor Day model has ~80% GM for FY28-30. Opex of $513M was under the $520-540M guide,

and OM of 80.4% beat Street's 79.5%.

利润率。非 GAAP 毛利率为 85.07%，较华尔街预期的 84.45%高出 62 个基点，较 85.5-86.5%目标区间的低端低 43 个基点，环比仅上升 43 个基点，原因是每比特成本随企业级 SSD 中 DRAM 及其他非 NAND 内容以及更丰富的 eSSD 组合而上升（卖方估计单位成本环比上升约中个位数至 6%）。12 月季度指引为 84.5-85.5%（中值 85.0%），环比持平，比 Street 预期的 84.69%高出 31 个基点，但比 86.5-87.5%的目标区间低 150 个基点。管理层基于"对组件成本的审慎假设"将 9 月季度指引定为 83-85%，实际公布为 85.1%，因此可能再次留有缓冲空间，但上限才是关注焦点：8 月份 CEO 称 85%左右的中期毛利率是"合理回报"，而投资者日模型显示 2028-2030 财年毛利率为 80%。运营支出为 5.13 亿美元，低于 5.20-5.40 亿美元的指引，运营利润率为 80.4%，超过 Street 预期的 79.5%。

Costs. Mgmt expects blended cost per bit to stay roughly flat through FY27, with DRAM the pressure point; it has built DRAM inventory and holds a multi-year supply agreement with Nanya. Mgmt has also said underlying NAND cost-downs have halved to ~7-8% a year from ~15% historically as node transitions get more expensive and slower. That cuts both ways: it caps SNDK's margin expansion from here, but it also slows industry supply growth, which is the bulls' durability argument.

成本。管理层预计，到 FY27，混合单位比特成本将大致持平，其中 DRAM 是压力点；公司已建立 DRAM 库存，并与南亚科技签订了多年供应协议。管理层还表示，随着制程节点过渡变得更昂贵、更缓慢，NAND 的基础成本下降幅度已从历史上的~15%减半至每年~7-8%。这是一把双刃剑：它限制了 SNDK 从当前水平的利润率扩张，但也减缓了行业供应增长，而这正是多头关于持久性的论点。

Datacenter. DC revenue of $4.80B, +61% q/q (last q +103%) and ~17x y/y, beat Street's $4.00B (+34%), reached 43.5% of revenue (33.2% in June) and drove ~88% of the q/q revenue add as SNDK "allocated more supply" to DC across three U.S. hyperscalers. Mgmt credited BiCS8/CBA, a TLC eSSD line that has been in market for years, and the QLC "Stargate" platform, whose qualifications are "100% behind us" with customers ramping; the TLC/QLC mix stays ~70/30 through FY27. SNDK's DC mix is still catching up to the industry's (DC is "roughly half of the industry bits today" vs. ~20% early in the decade), and mgmt expects a "substantially higher" mix through CY27. The CY27 outlook is DC bit demand up ~40% after more than doubling in 2026, with DC above 55% of the market; mgmt sizes inference and agent-orchestration demand at 60-90GB of NAND per CPU and sees KV cache at ~one-third of AI DC

flash by decade-end.

数据中心。DC 营收为 48.0 亿美元，环比增长 61%（上一季度环比增长 103%），同比增长约 17 倍，超出华尔街预期的 40.0 亿美元（同比增长 34%），占营收的 43.5%（6 月为 33.2%），并贡献了环比营收增量的约 88%，因 SNDK 向三家美国超大规模云厂商“分配了更多供应”到 DC。管理层将此归功于 BiCS8/CBA、一条已上市多年的 TLC eSSD 产品线，以及 QLC“Stargate”平台，其认证已“100%完成”，客户正在放量；TLC/QLC 的配比在 FY27 全年维持在 ~70/30。SNDK 的数据中心（DC）配比仍在追赶行业水平（如今 DC 约占行业位元的“一半左右”，而本十年初期仅为 ~20%），管理层预计到 CY27 该配比将“大幅提高”。CY27 展望为：DC 位元需求在 2026 年翻倍以上之后增长 ~40%，DC 占市场比重超过 55%；管理层估算推理与智能体编排需求为每颗 CPU 对应 60-90GB 的 NAND，并预计到本十年末 KV 缓存将占 AI 数据中心闪存的 ~三分之一。

Short-term reallocation has limits, since a wafer takes ~120 days and die mix comes out of the fab fixed.

短期重新分配是有限度的，因为一个晶圆的生产需要 1001#120 天，而且芯片的混合比例在工厂生产完成后就无法再改变。

Edge. Edge revenue of $5.83B (+7% q/q; last q +48%) missed Street’s $6.08B (+12%) on “contraction at the lower end,” partly offset by premium and mainstream resilience and strong auto and IoT, and Consumer of $397M (-29% q/q after -32% in June; -39% y/y) missed Street’s $584M “as the market adjusts to higher pricing.” Edge fell to 53% of revenue from 61%, partly by choice as supply moved to DC, but some on the sell-side read the trend as digestion and demand destruction after a hot 1H. The incremental change is the unit outlook: mgmt now sees PC and phone units “slightly down next year, low single digits” vs. “units flattening out” in August, with the current two quarters “the trough of the year-over-year compares,” though it still expects exabytes to grow in every segment in CY27 on content per device. That landed the same night INTC said it sees 2026 PC units down ~12% (2H down >20%) with no sustained recovery until memory availability and pricing normalize.

边缘业务。边缘业务营收为 58.3 亿美元（环比+7%；上季度环比+48%），低于华尔街预期的 60.8 亿美元（+12%），原因是“低端市场收缩”，部分被高端和主流市场的韧性以及汽车和物联网的强劲表现所抵消；消费者业务营收为 3.97 亿美元（环比-29%，6 月为-32%；同比-39%），低于华尔街预期的 5.84 亿美元，“因市场正在适应更高的定价”。边缘业务占营收比例从 61%降至 53%，部分出于主动选择，因为供应转向了数据中心，但一些卖方将这一趋势解读为上半年火热之后的消化和需求破坏。增量变化在于单位展望：管理层现在认为 PC 和手机单位“明年略有下降，低个位数”，而 8 月时的说法是“单位趋于持平”，并称当前两个季度是“同比比较的谷底”，不过仍预计在 CY27，凭借单设备内容量，各细分领域的艾字节数都将增长。这一消息与 INTC 当晚的表态如出一辙：INTC 称其预计 2026 年 PC 单位下降~12%（下半年下降>20%），在内存供应和定价恢复正常之前不会出现持续复苏。

NBMs. No new NBMs were signed: the two Sep-Q closes were announced in August, so it’s still 8 customers, the $93.9B minimum at floor pricing is unchanged (no contract value was added in the quarter), and RPO fell to $88.9B from the $91.1B August pro forma as contracted bits shipped. Coverage is “~1/2” of FY27 bits (August: “more than 50%”) and ~2/3 of FY28, which mgmt expects to go “a little bit higher,” backed by $16.5B of guarantees and a 4+ year weighted duration (up to 5). Mgmt says the pipeline “exceeds our supply” through the end of the decade, multiple customers are “coming back for a second round” after underestimating their NAND needs, 95% of NBM counterparties are investment grade (~$130B of operating cash flow), and more NBMs come “over the next several months, several quarters.” The RPO decline never came up on the call and was the main open question in overnight investor chats.

NBM。没有签署新的 NBM：两个 9 月季度末的合同是在 8 月宣布的，所以仍然是 8 个客户，按底价计算的 939 亿美元最低值没有变化（本季度没有增加合同价值），并且随着已签约部分发货，RPO 从 8 月备考的 911 亿美元降至 889 亿美元。覆盖率是 FY27 部分的“约 1/2”（8 月为“超过 50%”），以及 FY28 的~2/3，管理层预计这一比例会“略高一些”，背后有 165 亿美元的担保和 4 年以上的加权期限（最高 5 年）支撑。管理层表示，到本世纪末，该产品的供应量“仍将无法满足需求”；许多客户在低估了自己的 NAND 需求后，现在又“回来再次采购”；95%的 NBM 合作方都属于投资级企业，其运营现金流约为 1300 亿美元；此外，未来几个月乃至几个季度内还会有更多 NBM 企业加入合作。在电话会议中并未提及 RPO 下降的问题，而这正是投资者们在夜间讨论时的主要疑问。

With COGS at ~15% of revenue, an ~80% GM floor implies NBM floor prices roughly 25% below current pricing, which is how much downside protection the contracts actually give.

由于成本占收入的 1001#15%，若毛利率至少为 1002#80%，那么 NBM 产品的最低售价应比当前价格低约 25%，这也就是这些合同所能提供的实际风险保护幅度。

Supply. Mgmt held bit growth at “mid to high teens” with “no plans” to accelerate the move from BiCS8 to BiCS9/10 (BiCS10 is “still a little ways out”), and capex at a mid-single-digit % of FY27 revenue (August: ~6%) after $378M of gross capex in Sep-Q (3.4% of revenue; cash capex 1.8%). On callbacks mgmt pointed to the high end of that range for FY27, up from “mid-teens” sellable bits in August when it was building inventory for NBMs, and possibly low-20s in FY28. Mgmt said the NBM book could eventually support “changing supply,” but “we’re just not there yet.”

供应方面。管理层将比特增长维持在“十几到二十几的中段”，并“没有计划”加快从 BiCS8 向 BiCS9/10 的过渡（BiCS10“还有一段距离”），在 9 月季度 3.78 亿美元的总资本支出（占营收 3.4%；现金资本支出 1.8%）之后，资本支出占 FY27 营收的中个位数百分比（8 月：~6%）。在回访中，管理层指出 FY27 将处于该区间的上端，高于 8 月时为 NBM 备货所给出的“十几的中段”可售比特，FY28 可能达到二十出头。管理层表示，NBM 订单簿最终可能支持“改变供应”，但“我们还没到那一步。”

SLC. The newest topic on the call: customers are asking about high-endurance SLC NAND for agentic inference, including as a DRAM substitute where endurance and performance are good enough, given a “20x-40x” cost differential. It’s “not really in sales yet,” but SLC mode carries a 3:1 or 4:1 trade ratio vs. TLC/QLC, so “a little bit of SLC is a lot of QLC” and even modest adoption would absorb wafer capacity and tighten industry supply. Mgmt sees it as TAM expansion rather than cannibalization and needs no new capacity, since its cells can run in SLC, MLC or TLC mode. HBF hit its first milestone (first memory die taped out, fabrication underway), samples stay on track for next calendar year, and it remains outside the long-term model.

SLC。电话会议上的最新话题：客户正在询问用于代理式推理的高耐久性 SLC NAND，包括在耐久性和性能足够好的情况下作为 DRAM 替代品，考虑到“20 倍至 40 倍”的成本差异。它“尚未真正进入销售阶段”，但 SLC 模式相对于 TLC/QLC 具有 3:1 或 4:1 的交换比，因此“一点点 SLC 就相当于大量 QLC”，即便只是适度采用也会吸收晶圆产能并收紧行业供应。管理层将其视为 TAM 扩张而非蚕食，且无需新增产能，因为其单元可以在 SLC、MLC 或 TLC 模式下运行。HBF 达到了首个里程碑（首颗存储芯片流片，制造正在进行中），样品仍按计划在下一日历年推出，并且它仍不在长期模型之内。

Guide. Dec-Q revenue of $12.2-12.6B ($12.4B midpoint, +12.4% q/q on the new base, +310% y/y) beat Street's $12.08B and hit the top of the ~$12.2-12.4B bogey, and EPS of $55-57 ($56 midpoint, +13% q/q) beat Street's $52.94 and sits at the top of the ~$54-56 bogey, on ~151M diluted shares, $540-560M of opex and a 14.3% tax rate. Part of the step-up is Consumer seasonality (last year's Dec-Q Consumer was $907M vs. $652M in the Sep-Q). For March, the CFO said "I would be conservative in your sequential growth from Q2 to Q3," citing a 19% q/q bit decline in last year's March quarter, and on callbacks he tied it to non-DC seasonality.

指引。12 月季度营收为 122 亿至 126 亿美元（中值 124 亿美元，按新基准环比增长 12.4%，同比增长 310%），超过华尔街预期的 120.8 亿美元，并达到~122 亿至 124 亿美元目标区间的上限；每股收益为 55 至 57 美元（中值 56 美元，环比增长 13%），超过华尔街预期的 52.94 美元，并位于~54 至 56 美元目标区间的上限，基于~1.51 亿稀释股数、5.4 亿至 5.6 亿美元的运营支出以及 14.3%的税率。增长的部分原因在于消费领域的季节性因素（去年 12 月至今年 3 月的消费者支出为 9.07 亿美元，而 9 月至 12 月则为 6.52 亿美元）。对于 3 月的数据，首席财务官表示：“对于从第二季度到第三季度的环比增长幅度，我会持谨慎态度”，因为他指出去年 3 月的环比增幅为负 19%，并且他将这一现象归因于非直流相关的季节性因素。

Cash. Adj FCF of $5.70B (51.6% margin) missed Street's $5.93B as receivables rose ~$1.9B on customer mix (mgmt's explanation) and NBM prepayments and deposits fell to $465M from $1.94B in June; reported FCF was $6.31B. SNDK bought back $5.0B (~3.2M shares at ~$1,560) vs. $4.5B in June, 6.0M shares or ~4% of the count over two quarters, leaving $10.5B of authorization and $5.1B of cash with no debt. Mgmt reiterated 100% of excess cash to shareholders and staying debt-free rather than levering up, and on a re-up said "we know how to get a hold of the board"; it has previously framed the remaining authorization as 2-5 quarters of buybacks. At ~$1,220, $5B a quarter retires ~2.7% of the shares, ~11% a year, though bulls want something bigger than $5B. The board also approved an 8-for-1 split (shares

distributed Nov 19, split-adjusted trading from Nov 20)

现金。调整后自由现金流为 57.0 亿美元（利润率 51.6%），低于华尔街预期的 59.3 亿美元，因应收账款因客户结构（管理层的解释）增加 19 亿美元，且 NBM 预付款和存款从 6 月的 19.4 亿美元降至 4.65 亿美元；报告的自由现金流为 63.1 亿美元。SNDK 回购了 50 亿美元（约 320 万股，每股 1,560 美元），而 6 月为 45 亿美元，两个季度共 600 万股，约占股份总数的 4%，剩余 105 亿美元授权额度和 51 亿美元现金，且无债务。管理层重申将 100%的超额现金返还股东，并保持无债务状态，而非加杠杆，在续期问题上表示"我们知道如何联系董事会"；此前曾将剩余授权额度描述为可支撑 2 至 5 个季度的回购。按~$1,220 计算，每季度 50 亿美元可回购~2.7%的股份，~每年 11%，不过看涨者希望规模超过 50 亿美元。董事会还批准了 1 拆 8 的拆股（11 月 19 日分派股份，11 月 20 日起按拆股调整后交易）

The bull thesis is that AI inference has turned NAND from a device commodity into data center infrastructure, and that the industry has finally structured itself to keep the economics. DC has gone from ~20% of industry bits early in the decade to roughly half today and above 55% in CY27, with DC bits up ~40% next year on KV cache, context and retrieval tiers that grow with token volumes. Supply is disciplined: SNDK grows bits only through node transitions at mid-to-high teens, capex is a mid-single-digit % of revenue, cost-downs have halved to ~7-8% a year, and new tiers (SLC at 3-4x trade ratios, HBF) would absorb wafers. The NBMs are the structural change: ~1/2 of FY27 and ~2/3 of FY28 bits are contracted for 4-5 years with investment-grade counterparties, $16.5B of guarantees and floor pricing that still yields ~80% GM, so the downside that justifies a 5x memory multiple is contractually smaller than in any prior cycle. Add BiCS8/CBA leadership with three U.S.

看涨论点是，AI 推理已将 NAND 从一种设备商品转变为数据中心基础设施，而该行业终于通过结构调整保住了经济效益。数据中心占行业比特的比例已从本十年初的约 20%升至如今的约一半，并在 CY27 超过 55%，其中数据中心比特明年增长 40%，得益于随代币量增长的 KV 缓存、上下文和检索层级。供应端保持自律：SNDK 仅通过节点转换实现比特增长，增速为中高十位数，资本支出占收入的中间个位数百分比，成本下降速度已减半至每年 7-8%，以及新的层级（SLC 以 3-4 倍贸易比率、HBF）将吸收晶圆。NBM 是结构性变化：FY27 的~1/2 和 FY28 的~2/3 的位数已与投资级交易对手签订 4-5 年合同，165 亿美元的担保和底价仍能实现~80%的毛利率，因此支撑 5 倍内存倍数的下行风险在合同层面比以往任何周期都更小。再加上 BiCS8/CBA 的领先地位以及三个美国

hyperscalers, HBF as a free option, a debt-free balance sheet and 100% of ~50% FCF margins going to buybacks, and bulls see a contracted cash compounder priced like a peak-cycle commodity.

这些超大型企业将 HBF 作为免费选项使用，拥有无债务的资产负债表；同时，其 100%的 FCF 利润都会用于股票回购。看多人士认为，这类企业的现金流增长速度会放缓，其股价也应被视作处于周期高峰阶段的商品来定价。

This quarter gave bulls more on duration than on near-term upside. DC beat Street by $0.8B and is gaining mix, FY27 bit growth moved from mid-teens toward high-teens with low-20s possible in FY28, and customers who “underestimated” their NAND needs are back for second tranches, which are new contracts priced at prevailing market levels, so re-ups reprice the book upward. FY28 coverage is heading above 2/3 with a pipeline that exceeds supply through 2030, and mgmt says demand is “strengthening.” The GM guide likely carries cushion again (83-85% guided, 85.1% printed on “prudent” cost assumptions), and “modest” pricing has meant ~9% a quarter, which on high-teens bits still compounds revenue fast. Estimates went up across the sell-side and slightly less on buyside. NBM signings over the “next several months,” another buyback authorization, SLC interest turning into orders, HBF samples in 2027 and peers confirming Dec-Q contract pricing.

本季度给多头带来更多的是久期而非近期上行空间。数据中心业务比华尔街预期高出 8 亿美元，且占比正在提升；2027 财年比特增长预期从百分之十几中段上移至百分之十几高段，2028 财年有可能达到百分之二十出头；那些“低估”自身 NAND 需求的客户正回来洽谈第二批采购，这些是新合同，按当前市场价格定价，因此续约将账面价格向上重估。2028 财年覆盖率正迈向三分之二以上，且到 2030 年管道需求超过供给，管理层称需求正在“增强”。通用汽车指南可能再次留有缓冲（按“审慎”成本假设，指引完成度为 83-85%，印刷值为 85.1%），而“温和”定价意味着每季度~9%，在十几位数的比特量上，这仍能推动收入快速增长。卖方普遍上调了预期，买方上调幅度略小。未来“几个月内”将签署 NBM 协议，另有回购授权，SLC 兴趣正转化为订单，HBF 样品将于 2027 年推出，同行也证实了 12 月季度合同定价。

The bear thesis is that NAND is still a cycle and the second derivative has turned. SNDK's q/q pricing went +139%, +31%, ~+9% and now "modest," memory equities historically peak with the rate of change in pricing, and GM has flattened at ~85%, a level mgmt itself calls "a fair return" and above its own ~80% long-term model, in which FY28-30 revenue grows only with bits (i.e., flat pricing). Costs are rising (DRAM content in eSSDs, slower cost-downs), NBM ceilings cap upside while peers capture more of the market (Samsung's NAND ASPs rose high-teens this quarter), and the edge is showing demand destruction: Consumer -39% y/y, Edge share falling, PC and phone units down again in CY27, and INTC blaming memory for a falling PC TAM. Every NAND supplier is earning record margins, and history says supply follows with a lag: Samsung, SK Hynix, Kioxia and YMTC all have node and wafer levers, and China is a 2028-30 pricing risk.

空头论点是，NAND 仍是一个周期，且其二阶导数已经转向。SNDK 的环比定价依次为+139%、+31%、+9%，如今则是“温和”，而存储类股票历来在定价变化率见顶时见顶，且毛利率已在 85%附近走平，管理层自己称这一水平是“合理回报”，并高于其自身 80%的长期模型，而在该模型中，FY28-30 收入仅随比特数增长（即定价持平）。成本正在上升（eSSD 中的 DRAM 含量、成本下降放缓），NBM 上限限制了上行空间，而同行则抢占更多市场份额（三星本季度 NAND ASP 上涨了近 20%），边缘侧正显现需求破坏：消费类同比下降 39%，边缘份额下降，CY27 年 PC 和手机出货量再次下滑，而 INTC 将 PC TAM 下滑归咎于内存。每家 NAND 供应商都在赚取创纪录的利润率，历史表明供应会滞后跟进：三星、SK 海力士、铠侠和长江存储都拥有制程和晶圆杠杆，而中国是 2028-30 年的定价风险。

With DC now ~44% of revenue and the only growth driver, SNDK is also more exposed

to an AI capex digestion and to a handful of hyperscaler and lab customers.

由于数据中心业务目前占公司营收的 1001#44%，且是公司唯一的增长动力，因此 SNDK 更容易受到人工智能相关资本支出变动的影响，同时也更依赖少数大型企业及实验室客户。

This quarter supports that read. Pricing came in below Street, the bogey and peers; GM is guided flat with pricing rising only modestly through June; no NBMs were signed and RPO fell; Edge and Consumer missed; the CY27 unit outlook is worse than in August; March is guided “conservative”; and FCF missed on receivables. The bull assumptions that look too optimistic: extensions at “prevailing” prices only reprice upward if prevailing prices keep rising; “pipeline exceeds supply” is pipeline, not contracts, and it produced no signings in a quarter when customers supposedly can’t get enough; SLC and HBF are architecture conversations with no revenue; and high-teens bits on flat GM means EPS growth now comes from volume and buybacks, which is what a late-cycle earnings path looks like. Estimates compress if Dec-Q contract pricing proves to be the last meaningful increase, if non-NBM pricing (about half of FY27 bits) turns down in 2H27, or if GM converges on the 80% model.

本季度业绩支持这一解读。定价低于华尔街预期、目标价和同业水平；毛利率指引持平，且到 6 月定价仅小幅上升；未签署任何新业务模式（NBM）协议，RPO 下降；Edge 和 Consumer 业务不及预期；CY27 出货量展望比 8 月更差；3 月指引被定为“保守”；自由现金流因应收账款而不及预期。看起来过于乐观的看涨假设包括：按“现行”价格续约只有在现行价格持续上涨时才会向上重新定价；“管道超过供应”指的是管道而非合同，而且在一个客户据称供不应求的季度里并未产生任何签约；SLC 和 HBF 只是架构层面的讨论，没有收入；在通用汽车的业务表现较为平稳的背景下，其每股收益的增长现在主要来自业务规模的增长以及股票回购行为，这正是经济周期后期企业盈利状况的典型特征。如果 12 月及之后的合同价格不再有显著上涨，或者 2027 年下半年非 NBM 产品线的价格出现下降，又或者通用汽车采用 80%的定价模式，那么其盈利预期将会进一步下调。

TWLO -18%: Organic slowed for the first time this year (15.7% vs. ~17-18% bogeys), and a 10%+ 2027 floor with GP only matching revenue takes acceleration off the table

TWLO 下跌 18%：今年其有机业务增长速度首次出现放缓（增长率为 15.7%，而行业平均水平为 17%-18%），此外，到 2027 年其业务增长率还将保持在 10%左右；由于 GP 的营收增长速度无法与有机业务相媲美，因此该公司的业务增长势头也将受到限制。

Lean was long heading in for bulls who were playing for the agent adoption and Muse data points despite some HF degrossing ahead of the print, so the organic decel/miss didn't cut it.

尽管在数据发布前有一些机构减持，但市场整体仍偏向看多，因为各方都在努力推动该产品的采用以及收集相关数据；因此，业绩的下滑或未达预期并不足以改变市场的乐观情绪。

Bulls pushback is that the 2027 outlook was called a floor (10% vs street at 11.5%) by mgmt and leaves out personal agents, after FY25 and FY26 each finished 5-7pts above their initial guides. Bulls will say voice AI is ~1% penetrated, TWLO is working with every leading consumer-agent player, point to the GM and OM beats (100bps+), and say ~22x CY27 FCF already prices a decel. Bears of course will keep harping on the first organic decel of the year, smallest beat since Q2'24, the end of five straight GP accelerations, ex-fee DBNE slipping ~1pt to ~110%, and 4Q and 2027 GP guided only in line with organic (4Q GP below 3Q's dollars), which removes the GP-over-revenue spread a part of the bull case was built on.

多头反驳称，管理层将 2027 年展望称为底线（10%对比华尔街的 11.5%），且未计入个人代理业务，而 FY25 和 FY26 最终均比初始指引高出 5-7 个百分点。多头会指出，语音 AI 的渗透率仅为~1%，TWLO 正与所有领先的消费者代理玩家合作，并强调毛利率和营业利润率的超预期表现（100 个基点以上），同时表示~22 倍 CY27 自由现金流已经反映了增速放缓的预期。当然，看空派会不断强调今年首次出现的有机增长放缓现象：这一增速是自 2024 年第二季度以来的最低水平，也意味着此前连续五期的有机增长势头已经结束。扣除费用后的 DBNE 增长率从 1003#1pt 下降到 1004#110%。此外，对于 2027 年的预期也是与有机增长速度保持一致（第四季度的营收将以美元计价，且低于第三季度的水平），这样一来，那些基于更高营收增速而建立的乐观预测也就失去了依据。

Not a great print and unclear path over next 3-6 months, but r/r seems to skew up here (see bull vs. bear below).

未来 3 到 6 个月内，市场状况并不明朗，前景也不清晰；不过，r/r 指标似乎显示市场呈上涨趋势（详见下方的看涨与看跌观点）。

Details

Revenue of $1.56B (+19.9% reported, +15.7% organic) and GP of $768M (+17.7%) beat Street but missed the ~$1.58-1.595B and ~$775-785M bogeys; 4Q organic was guided at 11-12% again, FY26 organic went to 15%, and mgmt's first 2027 look calls for at least 10% organic growth.

营收为 15.6 亿美元（报告口径增长 19.9%，有机增长 15.7%），毛利润为 7.68 亿美元（增长 17.7%），均超出华尔街预期，但未达到 15.8 亿至 15.95 亿美元和 7.75 亿至 7.85 亿美元的预期目标；第四季度有机增长指引再次为 11%至 12%，2026 财年有机增长指引上调至 15%，而管理层对 2027 年的首次展望则要求至少 10%的有机增长。

Key Takeaways

- **Callback.** ON the call back mgmt called the 2027 outlook a floor that excludes personal agents, set with the same method that took FY25 from a 7-8% start to 13% and FY26 from 8-9% to 15%, and said 10% is a reasonable floor on current momentum. It stuck with 2-4% as the beat sweet spot with no change in how it guides, and called 4Q the seasonally biggest quarter and the hardest to forecast; the 4Q GP guide reflects the lapped email migration plus extra hosting capacity spun up to guarantee uptime through the holidays. The organic decel wasn't tied to any single use case or ISV, voice's 20%+ came with volume and add-ons contributing evenly, and analysts came away confident that 20%+ voice growth is sustainable. Email is running around the high end of high-single digits while part of SendGrid moves onto the TWLO platform, and mgmt sees it re-accelerating once it's folded into the unified console with Orchestrator and Memory.

电话会议。在电话会议上，管理层将 2027 年展望称为一个下限，该下限不包括个人代理，并采用与将 FY25 从 7-8%的起点提升至 13%、将 FY26 从 8-9%提升至 15%相同的方法设定，并表示基于当前势头，10%是一个合理的下限。公司坚持 2-4%为超预期的最佳区间，指引方式没有变化，并称第四季度是季节性最大的季度，也是最难预测的季度；第四季度 GP 指引反映了同比基数中包含的电子邮件迁移，以及为保证假日期间正常运行时间而额外启动的主机容量。有机增长并非与某一种特定应用场景或独立软件供应商相关；在语音业务方面，20%以上的增长得益于业务量的增加以及各类附加服务的贡献，分析人士认为这种 20%以上的增长速度是可以持续维持的。电子邮件业务的增长速度则处于高位，处于个位数的较高水平；同时，SendGrid 的部分功能已转移到 TWLO 平台上。管理团队预计，一旦这些功能与 Orchestrator 及 Memory 整合到统一的控制台中，电子邮件业务的增长速度将会再次加快。

On AI voice, more POCs are moving into production (regulated enterprises expand one use case at a time), ISV partners give TWLO reach into small businesses it doesn’t sell to directly, and Verify ranks among TWLO’s biggest and fastest-growing software lines, with agent-initiated traffic opening an identity and governance opportunity on top.

在人工智能语音领域，越来越多的不同行业企业开始将其应用于实际业务中（这些受监管的企业会逐步拓展其应用场景）；ISV 合作伙伴则帮助 TWLO 进入那些它无法直接服务的中小企业市场。此外，Verify 也是 TWLO 旗下发展最快、规模最大的软件产品之一，而由客服人员主动发起的交互过程，则为身份识别与管理带来了新的机遇。

- **Beat size.** Organic revenue grew 15.7% (last q 16.7%), ~4pts above Street’s 11.8% but short of the ~17-18% buyside bar, on revenue of $1.560B vs. Street $1.513B and ~$1.58-1.595B bogeys. The beat on the guide midpoint shrank to 3.3% from 5.2% in 2Q, the smallest since 2Q24 (it matched 1Q25), and the organic 2-yr stack slipped to ~28.6% from ~29.6%, its first decline since at least 1Q25. Mgmt framed it as normalization, saying it “didn’t and still don’t expect 5%+ beats” and that beats over the last three years have run 2-4%.

超预期幅度。有机收入增长 15.7%（上季度为 16.7%），~较华尔街预期的 11.8%高出 4 个百分点，但未达到~买方 17-18%的门槛，收入为 15.60 亿美元，对比华尔街预期的 15.13 亿美元和~15.8-16.0 亿美元的预期目标。指引中点的超预期幅度从二季度的 5.2%收窄至 3.3%，为二季度 24 以来最小（与一季度 25 持平），有机两年堆叠增速从~29.6%下滑至~28.6%，至少自一季度 25 以来首次下降。管理层将其定性为正常化，称其"过去没有、现在也仍然不预期 5%以上的超预期"，并表示过去三年的超预期幅度一直在 2-4%。

- **Messaging.** Messaging revenue grew 24% (last q 28%) with carrier fees adding ~7pts (~10pts in 2Q), so ~17% organic vs. 18% in 2Q, and it held at ~59% of revenue. Mgmt put the decel on ISVs lapping 3Q25, when that channel first accelerated above 20%: ISV revenue grew 20%+ vs. 25%+ in 2Q, and the CFO said the slowdown sat in a few ISVs, with nothing specific to call out. WhatsApp and RCS kept growing quickly, while email grew "a little bit lower than our company average." What's different from August: the CFO had warned that tougher 2H comps would show up in voice and software add-ons, but the decel came in messaging, which makes the biggest and lowest-margin product the swing factor for 4Q.

消息业务。消息业务收入增长 24%（上季度为 28%），其中运营商费用贡献约 7 个百分点（第二季度约为 10 个百分点），因此有机增长约为 17%，而第二季度为 18%，且该业务占收入的比例稳定在约 59%。管理层将增速放缓归因于独立软件供应商（ISV）渠道在 2025 年第三季度面临的高基数——当时该渠道首次加速至 20%以上：ISV 收入增长 20%以上，而第二季度为 25%以上，首席财务官表示放缓集中在少数几家 ISV，没有特别需要指出的具体因素。WhatsApp 和 RCS 持续快速增长，而电子邮件增长"略低于公司平均水平"。与 8 月不同的是：首席财务官此前曾警告，下半年更严峻的同比基数将体现在语音和软件附加产品上，但实际放缓出现在消息业务，这使得规模最大、利润率最低的产品成为第四季度的关键变量。

- **Voice.** Voice held 20%+ growth against a comp ~5pts tougher, with growth split about evenly between minutes and software add-ons; Branded Calling and Conversation Intelligence are still growing triple digits, and total software add-ons grew "well over 25%." Self-serve (~15% of revenue) grew 30%+, and voice inside self-serve grew ~55%, which mgmt treats as the leading indicator because AI natives start there and 60%+ of enterprise customers began in self-serve. Voice AI is still ~1% of voice interactions: adoption so far is in retail, e-commerce and

food service, while the financial services, healthcare and insurance customers that drive the biggest volumes are still experimenting.

语音业务。语音业务在同比基数难度高出~5 个百分点的情况下仍保持 20%以上的增长，增长大致平均分布在分钟数和软件附加功能之间；品牌来电和对话智能仍保持三位数增长，软件附加功能总计增长“远超 25%”。自助服务（约占收入的 15%）增长 30%以上，自助服务内的语音业务增长~55%，管理层将其视为领先指标，因为 AI 原生客户从那里起步，且 60%以上的企业客户始于自助服务。语音 AI 目前仍仅占语音交互的~1%：迄今为止的采用集中在零售、电商和餐饮服务，而推动最大业务量的金融服务、医疗健康和保险客户仍在试验阶段。

Wins included the first eight-figure Conversations deal (a health insurer on Conversation Relay plus real-time transcription) and, per the deck, an eight-figure Flex consolidation at a fintech/payments company, but the AI-native proof point (a $6M+ run-rate customer growing 65%) was the same customer, with the same figures, that mgmt showed in August.

取得的成果包括首笔金额达八位数的业务合同——那是一家健康保险公司委托其提供对话转录服务及实时文字转录功能；此外，还有另一笔金额同样为八位数的业务合同，客户是一家金融技术/支付公司。而最能体现人工智能优势的案例则是同一家客户，其业务规模增长了 65%，相关收入也达到了 600 万美元以上。这些数据与管理层在 8 月份所展示的数字完全一致。

更多一手研报请加微信：FCCNN88

- **Consumer agents.** This was the new debate after the personal-agent launches (META’s Muse among them), and mgmt was bullish but careful. The CEO said TWLO works with “all the leading companies” plus a long tail, across outbound voice, messaging and verification/OTP, but that the opportunity is “very much on the come” and consumer AI is “a fraction” of voice AI’s ~1% penetration. The COO said the faster pull is on the other side: businesses standing up virtual agents to field inbound consumer-agent traffic. TWLO put an identity product into private beta to verify whom an agent represents, with GA next year, usage-based pricing and “software margin-like” GM, and mgmt called agent-to-agent protocols “all tailwind.” No revenue was attributed to any of it.

消费者代理。这是个人代理发布（其中包括 META 的 Muse）之后的新一轮辩论，管理层对此持乐观但谨慎的态度。CEO 表示，TWLO 与“所有领先公司”以及大量长尾客户合作，涵盖外呼语音、消息传递和验证/OTP，但这一机遇“很大程度上尚未到来”，消费者 AI 在语音 AI 约 1%的渗透率中只占“一小部分”。COO 表示，更快的拉动来自另一端：企业正在部署虚拟代理来应对入站的消费者代理流量。TWLO 将一款身份产品投入了私测，用于验证代理代表谁，预计明年正式发布，采用基于用量的定价和“类似软件利润率”的毛利率，管理层称代理对代理协议“全是顺风”。其中没有任何一项被归入营收。

- **Gross profit.** Non-GAAP GP of $767.8M grew 17.7% vs. Street $730.6M (+12%) but missed the ~$775-785M bogeys, ending a run of five straight quarters of accelerating GP growth (2Q +18.1%). GM of 49.2% beat Street's 48.3%; ex-fees it rose 80bps y/y and 30bps q/q per mgmt, and GP outgrew organic revenue by ~2pts (1.4pts in 2Q). The new part is the guide: 4Q GP growth similar to organic (11-12%, or ~$757-764M, below 3Q's $768M) because holiday hosting costs return and the email on-prem-to-cloud migration tailwind is now "fully in our run." With 2027 GP also guided in line with organic, the GP-over-revenue spread that EV/GP bulls have underwritten isn't in the outlook, even though the 4Q GP guide is above Street's ~10.5%.

毛利润。非 GAAP 毛利润为 7.678 亿美元，同比增长 17.7%，高于华尔街预期的 7.306 亿美元（+12%），但未达到 7.75 亿至 7.85 亿美元的预期目标，结束了连续五个季度毛利润增长加速的势头（第二季度为+18.1%）。毛利率为 49.2%，超过华尔街预期的 48.3%；据管理层称，剔除费用后，毛利率同比上升 80 个基点，环比上升 30 个基点，且毛利润增速超过有机收入增速约 2 个百分点（第二季度为 1.4 个百分点）。新增部分是业绩指引：第四季度 GP 增长与有机增长相似（11-12%，即~$757-764M，低于第三季度的$768M），因为假日托管成本回归，且电子邮件从本地到云端迁移的顺风现已“完全体现在我们的运行中”。由于 2027 年 GP 指引也与有机增长一致，EV/GP 看涨者所预期的 GP 对收入的利差并未出现在展望中，尽管第四季度 GP 指引高于华尔街的~10.5%。

- **Margins.** Non-GAAP OI of $325.7M (20.9% OM, +290bps y/y) beat Street's $291M (19.3%) and the $285-295M guide and hit the top of the ~$315-325M bogeys, up 39% y/y as opex growth slowed to ~6% from ~12% in 2Q. About $11M (~70bps) came from platform credits mgmt hadn't planned on, so the underlying beat over the guide top was ~$20M. EPS of $1.65 beat Street's $1.47 and the ~$1.60 bogey, FCF was a record $370M (+49%, 23.7% margin) vs. Street ~$324M, and SBC fell to 9.9% of revenue (-230bps y/y). The 4Q OI guide of

$300-310M (19.1% OM at the mid) sits ~$21M below 3Q: the credits don't repeat, mgmt added R&D and go-to-market headcount during 3Q, and holiday hosting weighs on GP.

利润率。非 GAAP 营业利润为 3.257 亿美元（营业利润率 20.9%，同比提升 290 个基点），超出华尔街预期的 2.91 亿美元（19.3%）以及 2.85-2.95 亿美元的指引区间，并触及 3.15-3.25 亿美元预测区间的高端，同比增长 39%，因运营费用增速从二季度的 12%放缓至 6%。其中约 1100 万美元（约 70 个基点）来自管理层此前未计划的平台返利，因此相对于指引上限的底层超预期幅度约为 2000 万美元。每股收益 1.65 美元，超出华尔街预期的 1.47 美元以及 1.60 美元的标杆，自由现金流创纪录达 3.7 亿美元（同比增长 49%，利润率 23.7%），而华尔街预期为 3.24 亿美元，股权激励费用降至收入的 9.9%（同比下降 230 个基点）。第四季度营业利润指引为 3 亿至 3.1 亿美元（中值对应营业利润率 19.1%），较第三季度低约 2100 万美元：一次性收益不再重复，管理层在第三季度增加了研发和市场推广人员，且假日托管对毛利率构成压力。

- **Guide.** The 4Q organic guide of 11-12% repeats the 3Q range and beats Street's ~10.3% (~11% on broader sets), but the 11.5% mid sits just under the ~12% buyside bar. Reported revenue of $1.595-1.605B (+17-17.5%) vs. Street $1.581B assumes ~$75M of carrier fees ($53M in 3Q). Mgmt called it its "strongest quarterly revenue guidance in several years" but stressed that Q4 is more volatile and that 2-4% beats are the norm; by our math that range puts 4Q organic at ~14-16%, anywhere from a ~2pt decel to flat vs. 3Q's 15.7%. FY26 organic goes to 15% from 13-13.5% (Street 13.4%, ~15.5% bogey), and FY OI and FCF go to $1.19-1.20B from $1.135-1.155B, a $50M raise at the mid that matches the bogeys (Street $1.151B / $1.143B).

预测：第四季度的有机增长率为 11-12%，与第三季度的水平相当，高于市场预期的 10.01%-10.3%（若考虑更广泛的指标，则约为 11%）。不过 11.5%这一数值略低于市场预期的 12%。报告中的营收为 15.95 亿至 16.05 亿美元，同比增长 17-17.5%；而市场预期为 15.81 亿美元，其中运营商费用为 7500 万美元（第三季度为 5300 万美元）。管理层称这是"多年来最强的季度营收指引"，但强调第四季度波动更大，2-4%的超预期是常态；按我们的计算，这一区间意味着第四季度有机增长为~14-16%，较第三季度的 15.7%从放缓~2 个百分点到持平不等。FY26 有机增长从 13-13.5%升至 15%（市场预期 13.4%，~15.5%的目标），全年 OI 和 FCF 从 $1.135-1.155B 升至$1.19-1.20B，中期估值上调 5000 万美元，与市场预期一致（华尔街预期分别为 11.51 亿美元和 11.43 亿美元）。

- **2027.** Mgmt gave a first look at 2027 a quarter early: organic growth of at least

10% (vs. the 7-8% 2025 Investor Day framework), GP growth similar to organic, and OI and FCF of at least $1.35B each (the OI floor was at least $1.23B in February). That's roughly in line to slightly below Street on organic (~11-11.5%, with some sets as low as ~8.6%) and in line on OI (~$1.34-1.35B), and above it on FCF (~$1.30B). On callbacks mgmt called it a floor that leaves out personal agents, noting FY25 started at 7-8% and finished at 13% and FY26 started at 8-9% and is now 15%. The buyside wanted a path to staying in the mid-to-high teens, and a 10%+ starting point with no GP leverage reads as a decel year unless the usual 5-7pt guide-to-actual gap repeats; more detail comes on the 4Q call and at an Investor Day alongside SIGNAL on April 13-14, 2027.

2027 年。管理层提前一个季度首次展望 2027 年：有机增长至少 10%（相比 2025 年投资者日框架的 7-8%），GP 增长与有机增长相似，OI 和 FCF 均至少为 13.5 亿美元（2 月份时 OI 下限为至少 12.3 亿美元）。这在有机增长方面大致符合预期至略低于华尔街预期（约 11-11.5%，部分预测低至 ~8.6%），OI 方面符合预期（约 13.4-13.5 亿美元），FCF 方面则高于预期（约 13.0 亿美元）。在回调管理方面，有人称其为一种将个人代理排除在外的下限，并指出 2025 财年从 7-8%起步、最终达到 13%，而 2026 财年从 8-9%起步、目前为 15%。买方希望有一条保持在十几%中高段的路径，而在没有 GP 杠杆的情况下，10%以上的起点看起来像是减速的一年，除非通常 5-7 个百分点的指引与实际之间的差距再次出现；更多细节将在第四季度电话会议上以及 2027 年 4 月 13-14 日与 SIGNAL 同期举行的投资者日上公布。

Bull vs. Bear Debate

牛市与熊市之争

Bull Case

Bulls see TWLO as the neutral communications layer for the AI era. Every AI application that has to reach a consumer on a phone still needs numbers, carrier connectivity, deliverability, compliance and authentication, and mgmt says virtually every app-layer voice AI player runs on TWLO's rails, so it wins whichever model or agent platform wins. Voice AI is ~1% of voice interactions, self-serve voice (where AI natives start) is growing ~55%, and those customers land on voice and then add messaging, WhatsApp and software add-ons (Branded Calling, Conversation Intelligence, Relay, Verify) that carry software-like margins. Consumer agents and the identity layer (GA in 2027, usage-priced, software-like GM) add a second leg that isn't

in any numbers yet.

多头将 TWLO 视为 AI 时代的中立通信层。每一个需要在手机上触达消费者的 AI 应用，仍然需要号码、运营商连接、可送达性、合规和身份验证，而管理层表示，几乎所有应用层的语音 AI 玩家都运行在 TWLO 的轨道上，因此无论哪种模型或代理平台胜出，它都会赢。语音 AI 占语音交互的~1%，自助式语音（AI 原生企业起步的地方）增长~55%，这些客户先落地语音，然后叠加消息、WhatsApp 和软件附加组件（Branded Calling、Conversation Intelligence、Relay、Verify），这些附加组件带来类似软件的利润率。消费者代理和身份层（2027 年全面上市，按使用量定价，类似软件的毛利率）增加了第二条增长曲线，而这条曲线尚未体现在任何数字中。

Around that sits a much better P&L: FY26 organic growth of 15% vs. the 7-8% Investor Day framework, OI of $1.19-1.20B vs. a $1.04-1.06B initial FY26 guide, FCF converting ~1:1 with OI, SBC under 10% of revenue and steady buybacks, from a mgmt team that has guided low two years running.

其盈利表现则要好得多：2026 财年的自然增长率为 15%，而此前在投资者日上给出的预期仅为 7-8%；运营资金为 11.9 亿至 12 亿美元，高于最初预计的 10.4 亿至 10.6 亿美元；自由现金流与运营资金的比例为 1:1；销售、分销及营销费用占营收的比例低于 10%；同时公司还持续进行股票回购。此外，管理团队连两年都给出了较低的业绩预期。

This quarter backs up the parts of that case that matter long term. Voice held 20%+ on a ~5pt tougher comp, self-serve held 30%+, software add-ons held 25%+, the first eight-figure Conversations deal landed, and GP still outgrew organic revenue by ~2pts with ex-fee GM up 80bps y/y. Profit was the cleanest part (OI +39%, record $370M of FCF), and the 2027 OI and FCF floors are already at or above Street. Bulls will say the messaging decel is a comp concentrated in a few ISVs and that the guide is set the same way as before: 3Q's 11-12% guide became 15.7%, and a normal 2-4% beat puts 4Q at ~14-16%. If 2027 repeats FY25 and FY26 (a 5-7pt gap between the initial guide and the actual), organic lands in the mid-teens, Street's ~11% moves up, and FCF heads toward ~$1.5B.

这个季度印证了该逻辑中长期关键的部分。Voice 在比较基数更难的~5pt 情况下仍保持 20%以上增长，自助服务保持 30%以上增长，软件附加产品保持 25%以上增长，首个八位数的 Conversations 交易落地，且 GP 增速仍比有机收入高出~2pts，剔除费用后的 GM 同比提升 80 个基点。利润是最干净的部分（OI 增长 39%，FCF 创纪录达 3.7 亿美元），而 2027 年的 OI 和 FCF 下限已经达到或高于市场预期。多头会说，消息传递减速是集中在少数 ISV 中的比较基数效应，而且指引的设定方式与以往相同：三季度的 11-12%指引变成了 15.7%，而正常的 2-4%超预期使四季度达到~14-16%。如果 2027 年重演 FY25 和 FY26（初始指引与实际值之间存在 5-7 个百分点的差距），有机增长将落在 15%左右，华尔街的~11%将上移，自由现金流将迈向~15 亿美元。

The multiple can re-rate on proof of consumer-agent volume, identity pricing at the April Investor Day, regulated-industry voice POCs reaching production, and a starting point of ~22x CY27 FCF vs. ~32x for infrastructure software peers.

在以下条件满足后，该估值可以重新调整：消费者与代理商的数量有所增加、在 4 月的投资者日上能明确定价、相关行业的产品能够投入生产，同时，27 财年的自由现金流预计为~22x，而同类基础设施软件公司的自由现金流则为~32x。

Bulls believe TWLO can grow organic revenue ~14% in CY27 (vs. the 10%+ floor) with GP growing about as fast, producing ~$1.48B of FCF, and deserves ~30x EV/FCF, implying ~$285 per share.

分析师们认为，TWLO 在 2027 年的自然增长营收增速可达 1001#14%，而营业利润的增长率也会处于类似水平；这样一来，该公司就能产生 1002#$14.8 亿美元的自由现金流。基于此，其 EV/FCF 比率应为 1003#30 倍，对应的每股价值则为 1004#$285 美元。

Bear Case

Bears see a ~60%-messaging, usage-based business with ~49% GM whose 2026 acceleration leaned on easy comps, ISV volume and a voice AI wave that is still ~1% of minutes, and they doubt TWLO keeps the value as voice moves up the stack. Frontier labs and voice AI platforms (OpenAI’s Presence, ElevenLabs and others) own the customer relationship and the intelligence layer, TWLO supplies connectivity and compliance plumbing they can multi-source as they scale, and CPaaS price competition hasn’t gone away. Part of this year’s acceleration also came from earlier

pricing changes that are now being lapped, and carrier fees (~$245M of pass-through this year) raise costs for the small-business messaging base and push some senders toward other formats. Email is growing below the company average against newer developer-first rivals like Resend, and AI-native revenue is concentrated in a handful of fast-growing but volatile customers.

空头看到的是一个~60%消息传递、基于用量的业务，毛利率为~49%，其 2026 年的加速依赖于轻松的同比基数、ISV 业务量以及仍仅占通话分钟数~1%的语音 AI 浪潮，他们怀疑随着语音向技术栈上层迁移，TWLO 能否保住自身价值。前沿实验室和语音 AI 平台（OpenAI 的 Presence、ElevenLabs 等）掌握着客户关系和智能层，TWLO 提供的连接与合规管道在它们规模化后可以多源采购，而 CPaaS 的价格竞争也并未消失。今年增长速度的加快，部分原因在于此前进行的定价调整现已产生效果；此外，运营商费用（今年约为 2.45 亿美元）也增加了小型企业的通讯成本，迫使一些发件人转而使用其他通讯方式。与 Resend 等更注重开发者体验的竞争对手相比，电子邮件的使用率增长速度低于行业平均水平；而与人工智能相关的收入则集中在少数几个发展迅速但稳定性较差的客户手中。

The mix shift to software hasn't moved GM much either: mgmt itself says messaging's weight sets the margin rate. In this view, 2026 is the peak growth year, and TWLO drifts back toward the low-double-digit grower the Investor Day framework described.

业务向软件领域的转型也并未为通用汽车带来太大变化：该公司管理层认为，消息传递功能的重要性决定了企业的利润率。按照这种观点，2026 年将是增长最快的年份，而 TWLO 的增长率则会回落至投资者日报告中所预测的较低的双位数水平。

This quarter gave bears their first data point fuel in several quarters. Organic decelerated for the first time this year, GP growth ended a five-quarter acceleration streak, ISV growth fell to 20%+ from 25%+, ex-fee DBNE slipped ~1pt to ~110%, and the beat shrank to 3.3% with mgmt calling 2-4% normal. The bull assumption most at risk is GP leverage: mgmt guided 4Q GP growth to ~11-12% (below 3Q's dollars) and 2027 GP only in line with organic, because the email migration tailwind is used up and holiday hosting costs return. OI was flattered by ~$11M of one-time credits, and 4Q OI steps down ~$21M. If 2027 lands at ~10-12% organic (the floor plus a small beat) with GP in line, TWLO is a low-teens grower, and with consumer agents explicitly "going to take some time," there's no near-term catalyst to re-rate it while a crowded long unwinds.

本季度为看空者提供了几个季度以来的第一个数据支撑点。有机增长今年首次减速，GP 增长结束了连续五个季度的加速势头，ISV 增长从 25%以上降至 20%以上，剔除费用的 DBNE 下滑约 1 个百分点至约 10%，超预期幅度收窄至 3.3%，管理层称 2-4%为正常水平。最受威胁的看多假设是 GP 杠杆：管理层指引第四季度 GP 增长为 1-12%（低于第三季度的绝对额），且 2027 年 GP 仅与有机增长持平，因为邮件迁移的顺风已经用尽，假日托管成本回归。我因获得了~$11M 的一次性补贴而感到荣幸；不过第四季度的收益则下降了~$21M。如果 2027 年的自然增长率为~10-12%（即最低预期值略高一点），同时毛利率也能保持稳定，那么 TWLO 的增长率应该会在低两位数左右。鉴于消费者市场的复苏还需要一段时间，短期内也不太可能有什么因素能改变其对这家公司的估值，而在当前市场环境不佳的情况下，更无需考虑上调其估值了。

Estimates won’t fall much, but the multiple can compress toward the ~20x forward FCF the stock carried at the start of 2026, before the voice AI re-rating.

估值不会大幅下降，但该股票的估值倍数可能会向 2026 年初的数值靠拢——即在语音人工智能技术带来估值上调之前，该股票所对应的未来自由现金流对应的估值倍数约为 1001#20 倍。

Bears believe TWLO grows organic revenue ~10% in CY27 (the floor), with GP up ~9% to ~$3.23B and FCF at the ~$1.35B floor, and deserves ~20x EV/FCF, implying ~$175

熊市分析师认为，TWLO 在 2027 年的有机营收增长率至少为 10%，营业利润增长率则为 9%，达到 32.3 亿美元；自由现金流则至少为 13.5 亿美元。因此，该公司的 EV/FCF 比率应为 20 倍，对应的股价则为 175 美元。
