Nvidia and the World Without Jensen

英伟达与没有黄仁勋的世界

Is NVIDIA Over? Export Controls, RASA, Open Source Implications, Supply Chain Implications, Affair, US Still Dependent On China

英伟达完了吗？出口管制、RASA、开源影响、供应链影响、丑闻、美国仍依赖中国

Jensen Huang is no longer the CEO of Nvidia. Nvidia's board was investigating Jensen's conduct and weighing his future at the company he founded, and clearly the conduct issue is real; it is ethically problematic to have relationships with a customer who is a Chinese CCP asset and with multiple subordinates.

黄仁勋不再是英伟达的首席执行官。英伟达董事会一直在调查黄仁勋的行为，并权衡他在自己创立的公司的去留问题；显然，行为问题是真实存在的——与客户中的中共资产人士以及多名下属发生关系，在伦理上是有问题的。

Additionally, we believe there is more at play with his resignatiom after only four days. We believe it is directly tied to the vast smuggling of GPUs. Our Accelerator Model tracks every AI chip's production and destination, and our data shows more than 1.5GW of Nvidia chips, which are restricted, still ultimately ended up in China. This figure doesn't even include chips that Nvidia created to circumvent US rules, a story we originally broke.

此外，我们认为，他仅在四天后辞职，背后还有更深层的原因。我们认为这直接与大规模的 GPU 走私有关。我们的加速器模型追踪每一片 AI 芯片的生产与流向，我们的数据显示，超过 1.5GW受管制的英伟达芯片最终仍流入中国。这一数字甚至还不包括英伟达为规避美国规则而专门设计的芯片——这是我们最早披露的报道。

We believe the US intelligence community is a large part of the push to get Jensen out of Nvidia. Specifically, we believe it is likely that RASA or similar legislation, which has already passed the house, will move forward. AI and chip restrictions on China are going to ramp now much faster with the biggest defender Jensen, gone. We are

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

strong believers in some restrictions, but poorly shaped ones are damaging to US interests.

我们认为，美国情报界是推动黄仁勋离开英伟达的重要力量。具体而言，我们认为 RASA 或类似的立法很可能继续推进——该法案已在众议院通过。随着最大支持者黄仁勋的离开，针对中国的 AI 和芯片限制现在将大幅加速。我们坚定支持某些限制措施，但设计糟糕的限制会损害美国利益。

This sort of legislation will have consequences, and we don't think politicians are thinking them through.

这类立法将带来后果，而我们认为政客们并没有把这些后果想清楚。

Here are the clear benefits of the current regime where Chinese labs are able to access GPUs remotely:

当前中国实验室能够远程使用 GPU 的体制，其明确好处如下：

- Profits flow to American companies.
- 利润流向美国公司。
- The US can monitor what Chinese labs are doing.
- 美国可以监控中国实验室在做什么。
- The US can cut off their access to the GPUs through politics or by force almost instantly, if they choose.
- 如果美国愿意，几乎可以在瞬间通过政治手段或强制方式切断他们使用 GPU 的权限。
- American companies such as NVIDIA, AMD, Broadcom, Google, Amazon, Microsoft, Meta, Supermicro, and Dell all depend on Chinese companies in their supply chain.
- 英伟达、AMD、博通、谷歌、亚马逊、微软、Meta、超微和戴尔等美国公司，都在供应链上依赖中国公司。
- American companies such as NVIDIA and AMD employ Chinese engineers (who live in China, to be clear) to develop hardware and low-level software for

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

their GPU systems. Without these engineers, we are certain that the user experience for these GPUs would be materially worse than it is today.

- 英伟达和 AMD 等美国公司雇用了中国工程师（明确说，是居住在中国的工程师）来开发其 GPU 系统的硬件和底层软件。没有这些工程师，我们可以肯定，这些 GPU 的用户体验会比今天差得多。
- American companies, especially the entire startup ecosystem benefit from the open source research that Chinese companies, students and independent researchers publish using these GPUs today.
- 美国公司，尤其是整个创业生态，都受益于中国公司、学生和独立研究者使用这些 GPU 发布的开源研究。
- China is (even slightly) less motivated to use their domestic accelerators.
- 中国（哪怕只是略微）降低了使用国产加速器的动力。
- Innovations from China flow globally through open innovations of wide expert parallelism, OSS kernel libraries: MSA, DeepEP, DeepGEMM, etc.
- 来自中国的创新通过广义专家并行、开源算子库等开放创新流向全球：MSA、DeepEP、DeepGEMM 等。

With that said we do believe in some AI restrictions to China, but those are more shaped like the MATCH Act then RASA.

话虽如此，我们确实认为应当对中国实施某些 AI 限制，但那些限制更像《MATCH 法案》，而不是 RASA。

Maybe biggest of all: **open source is under attack**. It's an open secret that Nvidia works directly with the Chinese labs on open source and helping them optimize GPUs and models. These labs utilize Blackwell GPUs, which Nvidia knows. The US open source ecosystem and many startups rely on Chinese AI models. This is significantly impaired with Jensen gone and the China hawks winning.

也许最重要的是：**开源正受到攻击**。英伟达直接与中国实验室合作开展开源工作、帮助他们优化 GPU 和模型，这已是公开的秘密。这些实验室在使用 Blackwell GPU，英伟达对此知情。美国开源生态和许多创业公司都依赖中国 AI 模型。随着黄仁勋离开、对华鹰派占上风，这一局面将受到严重削弱。

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

But the question that matters for shareholders (and the AI supply chain) is a different one: what is Nvidia without Jensen?

但对股东（以及 AI 供应链）而言，真正重要的问题却是另一个：没有黄仁勋，英伟达会变成什么样？

Our view is that the company was never built for him not to be there. He was at the helm for 33 years, and even though the board pressured him out (or he “resigned”) Nvidia would still be materially better off with him there instead of gone. The company was uniquely built to suit the man himself. The company without the man might be an entirely different beast. SpaceX and Tesla don't function without Elon, Nvidia doesn't function without Jensen.

我们的观点是，这家公司从来不是按“没有他也能运转”来设计的。他掌舵了 33 年，尽管董事会逼他离开（或者说他“辞职”了），但英伟达若是有他在，还是会明显好过没有他。这家公司是独特地围绕这个人本人打造的。没有这个人的公司，可能会是完全不同的另一种存在。SpaceX 和特斯拉离了埃隆·马斯克就无法运转，英伟达离了黄仁勋也无法运转。

One King, 60 Direct Reports

一位“国王”，60 名直属下属

Nvidia’s corporate structure is odd for a company of its size and scale. Jensen has roughly 60 direct reports, according to his public statements. He has said that CEOs should have the most direct reports because those people require the least amount of management and that he doesn’t have one-on-one meetings with them.

以英伟达的体量与规模来看，它的公司治理结构相当不寻常。根据黄仁勋的公开说法，他大约有 60 名直属下属。他曾表示，首席执行官应该拥有最多的直属下属，因为这些人最需要的是尽可能少的管理，而且他并不与他们进行一对一会议。

But few of them can do things without Jensen. The company is run like a kingdom with one king, with everyone else, regardless of seniority, a peon doing his bidding. Jensen has said that it doesn’t matter who reports to who as their title isn’t related to

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

how important their job is, and it's one of the reasons why Nvidia is the "smallest large company in the word" and has so much fewer employees – about 42,000 – despite its big market cap. At Nvidia, there is less politics as a result. Jensen has said this flat network empowers employees and allows the company to adapt more quickly because its technology is also moving so quickly.

但他们中很少有人能在没有黄仁勋的情况下推进事情。公司的运转方式就像一个只有一位国王的王国，其他所有人无论资历如何，都只是执行他意志的下属。黄仁勋曾说过，谁向谁汇报并不重要，因为头衔高低与实际工作的重要性并不相关；这也是英伟达成为"世界上规模最小的大公司"的原因之一——尽管市值庞大，员工人数却只有约 4.2 万人。其结果是，英伟达内部的办公室政治更少。黄仁勋表示，这种扁平化的网络能够赋能员工，并让公司能够更快适应变化，因为其技术演进同样非常迅速。

This is one of the reasons Nvidia moves fast. Once Jensen set a direction, everyone moved on it together. Former employees have told us that product development and engineering often happen until the last minute so the company can change its mind if it needs to. For example, the GB200 design came together a lot closer to the product cycle than probably anyone would have liked, one former executive told us. Jensen has said he wishes he could keep the company in startup mode forever.

这正是英伟达能够快速行动的原因之一。一旦黄仁勋定下方向，所有人就会一起朝这个方向推进。前员工告诉我们，产品开发和工程工作往往会持续到最后一刻，以便公司在必要时还能改变主意。例如，一位前高管告诉我们，GB200 的设计定稿时间，比几乎所有人希望看到的都要更接近产品周期。黄仁勋曾表示，他希望能把公司永远保持在创业公司的状态。

The cost of that structure, however, is that Nvidia doesn't have a deep bench of successors. Look at Nvidia's website: only five others, two of whom are legal and finance executives, are featured prominently among his reports. Most of his direct reports aren't trained for the spotlight and are actively discouraged from seeking it. Few leave to become CEOs of other major companies, with Rene Haas at Arm the rare exception. Few at Nvidia get the chance to shine externally because Jensen makes all the big decisions. But much of Nvidia's executive team doesn't mind because heavy is the head that wears the crown, and many are happy to stay until

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

retirement age because they're well paid, treated well, and believe in the mission and their leader.

然而，这种结构的代价是，英伟达并没有深厚的继任者梯队。看看英伟达的网站：在他的直接下属中，只有另外五人被突出展示，其中两人还是法务与财务高管。他的大多数直接下属都没有接受过应对公众关注的训练，而且公司也明确不鼓励他们寻求曝光。很少有人离开英伟达去担任其他大公司的 CEO，Arm 的 Rene Haas 是罕见的例外。英伟达内部很少有人有机会在外部崭露头角，因为所有重大决策都由 Jensen 拍板。但英伟达的高管团队中有很多人并不介意这一点，因为欲戴王冠，必承其重；许多人乐于一直干到退休年龄，因为他们薪酬优厚、受到善待，并且认同公司的使命和他们的领导者。

No One Wants the Job

没人想要这份工作

Colette Kress has been named interim CEO, but Nvidia is looking for a permanent CEO. That cannot be someone with finance background. The obvious internal names being floated to succeed Jensen on the technical side are Ian Buck and Jonah Alben. Buck, who created CUDA out of his doctoral research at Stanford, joined Nvidia in 2004 and now runs the datacenter business as vice president of hyperscale and high-performance computing. He is often placed in charge of things while Jensen travels and frequently speaks at conferences.

Colette Kress 已被任命为临时 CEO，但英伟达正在寻找一位正式 CEO。这个人选不能具有财务背景。目前被讨论接替 Jensen、负责技术方向的明显内部人选是 Ian Buck 和 Jonah Alben。Buck 在斯坦福大学攻读博士期间创立了 CUDA，2004 年加入英伟达，目前以超大规模计算与高性能计算副总裁的身份负责数据中心业务。Jensen 出差时，他经常受命代管相关事务，并且频繁在会议上发表演讲。

Alben, who has been at Nvidia since 1997, is senior vice president of GPU engineering and oversees the design of the company's GPUs. But realistically, no one person can run it all. We don't think Buck is capable of running the technical hardware engineering side of the house. Alben and others on his team have technical

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

autonomy, but even he doesn't control the entire chip side, where other senior leaders who handle many major technical and business divisions also report directly to Jensen. Both are amazing but likely not able to exert the supply chain mastery Jensen has.

Alben 自 1997 年以来一直在英伟达任职，现任 GPU 工程高级副总裁，负责监督公司 GPU 的设计。但现实地说，没有一个人能够独自管理这一切。我们认为 Buck 没有能力统管硬件工程方面的技术工作。Alben 及其团队中的其他成员拥有技术自主权，但即便是他也不掌控整个芯片业务；负责多个主要技术和业务部门的其他高管同样直接向 Jensen 汇报。两人都很出色，但很可能都无法施展 Jensen 所具备的那种供应链管理掌控力。

There is also the question of whether anyone wants to do the job of CEO. An executive told us earlier this year that "Ian would rather die than succeed Jensen and wouldn't want that job. Jonah is more respected and people say he could, but again, no one would really want that job." Circumstances, though, have obviously changed. Kress is the interim CEO, but wrangling more than 60 VPs to a cohesive vision of the company takes a certain kind of person, and otherwise the firm's direction risks dissolving into noise.

此外，还有一个问题：是否有人愿意承担 CEO 这份工作。今年早些时候，一位高管告诉我们："Ian 宁愿死也不愿接替 Jensen，他不会想要那份工作。Jonah 更受敬重，人们说他可以，但话说回来，没人会真正想要那份工作。"然而，情况显然已经改变。Kress 现在是 interim CEO（临时首席执行官），但要让 60 多位副总裁围绕一个统一的公司愿景协同一致，需要某种特定类型的人物，否则公司的发展方向就有陷入噪音的风险。

Founder Bets Do Not Survive Professional Managers

创始人式押注无法由职业经理人延续

Jensen is one of the last old-school tech founders, of the same generation as Elon Musk and a bit older than Mark Zuckerberg. The other companies that came up

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

alongside Nvidia have all transitioned to professional managers, including AMD, Google, Microsoft, Apple and Amazon.

Jensen 是最后一批老派科技创始人之一，与 Elon Musk 属于同一代人，比 Mark Zuckerberg 稍长几岁。与 Nvidia 同期成长起来的其他公司，如今都已过渡到职业经理人管理，包括 AMD、Google、Microsoft、Apple 和 Amazon。

Nvidia's success relies on big bets that can take years, if not a decade, to pay off. A founder with the full support of the board can take those risks without worrying about a revolt. CUDA lost money for years while Wall Street analysts kept questioning it, but Jensen held steady and the bet paid off enormously. As one former employee put it: "Jensen put the whole company behind programmable shaders, CUDA and tensor cores despite a lot of opposition to spending transistors on them when use was limited."

Nvidia 的成功依赖于重大押注，这些押注可能需要数年乃至十年才能见效。一位获得董事会全力支持的创始人可以承担这些风险，而不必担心内部哗变。CUDA 在多年里持续亏损，华尔街分析师不断质疑，但 Jensen 坚持了下来，最终这笔押注获得了巨大回报。正如一位前员工所说："尽管当时反对把晶体管花在用途有限的可编程着色器、CUDA 和 Tensor Core 上的声音很多，Jensen 仍把整个公司押在了这些方向上。"

Omniverse and autonomous driving are the new bets within Nvidia. Internally, Jensen calls them "zero billion dollar bets," former employees tell us. They make no money today, but he sees them as just as big as CUDA. He also built the Shield TV consumer entertainment box and the DGX Cloud service on the idea that Nvidia needs to understand its customers to design better products, even if those two businesses made little or no money and were ultimately cast aside.

Omniverse 和自动驾驶是 Nvidia 内部正在推进的新押注。前员工告诉我们，Jensen 在内部称它们为"zero billion dollar bets"（零十亿美元押注）。它们今天还没有产生收入，但他认为它们的潜力不亚于 CUDA。他还基于这样一种理念推出了 Shield TV 消费娱乐盒子和 DGX Cloud 服务：Nvidia 需要理解客户，才能设计出更好的产品——即使这两项业务最终几乎没有盈利，甚至最终被放弃。

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

An Nvidia successor who isn't the founder, no matter how long they have been at the company, answers to the board and shareholders in a different way. Long-term bets and convictions of this kind become much less likely, and one of the biggest issues is Jensen's legendary kingmaking and dealmaking, which is going to be hard to replicate.

无论一位非创始人出身的英伟达接班人在公司任职多久，其向董事会和股东负责的方式都会有所不同。这类长期押注和坚定信念会变得罕见得多，而最大的问题之一是黄仁勋传奇般的"点石成金"能力与交易手腕，这将很难被复制。

Customers Bought Jensen, Not Just GPUs

客户购买的是黄仁勋，而不仅仅是 GPU

Jensen was the chief decider on chip allocation to the hyperscalers and everyone else. Customers are always jockeying for allocation and fighting for Nvidia's attention, and more and more of Nvidia's deals require extensive Nvidia support. As we wrote in July, Nvidia has a choice over whether to allocate more capacity to hyperscalers, neoclouds or neoclouds on its backstop program, where it credit-supports the cluster and takes a share of the cloud revenue. This central bank of Nvidia was backed by the full faith and credit of Jensen. The next CEO is unlikely to be able to make the bold bets Jensen did.

黄仁勋是向超大规模云厂商及其他所有客户分配芯片额度的最高决策者。客户们始终在争夺额度、争取英伟达的关注，而英伟达越来越多的交易需要其提供大量支持。正如我们在7月的文章中所写，英伟达可以选择将更多产能分配给超大规模云厂商、新型云厂商，还是分配给参与其兜底计划的新型云厂商——在该计划下，英伟达为集群提供信用支持，并分得云收入的一部分。这家"英伟达中央银行"的信用完全建立在黄仁勋的个人信誉之上。下一任 CEO 不太可能像黄仁勋那样做出大胆的押注。

Nvidia likes to decide based on what's feasible, but much of it comes down to what makes strategic sense. It doesn't always make strategic sense to skip the hyperscalers, or to work with them and treat them preferentially. Many of these customers now need reassurances that they will continue to be supported by Nvidia

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

through financial guarantees or allocation. Nvidia disclosed $530B of gross off-balance-sheet guarantees as of its fiscal second quarter, up from $184B the prior quarter, including $36B of take-or-pay floors under neocloud capacity, and it holds a $99B equity book.

英伟达倾向于基于可行性来做决定，但其中很大程度上取决于什么在战略上合理。跳过超大规模云厂商并不总是具有战略意义，与它们合作并给予优惠待遇也未必总是合理。如今，许多客户需要得到保证，即英伟达将继续通过财务担保或额度分配来支持它们。英伟达披露，截至其财年第二季度，其表外担保总额达5300亿美元，高于上一季度的1840亿美元，其中包括为新型云厂商产能提供的360亿美元照付不议（take-or-pay）下限承诺，此外英伟达还持有990亿美元的股票投资组合。

Many customers also want a deal with Jensen for reasons that go beyond the numbers. Neoclouds around the world raised their money because Jensen backed them, not because they compared chips and chose Nvidia. Nvidia's backstops let neoclouds and neolabs raise money without the hyperscalers: it sells GPUs at full margin on day one, then floors the buyer's revenue, guarantees the buyer's landlord or signs the lease itself, so that operators without an investment-grade rating can borrow at investment-grade pricing. If the Jensen put is not there, there might be a large contraction in this ecosystem.

许多客户想与 Jensen 达成交易，原因也超出了数字层面。全球各地的新云厂商之所以拿到融资，是因为 Jensen 在背后背书，而不是因为它们比较了各家芯片后选择了英伟达。英伟达的兜底安排让新云厂商和新实验室得以绕开超大云厂商融资：它在第一天就按完整利润率出售 GPU，随后为买方的收入托底，为买方的房东提供担保或直接自己签下租约，从而让没有投资级评级的运营商也能按投资级定价借到钱。如果“Jensen 看跌期权”不复存在，这个生态系统可能会出现大幅收缩。

The Supply Chain Stranglehold Loosens

供应链的扼制正在松动

Nvidia has a stranglehold on its suppliers. If competitors had access to supply, they would ship much higher volume. They can't get it because Jensen has personally

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

locked up memory in South Korea and chips in Taiwan. As we wrote in The Great AI Silicon Shortage, Nvidia has locked in most of the supply for logic wafers, memory and various other necessary components, and Jensen's 2025 trip to Korea was to secure memory supply, before other executives quite realized how in shortage memory was. Our industry clients thought our forecasts for 2026 were too aggressive, but then they realized we were right. Nvidia's supply and capacity commitments jumped from $119B to $279B in a single quarter, primarily for memory.

英伟达对其供应商形成了扼制。如果竞争对手能获得供应，它们的出货量会高得多。它们拿不到，是因为 Jensen 亲自锁定了韩国的存储和台湾的芯片。正如我们在《AI 硅片大短缺》中所写，英伟达已经锁定了逻辑晶圆、存储以及其他多种必要零部件的大部分供应；Jensen 2025 年的韩国之行就是为了确保存储供应，当时其他高管还没有完全意识到存储短缺到了什么程度。我们的行业客户原本认为我们对 2026 年的预测过于激进，但后来他们意识到我们是对的。英伟达的供应与产能承诺在单个季度内从 1190 亿美元跃升至 2790 亿美元，其中大部分用于存储。

That stranglehold is personal. Jensen was the one who won these deals, CEO to CEO, with the major supply chain companies around the world. In Korea, we estimate SK Hynix's 2027 HBM4 pricing could range from roughly $3.0 to $3.3 per Gb for Nvidia versus $3.7 to $4.1 per Gb for other Tier 1 customers including AMD, Broadcom, Amazon and Google, and we believe there is an implicit understanding that Nvidia gives SK Group priority GPU allocation in return. Without him, these firms will no longer prioritize Nvidia to the same degree, and capacity will be easier for others to acquire. We think it's likely that in 2028 more than 70% of total capacity could be non-Nvidia.

这种掌控带有强烈的个人色彩。这些交易正是由 Jensen 以 CEO 对 CEO 的方式，与全球主要供应链企业逐一谈下来的。在韩国，我们估计，SK 海力士 2027 年 HBM4 对英伟达的报价可能约为每 Gb 3.0 至 3.3 美元，而对 AMD、博通、亚马逊和 Google 等其他一线客户的报价则为每 Gb 3.7 至 4.1 美元；我们认为，双方存在一种默契：英伟达以此换取 SK 集团优先获得 GPU 分配。如果没有他，这些企业不会再像现在这样优先照顾英伟达，产能也会更容易被其他厂商拿到。我们认为，到 2028 年，超过 70% 的总产能可能不再服务于英伟达。

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

What's more, beyond strangling the supply, Jensen's vision is what pushed the supply chain in Taiwan to invest harder and believe more in this buildout than anyone else. Jensen's legendary supply chain dinners and commitments are what pushed suppliers in Taiwan to deliver on technologically and logistically aggressive plans.

更重要的是，除了扼住供给，正是 Jensen 的愿景推动台湾供应链加大投入，并比任何人都更坚定地相信这轮建设。Jensen 那些颇具传奇色彩的供应链晚宴和承诺，正是促使台湾供应商在技术和物流层面都敢于执行激进计划的原因。

The AI Industry Loses Its Open Source Spokesman

AI 行业失去它的开源代言人

Without Jensen, the AI industry loses its chief spokesman. He was everywhere, speaking on AI as its chief proponent. He was the face of AI, and no one can replace that.

没有 Jensen，AI 行业就失去了它最重要的代言人。他无处不在，始终以 AI 首席倡导者的身份发声。他就是 AI 的面孔，而这一点无人能替代。

Jensen also set Nvidia's China policy and led its push for open source AI models, which give countries, enterprises and neoclouds a reason to buy GPUs beyond the handful of frontier labs, who are now building their own chips.

Jensen 还主导了英伟达的中国政策，并推动其支持开源 AI 模型；这些模型让各国、企业和 neocloud 有理由继续购买 GPU，而不只是依赖少数前沿实验室，因为这些实验室如今都在自研芯片。

As we wrote in September, no one needs open source AI more than Nvidia: it is on track for a world where it has only two real customers, Anthropic and OpenAI, or seven including the hyperscalers, and all seven except SpaceX are trying to build their own XPUs to cannibalize Nvidia's margins. AI models and applications are the complements to its GPUs.

正如我们 9 月所写，没有谁比英伟达更需要开源 AI：它正走向一个只有 Anthropic 和 OpenAI 两个真正客户、若把超大规模云厂商也算进去则共有七个客户的世界；而在这

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

七家中，除 SpaceX 外，其余都在设法打造自己的 XPU，以侵蚀英伟达的利润。AI 模型和应用，才是其 GPU 的互补品。

It is an open secret that Chinese frontier labs use Blackwell GPUs & NVIDIA DevTech collaborates closely with the Chinese frontier labs & learns a lot from their end users, which results in innovations to the CUDA ecosystem like wide expert parallelism, DeepGEMM, DeepEP etc. These then spread to the western open source community and startups. These startups are massively negatively impacted by the departure.

中国前沿实验室使用 Blackwell GPU 已是公开的秘密，NVIDIA 开发者技术团队（DevTech）与中国前沿实验室紧密合作，并从最终用户那里获得大量反馈，由此推动了 CUDA 生态的创新，例如宽专家并行（wide expert parallelism）、DeepGEMM、DeepEP 等。这些创新随后传播到西方开源社区和初创公司。而这些初创公司正因（相关人员的）离开而受到极大的负面影响。

Without Jensen being the spokesperson and offering financial and engineering help for open models, Chinese labs may not be able to open source kernel libraries like MiniMax MSA, DeepGEMM, DeepEP, Moonshot's FlashKDA, which are clearly targeted at NVIDIA Blackwell GPUs. Many production engines used widely across the world like SGLang & vLLM use these innovations from Chinese labs. Chinese labs may have to go back to straight up denying that they have any NVIDIA GPUs and keep their NVIDIA software internal only instead of open sourcing Blackwell software.

如果黄仁勋不再作为发言人，也不再为开放模型提供资金与工程支持，中国实验室或许将无法再开源这些内核库，例如 MiniMax MSA、DeepGEMM、DeepEP、月之暗面的 FlashKDA——这些库明显针对 NVIDIA Blackwell GPU。全球广泛使用的许多生产级推理引擎，如 SGLang 和 vLLM，都采用了来自中国实验室的这些创新。中国实验室可能不得不重新彻底否认拥有任何 NVIDIA GPU，并且只将 NVIDIA 相关软件保留在内部，而不再开源面向 Blackwell 的软件。

This is fundamentally bad that innovations from China won't be shared across the NVIDIA ecosystem & the general ML ecosystem anymore. It is positive for closed AI

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

labs but bad for startups.

从根本上看，这很糟糕：来自中国的创新将不再分享到整个 NVIDIA 生态以及更广泛的机器学习生态中。这对闭源 AI 实验室有利，但对初创公司不利。

A manager lead company could depriortize underperforming Nemotron, With many models going closed source at the frontier labs in the U.S., Nvidia was single-handedly propping up the other American open source models with its efforts by investing in firms like Reflection, Thinking Machines, Poolside, and the Hugging Face acquisition.

一家由经理主导的公司可能会降低表现不佳的 Nemotron 的优先级。随着美国前沿实验室的许多模型转向闭源，NVIDIA 一直在以一己之力支撑美国其他的开源模型，方式是投资 Reflection、Thinking Machines、Poolside 等公司，并收购 Hugging Face。

Nvidia was the one pushing continuous engagement with China, on the argument that China should use and rely on American technology. As we wrote last year, after the U.S. government banned the H20 from going into China and then indicated Nvidia would be granted a license to export it, the U.S. needs to balance having China on the U.S. AI stack and slowing the development of its own, while also limiting the quality and volumes shipped into China. Now, what if he was pushing it from a compromised place? That is up to the investigation to figure out. Clearly the China hawks are winning, so we have to ask a bit of an odd question. Why now?

英伟达一直是推动与中国保持持续接触的一方，其论点是，中国应当使用并依赖美国技术。正如我们去年所写，在美国政府禁止 H20 进入中国、随后又表明将授予英伟达出口许可之后，美国需要在中国使用美国 AI 技术栈与放缓中国自身技术发展之间取得平衡，同时还要限制输往中国的产品质量与数量。现在的问题是，如果他推动这一立场时存在被拿捏的把柄呢？这有待调查来厘清。显然，对华鹰派正在占上风，因此我们不得不问一个有些奇怪的问题：为什么是现在？

Why Now Does Jensen's Personal Life Come to Light?

为什么黄仁勋的私生活现在才被曝光？

We aren't ones for conspiracy theories, but a few events around the same time seem to create a narrative that is hard to ignore. The intelligence community had much to gain. The second New York Times story on the topic explicitly states (five times) that the basis for its reporting is the U.S. intelligence community. Trump, Rubio and Lutnick have known about all of this since before their trip to China in May. What's more is that there is reporting that Lutnick stalled the Chinese chip crackdown. Something has shifted in that relationship, and now the wind is blowing in the other direction.

我们并不热衷于阴谋论，但同一时间发生的几件事似乎构成了一个难以忽视的叙事。情报界从中获益颇多。《纽约时报》关于该话题的第二篇报道明确提到（五次），其报道依据来自美国情报界。特朗普、鲁比奥和卢特尼克早在 5 月访华之前就已经知晓这一切。更有报道称，卢特尼克曾拖延对华芯片管制。这段关系中有些东西已经发生了变化，如今风向正在转向另一边。

We actually don't believe Alice Huang is a spy in the traditional sense. She is a well connected business woman. She like any other well connected business person in China, has contact with the CCP.

我们实际上并不认为 Alice Huang 是传统意义上的间谍。她是一位人脉广泛的商界人士。与中国其他人脉广泛的商界人士一样，她与中共存在联系。

Our Accelerator Model has tracked over 1.5GW of Nvidia GPUs that shouldn't be in China, The Department of Commerce now also finally believes that there is more than 1.5GW of NVIDIA chips in China that shouldn't be there. Now, with the midterms swinging the Democrat's way, someone has decided it is time to put the hammer down both to stop the willing circumvention of the existing export controls and to expand them to cut off China's access to frontier chips once and for all.

我们的加速器模型已追踪到超过1.5吉瓦（GW）的英伟达GPU，这些GPU本不应出现在中国。商务部现在也终于相信，中国境内存在超过1.5吉瓦的英伟达芯片，而这些芯

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

片本不应在那里。如今，随着中期选举向有利于民主党的方向倾斜，有人决定是时候采取强硬手段了，既要制止蓄意规避现有出口管制的行为，又要扩大管制范围，以彻底切断中国获取前沿芯片的途径。

To be clear, the Trump administration is split on the issue, but Trump was giving Lutnick cover. Trump is no longer providing that cover. What's more, there is a critical bill called the Remote Access Security Act ("RASA") that has passed the House that has yet to receive a vote in the Senate, and that vote is happening right now.

需要明确的是，特朗普政府内部在这一问题上存在分歧，但特朗普此前一直在为卢特尼克提供政治掩护。特朗普不再提供这种掩护了。更重要的是，有一项名为《远程访问安全法案》（Remote Access Security Act，简称"RASA"）的关键法案已在众议院获得通过，但尚未在参议院进行表决，而表决正在进行中。

RASA Up for a Vote

RASA 即将表决

RASA passed the House 369-22 on Jan. 12. It passed on a motion to suspend the rules, which requires a two-thirds majority. The House Foreign Affairs Committee approved it 51-0 in April 2025. Though it was referred to the Senate Banking Committee, it hasn't yet received a vote. We know that NVIDIA and Oracle have been lobbying against it, hard.

RASA于1月12日以369票对22票在众议院获得通过。该法案依据"暂停议事规则动议"（motion to suspend the rules）获得通过，这一程序要求三分之二多数。众议院外交事务委员会于2025年4月以51票对0票批准了该法案。尽管该法案已被提交至参议院银行委员会，但尚未进行表决。我们知道，英伟达和甲骨文一直在大力游说反对该法案。

Of course, RASA isn't the only way that the U.S. government can stop Chinese companies from accessing GPUs remotely. But RASA is the bill that is the hot topic of discussion in Washington right now. It is clearly popular, having already passed the House, and the substantive portions of the bill seem downright obvious to people.

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

Why allow Chinese companies to access GPUs remotely that they aren't allowed to import?

当然，RASA并不是美国政府阻止中国企业远程访问GPU的唯一途径。但RASA是目前华盛顿讨论的热门法案。它显然很受欢迎，已经在众议院获得通过，而且该法案的实质性内容对人们来说似乎再明显不过。为什么要允许中国企业远程访问他们不被允许进口的GPU？

For what it's worth, we are aware of neoclouds in Asia, Australia, the Middle East, Nordics, Europe, Canada and even the U.S. that are actively selling capacity to Chinese companies. All of them would be impacted by this bill. This is another global export control bill, and one with far-reaching implications. Jensen, and likely Lutnick, did **not** want this to happen.

需要说明的是，我们了解到在亚洲、澳大利亚、中东、北欧、欧洲、加拿大乃至美国，都有 neocloud 正在积极向中国公司出售算力。这些服务商都会受到这项法案的影响。这是又一项全球性出口管制法案，其影响极为深远。Jensen，很可能还有Lutnick，都**不希望**事情发展到这一步。

So let's go against the popular narrative and explore the possibility that despite all of the recent headlines, **passing RASA (or something like it) will have unintended consequences**. To follow the old adage about American politics, we believe that if all the politicians agree on something, it's probably a bad idea.

因此，让我们抛开当前的主流叙事，探讨这样一种可能性：尽管近期 headlines 不断，**通过 RASA（或类似法案）可能会带来意想不到的后果**。按照美国政治的那句老话，我们相信，如果所有政客在某件事上达成一致，那这大概率是个坏主意。

As we stated earlier, here are the clear benefits of the current regime where Chinese labs are able to access GPUs remotely:

如前所述，在现行制度下，中国实验室能够远程使用 GPU，这带来了以下明显好处：

- Profits flow to American companies.
- 利润流向美国公司。

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

- The US can monitor what Chinese labs are doing.
- 美国可以监控中国实验室的动向。
- The US can cut off their access to the GPUs through politics or by force almost instantly, if they choose.
- 如果选择这样做，美国几乎可以通过政治手段或强制方式，瞬间切断他们使用 GPU 的权限。
- American companies such as NVIDIA, AMD, Broadcom, Google, Amazon, Microsoft, Meta, Supermicro, and Dell all depend on Chinese companies in their supply chain.
- NVIDIA、AMD、Broadcom、Google、Amazon、Microsoft、Meta、Supermicro 和 Dell 等美国公司，其供应链都依赖中国公司。
- American companies such as NVIDIA and AMD employ Chinese engineers (who live in China, to be clear) to develop hardware and low-level software for their GPU systems. Without these engineers, we are certain that the user experience for these GPUs would be materially worse than it is today.
- NVIDIA 和 AMD 等美国公司雇佣了中国工程师（明确说，是居住在中国的工程师）来开发 GPU 硬件和底层软件。没有这些工程师，我们可以肯定，这些 GPU 的用户体验会比现在差得多。
- American companies benefit from the open source research that Chinese companies, students and independent researchers publish using these GPUs today.
- 美国公司受益于中国公司、学生和独立研究人员使用这些 GPU 发布的开源研究成果。
- China is (even slightly) less motivated to use their domestic accelerators.
- 中国（哪怕只是程度稍轻）转向国产加速器的动力也会因此减弱。
- Innovations from China flow globally through open innovations of wide expert parallelism, OSS kernel libraries: MSA, DeepEP, DeepGEMM, etc.
- 来自中国的创新通过广义专家并行、开源 kernel 库等开放创新形式流向全球：MSA、DeepEP、DeepGEMM 等。

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

To be clear: in a world where Chinese labs are completely cut off from accessing NVIDIA GPUs, they would all be even more motivated to move off of NVIDIA GPUs and onto domestic accelerators.

需要明确的是：在一个中国实验室被完全切断 NVIDIA GPU 访问权限的世界里，他们转向国产加速器、彻底摆脱 NVIDIA GPU 的动力只会更强。

Which is already happening today.

而这在今天已经发生了。

- In February, Z.ai claimed inference support for GLM-5 on seven domestic accelerators
- 今年 2 月，智谱 AI（Z.ai）宣布 GLM-5 支持在七款国产加速器上进行推理
- In April, DeepSeek published their V4 paper and later open-sourced an inference megakernel for the V4 Pro model on Huawei Ascend NPUs.
- 今年 4 月，DeepSeek 发布了 V4 论文，随后又针对 V4 Pro 模型在华为昇腾 NPU 上开源了一个推理 megakernel。
- In June, Meituan claimed LongCat 2.0, which claimed that it was pretrained entirely on Huawei Ascend 910B NPUs.
- 今年 6 月，美团宣布推出 LongCat 2.0，并称该模型完全基于华为昇腾 910B NPU 进行预训练。

Last, one more technical contribution lies in the fact that, from the first day, GLM-5 is full-stack adapted to Chinese GPU ecosystems. We have successfully completed deep optimization—spanning from underlying kernels to upper-level inference frameworks—across seven mainstream domestic chip platforms, including Huawei Ascend, Moore Threads, Hygon, Cambricon, Kunlunxin, MetaX, and Enflame.

chips. Many Americans learn from Chinese open source contributions. Many of the raw materials needed to produce these chips come from China. Many of the L1-6 ODM board and component suppliers are Chinese.

政客们仍未看清中国、台湾与美国之间关系的实际纠缠程度。许多中国公民在前沿实验室工作。许多中国工程师受雇于英伟达和 AMD，编写底层代码以完成新芯片的 bring-up。许多美国人从中国的开源贡献中学习。制造这些芯片所需的许多原材料来自中国。许多 L1-6 ODM 板卡和元器件供应商也是中国公司。

Escalating tensions will guarantee that less chips are produced, and the pace of AI progress slows for everyone.

紧张局势升级将必然导致芯片产量减少，所有人的 AI 进展速度都会放缓。

We believe the US should limit or control how much comprue is delivered to Chinese labs, and banning export to China while allowing remote access by trusted clouds is a the best method to do this.

我们认为，美国应当限制或控制向中国实验室交付的算力规模，而在禁止对华出口的同时，允许受信任的云厂商提供远程接入，是实现这一目标的最佳方式。

Export Control Violations and Enforcement

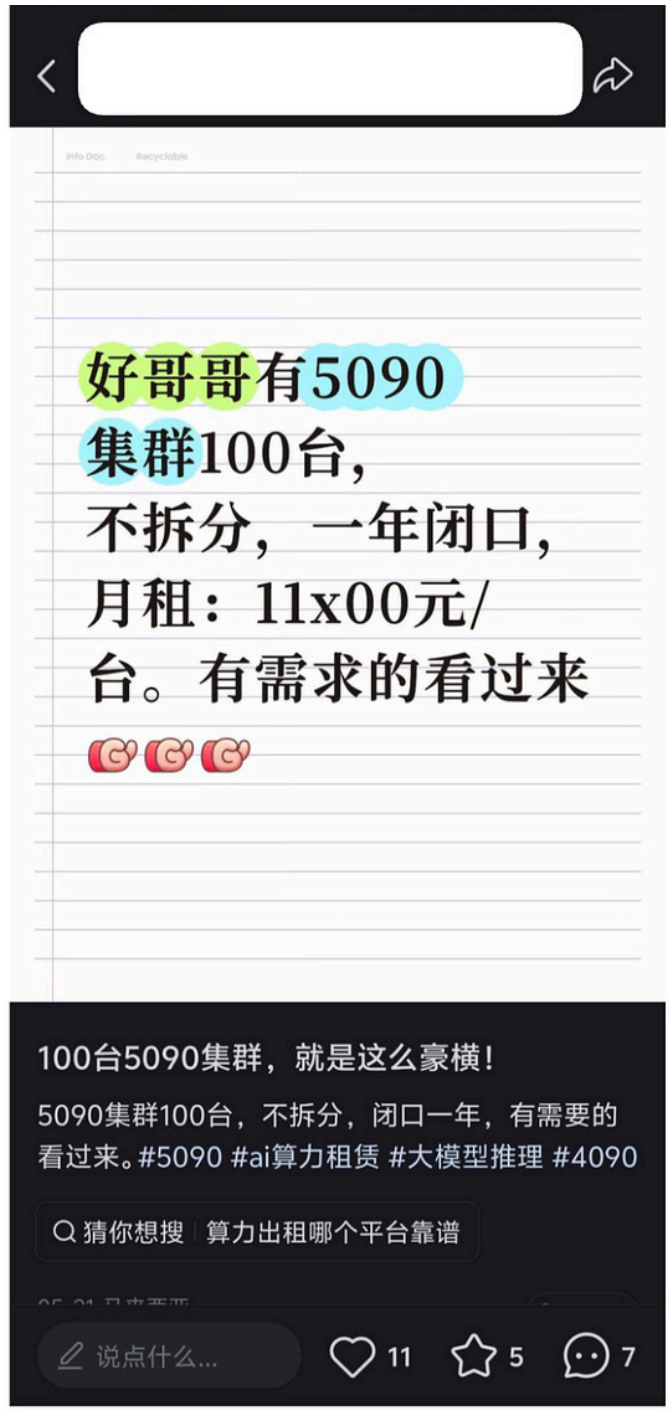

出口管制违规与执法

For all those who say that there is no way GPUs can be smuggled into China and advertised for rental on rednote because they’re too heavy to fit in a backpack, we disagree.

对于那些声称 GPU 不可能被偷运进中国、也不可能在红书上挂牌出租，因为“GPU 太重、塞不进背包”的人，我们不同意。

> *companies that we sell to recognize that diversion is not allowed and everybody would like to continue to buy Nvidia technology." - Jensen Huang at Computex in May 2025*

> *"我们研究了他们部署我们 GPU 的所有案例，并逐一清点。没有任何证据表明存在 AI 芯片转移。这些都是大型系统。Grace Blackwell 系统接近两吨重，所以你不可能很快把它塞进你的口袋或背包。重要的是，我们销售 GPU 的国家和公司都认识到，转移是不被允许的，而每个人都希望继续购买英伟达的技术。"——黄仁勋，2025 年 5 月台北国际电脑展*

Since then, we have at least two high profile counter examples: $2.5B worth of servers being smuggled by 3x people at Supermicro, and $65M worth being smuggled by 9x people at NVIDIA, Supermicro, Albatron, Flying Tiger, and Chief Telecom (a Taiwanese distributor, reseller, and datacenter operator).

自那以后，我们至少看到两个备受瞩目的反例：价值 25 亿美元的服务器由超微电脑（Supermicro）的 3 人走私，以及价值 6,500 万美元的服务器由英伟达、超微电脑、Albatron、Flying Tiger 和 Chief Telecom（一家台湾分销商、经销商和数据中心运营商）的 9 人走私。

The first $2.5B story is about Wally Liaw, a co-founder of SuperMicro and their Head of Sales. Wally was indicted on March 17, 2026 (US v. Liaw, 1:26-cr-00100, SDNY) along with Steven Chang (Head of Sales for Taiwan) and Willy Sun (local Taiwan contractor). The indictment states that $2.5B worth of servers were sold to a company in Southeast Asia that then $510M were smuggled into China. It also claims that Wally, Steven and Willy staged dummy servers to pass a company audit in Aug 2025, and a Commerce Department audit in Dec 2025.

第一起 25 亿美元案件的主角是梁见后（Wally Liaw），他是超微电脑的联合创始人兼销售主管。梁见后于 2026 年 3 月 17 日被起诉（美国诉梁见后案，1:26-cr-00100，纽约南区联邦地区法院），同案被告还包括张姓人士 Steven Chang（台湾销售主管）和台湾当地承包商孙姓人士 Willy Sun。起诉书称，价值 25 亿美元的服务器被卖给一家东南亚公司，随后其中 5.1 亿美元的服务器被走私进入中国。起诉书还声称，梁见后、Steven 和 Willy 在 2025 年 8 月为通过公司内部审计、在 2025 年 12 月为通过商务部审计，布置了假服务器。

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

The indictment literally includes a picture of Willy Sun and his friend using a hair dryer to move labels and serial number stickers from real servers to dummy servers so they could pass an audit.

起诉书中甚至附有一张照片，显示 Willy Sun 和他的朋友用吹风机把真实服务器上的标签和序列号贴纸转移到假服务器上，以便通过审计。

27. On or about December 18, 2025, the day before BIS's scheduled PSV, TING-WEI "Willy" SUN, the defendant, and Broker-1, arrived at a warehouse rented by Company-1. Once there, SUN, Broker-1, and others staged dummy servers to present to BIS. The group unboxed the dummy servers; used a hair dryer to remove and affix labels and serial number stickers to the server boxes and to the dummy servers themselves; and then re-packaged the dummy servers in the U.S. Manufacturer's boxes. Surveillance cameras recorded their work and captured them preparing the dummy servers, including as shown in the images below, in which SUN (left) and Broker-1 (right) are circled in white:

日）删除手机上的加密通讯应用。他于 10 月 8 日认罪，量刑定于明年 9 月 8 日。

- Steven is currently considered a fugitive.
- Steven 目前被视为逃犯。

For example, the Company received a subpoena from the SEC requesting the production of documents relating to certain customers, including one customer that is the subject of the allegations in the Indictment, and the Company's controls and procedures. We are cooperating with the SEC's requests, but we cannot predict the scope, duration, or outcome of this matter, and the SEC may issue additional subpoenas or other information requests.

Source: Supermicro's 10-K from August

来源：Supermicro 8 月发布的 10-K

Moving on to the second case in Keelung, Taiwan. 9 people have been indicted (so far) for smuggling 130 B300 servers, with 74 reaching China earlier this year:

接下来是台湾基隆的第二起案件。目前已有 9 人被起诉，罪名涉及走私 130 台 B300 服务器，其中 74 台已于今年早些时候运抵中国大陆：

- Chang Teng-lung, Senior Manager NVIDIA Taiwan (key figure)
- 张腾龙（Chang Teng-lung），NVIDIA 台湾高级经理（关键人物）
- Lin and Wang, Sales Managers at Supermicro Taiwan
- 林姓和王姓人士，Supermicro 台湾销售经理
- Lu, CEO of Albatron, a Supermicro distributor
- 卢姓人士，Supermicro 分销商 Albatron 首席执行官
- Chen, President of Flying Tiger, a server reseller
- 陈姓人士，服务器经销商 Flying Tiger 总裁
- Tsai, Project Manager at Chief Telecom, a datacenter operator
- 蔡姓人士，数据中心运营商 Chief Telecom 项目经理
- Yu, head of a customs clearance company
- 余姓人士，一家报关公司负责人

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

- Wang #2, Head of a server reseller company
- 第二名王姓人士，一家服务器经销商公司负责人
- An unnamed 9th defendant who siphoned money from Albatron
- 一名未具名的第九被告，涉嫌从 Albatron 挪用资金

As the story goes, the Taiwan Coast Guard came across the servers during a drug-smuggling investigation in May and detained three people. They then searched 12 more locations, and seized 56 servers, luxury cars, and NT$9M (about $275k USD) in cash.

据报道，台湾海巡署在 5 月一次毒品走私调查中发现了这些服务器，并拘留了三人。随后，他们又搜查了另外 12 处地点，查获 56 台服务器、多辆豪车以及 900 万新台币（约合 27.5 万美元）现金。

Following this, the people from Supermicro, Albatron and Chief Telecom were indicted in June, they got Chang from NVIDIA in July, and by August they had all 9. The first hearing for Chang was held on Oct 16.

此后，Supermicro、Albatron 和 Chief Telecom 的相关人员于 6 月被起诉，7 月又抓获了 NVIDIA 的张姓人士，到 8 月 9 名被告全部到案。张姓人士的首次庭审于 10 月 16 日举行。

The defendants are accused of using shell companies, faking the audit, forging documents (including a mockup of a Supermicro website for export permits), and declaring the exports for Japan, where they would be shipped on to China.

被告被控使用空壳公司、伪造审计、伪造文件（包括为出口许可制作 Supermicro 网站的仿冒页面），并将出口目的地申报为日本，再由日本转运至中国大陆。

For what it’s worth, current process on orders above eight servers triggers an onsite inspection by Supermicro. The coast guard’s inspection apparently found the servers by chance, while pursuing an unrelated drug-smuggling case. This inspection happened after Flying Tiger had applied and received a license to purchase 130 servers from Supermicro in Sep 2025 with themselves named as the end user, and

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

passed an onsite inspection at a Chief Telecom datacenter. The inspection was supposed to confirm they had enough rack space and power to fit the servers, but prosecutors claim it’s obvious that the site doesn’t meet these requirements. They didn’t even have a lease signed.

顺带一提，目前超过八台服务器的订单会触发 Supermicro 的现场检查。海岸警卫队的检查据称是在侦办一起无关的毒品走私案时，意外发现了这些服务器。这次检查发生在 Flying Tiger 于 2025 年 9 月申请并获得从 Supermicro 购买 130 台服务器的许可之后；许可中 Flying Tiger 将自己列为最终用户，并通过了一次在 Chief Telecom 数据中心的现场检查。那次检查本应确认他们有足够的机架空间和电力来容纳这些服务器，但检方认为，该场地显然不满足这些要求。他们甚至没有签署租约。

Here is a picture from the indictment showing Supermicro servers on pallets with crime scene tape around them, cash, and a porsche

这是起诉书中的一张照片，显示放在托盘上、周围围着犯罪现场胶带的 Supermicro 服务器，以及现金和一辆保时捷。

Both of these cases are being litigated.

这两起案件目前都在诉讼中。

It’s Likely Worse Than We Thought

情况很可能比我们想的更糟

So, if we had to say “why now,” it’s likely to remove opposition to an extremely hawkish China export control bill: after a large shift in Congress and heading into a lame duck session, it’s best to get your opposition out of the way to get the bill

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

passed. That is our best conspiracy theory take on the situation, and it lines up with the ripples from Washington. So now let's return to our original question.

所以，如果一定要问“为什么是现在”，很可能就是为了消除对一项极端强硬的对华出口管制法案的反对：在国会格局发生重大变化、并进入跛脚鸭会期之际，最好提前扫清反对力量，推动法案通过。这是我们对当前局势最合理的“阴谋论”式判断，也与华盛顿传来的各种动向相吻合。那么，现在让我们回到最初的问题。

What Does Nvidia Look Like Without Jensen?

没有黄仁勋的英伟达会是什么样子？

There is really only one other case study of a visionary founder company at this size and scale to have gone on well without the big man in charge, and that is Apple and Steve Jobs. We believe that Jensen leaving is clearly the end of the visionary founder era, and it's impossible to run the company as hard without the person who built it at the helm. Let's use a car analogy: no one is willing to break the car someone else built, while Jensen was comfortable driving 150 mph on the highway.

在如此规模和体量下，真正称得上“没有灵魂人物掌舵仍能良好运转”的远见型创始人公司案例，其实只有一个，那就是苹果和史蒂夫·乔布斯。我们认为，黄仁勋的离开显然意味着远见型创始人时代的终结；没有缔造这家公司的人亲自掌舵，公司不可能再像过去那样高速运转。用一个汽车比喻来说：没有人愿意拆掉别人造的车，而黄仁勋却敢在高速公路上以每小时 150 英里的速度狂奔。

Whoever is promoted to keep the status quo and move the company from founderled to manager-led likely will have to address a nice problem to have: what to do with all that cash. Jensen clearly had a vision of being a balance-sheet backstop to the ecosystem to extend and expand credit for neoclouds to the labs. This was a logical extension of supply chain dominance.

无论谁被提拔上来维持现状、并推动公司从“创始人领导”转向“职业经理人领导”，都很可能要面对一个幸福的烦恼：如何处置如此庞大的现金。黄仁勋显然有一个愿景，即成为整个生态体系的资产负债表后盾，把信贷资源延伸并扩展到 neocloud，直至各 AI 实验室。这是其供应链主导地位在逻辑上的自然延伸。

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

But a professional manager will likely do something else that does sort of work: buybacks. Apple after Jobs is the best example of a company that did well after a founder transition. We think it is entirely possible that the only playbook that has ever worked at this scale gets run again. The founder moves to a professional manager, and the company becomes more conservative and returns cash. Shareholders are happy, but the company doesn't push at the pace it once did in technology.

但专业经理人可能会做另一件某种程度上确实有效的事：回购。乔布斯之后的苹果，是创始人交接后仍表现优异的最佳范例。我们认为，那本唯一在如此规模上行之有效的剧本，完全有可能被再次上演：创始人交棒给专业经理人，公司变得更加保守并返还现金。股东会很高兴，但公司在技术推进上却不再拥有昔日的速度。

For technology, this is a bad outcome. For shareholders? It will be a bad outcome. But clearly Jensen will be missed, and the unique company that is Nvidia is about to become more ordinary. The infighting and digestion of the behemoth will be felt internally and globally as supply chains shift from following the bold words of Jensen to the mundane vision of a manager. The technology world will be a different place without him.

对技术而言，这是一个糟糕的结果。对股东呢？这同样会是一个糟糕的结果。但显然，Jensen 将会被怀念，而独一无二的英伟达也即将变得平庸。随着供应链从追随 Jensen 的豪言壮语转向一位经理人的平庸愿景，这头巨兽的内斗与消化将在公司内部和全球范围内被感知。没有他，科技世界将不再是原来的样子。

Our current bet is that Ian Buck is the most likely front-runner, followed closely by Kress as permanent CEO. An outside CEO such as Johny Srouji has been rumored, but given how unique Nvidia is, it's best in our view if someone inside the company is promoted. There are very few options, and it is yet to be determined whether anyone wants the job. Only titans of industry can even hope to be as good as Jensen, and we doubt titans like Lisa or Hock will hop ship.

我们目前的判断是，Ian Buck 是最有可能的领跑者，紧随其后的是 Kress，可能出任正式 CEO。也有传言称外部 CEO 人选如 Johny Srouji，但考虑到英伟达的独特性，我们认为最好由公司内部人士晋升。可选人选极少，而且尚不确定是否有人愿意接

知识星球：前沿信息收录
一手投研资料请加微信：FCCNN88

任。只有产业巨头才有可能做到像 Jensen 那样出色，而我们怀疑 Lisa 或 Hock 这样的巨头会跳槽。

Regardless, this is really good for all Nvidia competitors, and really bad for Nvidia supply chain.

无论如何，这对所有英伟达的竞争对手都极为有利，而对英伟达的供应链则极为不利。
