TMTB Morning Wrap TMTB 晨间综述

TMT BREAKOUT
18 MINUTES AGO • PAID

Listen

Good Morning. **QQQs -15bps** after a sea of red yesterday with **Oil +1.3%**. **Yields +2-3bps** across the curve. Lots of pain across the board yesterday: GS said Global Fundamental L/S managers, Multi-strats and Systematics all fell more than 1% on the same day for first time since Covid

早上好。昨天市场整体呈下跌态势，QQQ 指数下跌了 15 个基点，而石油相关资产则上涨了 1.3%。各期限债券的收益率也上升了 2-3 个基点。昨天几乎所有资产类别都出现了大幅下跌：高盛称，全球基本面策略型基金、多策略基金以及系统化策略基金的跌幅均超过了 1%，这是自新冠疫情以来首次出现这种情况。

In Tech, **Semis flat** while **software -1%**. **WDC -2%** despite handedly beating bogeys, **BE -4%** on a beat and raise, **SPCX +2%** on a sell-side upgrade and on reports they're in talks to access 80k cell sites **(Towers +7-8%; Telcos -4-5%)**. **INFY -7%** on lowered rev guide. RNG +15% on a set of good numbers.

科技板块中，半导体持平，软件下跌 1%。WDC 尽管大幅超出预期仍下跌 2%，BE 因超预期并上调指引下跌 4%，SPCX 因卖方上调评级以及有报道称其正洽谈接入 8 万个基站而上涨 2%（铁塔公司上涨 7-8%；电信运营商下跌 4-5%）。INFY 因下调营收指引下跌 7%。RNG 因一组良好数据上涨 15%。

Asia held in well despite the big declines yesterday in U.S.: TPX -0.79%, NKY -0.34%, Hang Seng +0.69%, HSCEI +0.87%, SHCOMP +0.89%, Shenzhen +2.44%, Korea KOSPI +0.3%. **Hynix +4%; Samsung +0.5%**

尽管美国市场昨日大幅下跌，亚洲市场依然表现稳健：TPX 下跌 0.79%，NKY 下跌 0.34%，恒生指数上涨 0.69%，HSCEI 上涨 0.87%，上证指数上涨 0.89%，深证成指上涨 2.44%，韩国 KOSPI 指数上涨 0.3%。海力士股价上涨 4%，三星股价上涨 0.5%。

We'll hit **WDC BE VRSN RNG** Earnings first, then onto the usual. Happy Friday! Let's get to it...

我们先来看 WDC BE VRSN RNG 的业绩情况，然后再讨论其他常规内容。祝大家周五愉快！那我们开始吧.....

WDC -2%: Beat and Raise above buyside bogeys, pricing Is Still Accelerating, but pushback is lower cost/TB decline and concerns around supply with higher capex

WDC：跌幅为-2%；表现优于市场预期，价格仍在上涨，不过面临成本下降、存储容量减少以及高资本支出带来的供应问题等挑战。

Recap: FQ1 revenue/EPS of $4.38B/$4.64 beat Street $4.14B/$4.10 on $/TB up 28% y/y. The FQ2 guide of $5.1B/$5.80 is ~12%/~20% above Street ($4.57B/$4.82), with GM guided to 60-61% vs. Street ~57.4%. FQ2 guide implies ~52.6% OM (Street ~49%) and ~75% q/q incremental GM. Opex steps up to $400-410M on product qualification costs.

回顾：第一财季营收/每股收益为 43.8 亿美元/4.64 美元，超出华尔街预期的 41.4 亿美元/4.10 美元，每 TB 价格同比上涨 28%。第二财季指引为 51 亿美元/5.80 美元，较华尔街预期（45.7 亿美元/4.82 美元）高出约 12%/约 20%，毛利率指引为 60-61%，而华尔街预期为 57.4%。第二财季指引隐含营业利润率约 52.6%（华尔街预期约 49%），以及环比增量毛利率约 75%。由于产品认证成本，运营费用增至 4 亿至 4.1 亿美元。

$/TB accelerated to +28% y/y (from ~18% last q), mgmt expects Dec-Q growth to be higher still with pricing mostly locked, and it sees room to keep expanding y/y gains for another 3-4 quarters, which is driving ~80% incremental GMs. Exabytes (+22% y/y, below the >25% target for a second straight quarter) and cost/TB (only ~4-5% lower y/y on DRAM/NAND inflation) were the soft spots.

每 TB 的营收同比增长速度加快至 28%（上一季度为 18%），管理层预计 12 月及之后的增长速度还会更高，因为产品价格基本保持稳定。他们认为，未来 3 到 4 个季度内，该公司的营收仍有望持续以这样的速度增长，这将带来 80% 的额外营收增长。不过，Exabytes 业务的同比增长率为 22%，连续两个季度低于 25%的目标；另外，由于 DRAM 和 NAND 芯片的价格上涨，每 TB 的成本仅下降了 4-5%，这些也是需要改进的方面。

Overall solid set of numbers, especially given positioning as stock is down 50%+ since June highs and 20%+ since Oct 1st Toshiba news coming in (one of the worst performing stocks in AI semis). Stock was flat initially AH but fell another ~5-6% after hours after mgmt said capex “modestly above” the 4-6% range next to talk of accelerating exabyte supply growth. Neither message was new, but both touched on the post-Toshiba supply nerves.

整体表现相当不错。考虑到该股票的股价自 6 月的高点以来已下跌 50%以上，而自 10 月 1 日东芝相关消息传出后更是下跌了 20%以上，这一表现其实已经相当不错了。该股在交易时段内价格基本持平，但在盘后则又下跌了 1001 点，跌幅约为 5-6%。管理层表示，公司的资本支出将“略高于”4-6%的水平，同时还会加快艾字节级存储产品的供应速度。这些消息其实并不新鲜，但它们都引发了市场对东芝事件之后供应状况的担忧。

Buyside numbers going up slightly morning and still sit around $60+ for CY‘28 vs street at $45 so trading at around 5x at sub $350. Bulls will like the accelerating rev % y/y and price increases to roll through the next 3 q’s with incrementals at 80%, which means still room for margins to keep rising. Bears will pushback on industry dynamics changing for the worse, mgmt’s comments on “pricing moderation” after 3-4 qs (although they walked that back on callbacks), and slower cost/TB declines.

今日上午，该股的买入价略有上升，2028 财年的股价仍在 60 美元左右，而市场预期则为 45 美元，因此其估值约为 5 倍，股价低于 350 美元。看多者看好该公司营收的同比增速会持续加快，且价格在接下来的三个季度里还将继续上涨，涨幅可达 80%，这意味着公司的利润率还有进一步提升的空间。而看空者则担心行业形势会恶化，管理层提到在 3 到 4 个季度后会“适度调整价格”，不过后来又收回了这一说法；此外，成本和吨价的下降速度也会变慢。

Despite stock selling off on capex comments, message was the same as Citi conference:

尽管有有关资本支出的负面消息导致股价下跌，但其传达的信息与花旗银行的会议内容一致：

The message has been walked up gradually all year:

- **Feb 3, Innovation Day:** reaffirmed 4–6%, said the tech roadmap wouldn't need a capex step-up, and noted spending had been running below the range.
- **Jun 3, Evercore:** said some years could land above or below the range.
- **Aug 5, FQ4 call:** flagged spending on heads, media and automation, but gave no number above the range.
- **Sep 9, Citi:** first explicit "slightly above for the next couple of years." It's the only transcript besides today's where I find it.
- **Today:** same message, now in the script.

On input costs, language was slightly more explicit than at Citi with only a 4-5% decline but kept 10% LT target alive

在成本方面，该行的表述比花旗更为明确：成本仅下降了 4-5%，同时仍保持着 10%的长期目标。

How the message evolved

- **Oct 30, 2025 (FQ1'26 call):** the framework was mid-to-high single-digit annual cost-per-TB declines.
- **Jan 29 (FQ2'26 call):** about 10% in the December quarter. Sennesael called ~10% a good number that could go higher if the roadmap accelerated. An analyst raised NAND inflation, but only to ask about pricing leverage.
- **Mar 3 (Morgan Stanley) / Apr 30 (FQ3'26 call):** about 10% again in the March quarter. Value engineering came up only as a general way to cut costs, with no warning about input costs.
- **Aug 5 (FQ4'26 call):** the decline slipped to about 8% in the June quarter. He explained it as normal quarter-to-quarter variation and reiterated the long-term ~10%. DRAM and NAND weren't mentioned.
- **Sep 9 (Citi):** the first explicit flag. He said the DRAM and NAND inside each drive "has become a lot more expensive" and that costs were rising across the supply chain. He also said being between two product transitions was slowing the declines, and that not every quarter would hit 10%.
- **Oct 22 (today):** Daryanani estimated the September-quarter decline at about 4–5%, and management didn't push back. Sennesael said near-term declines will be under 10%. He said the fixes are gaining traction but take time to implement and qualify, and the long-run ~10% target stands.

Key Takeaways

- **Pricing.** Blended $/TB rose 28% y/y and ~9% q/q (nearline +26% y/y, +8% q/q), up from ~18% in the June quarter and ~9% in March. Strength showed up in both nearline and client/consumer (client revenue more than doubled y/y). The drivers:

价格方面，混合存储的每 TB 价格同比上涨 28%，环比上涨 9%（近线存储的同比涨幅为 26%，环比涨幅为 8%）。这一数值高于 6 月时的 18%以及 3 月时的 9%。无论是近线存储还是面向客户/消费者的产品，其价格均呈现上升趋势，其中面向客户的业务收入同比增幅甚至超过了一倍。推动这一趋势的因素包括：

- contractual escalators as LTAs hit their anniversaries

  当长期协议到期时，便会触发合同规定的价格上调机制。

- expiring LTAs renewed at higher prices

  以更高价格续签的到期长期协议

- strong spot pricing on non-contracted exabytes

  非合同约定的艾字节数据量采用较高的定价。

- mix toward higher-capacity drives

  转向更高容量的驱动器

Dec-Q $/TB growth is guided above 28% (implied mid-to-high 30s%). HAMR will be priced at parity with ePMR per TB ("the price is the price"), so WDC won't be buying HAMR share with introductory discounts. Incremental: pricing is now running well above the high-teens framing the Street had treated as sustainable.

预计 12 月至明年第一季度，每 TB 的利润增长率将超过 28%（大概率在 30%左右）。HAMR 技术的产品定价将与 ePMR 技术相同，即"价格保持一致"；因此 WDC 不会以优惠价格购买 HAMR 技术的相关产品。从增长幅度来看，其定价已经远远高于市场此前认为可行的 15%左右的水平。

- **Margins.** GM of 58.1% (+1,420bps y/y, +370bps q/q) beat Street ~55.6% and the 55-56% guide, with >80% incremental GM both y/y and q/q. OM was 49.1% vs. Street 46.4% as opex fell to 8.9% of revenue. Mgmt laid out three durable GM drivers:

  毛利率方面，为 58.1%（同比上升 1,420 个基点，环比上升 370 个基点），这一数值高于市场预期的 1001#55.6%，也高于 55-56%的预期范围；无论是同比还是环比，毛利率的上升幅度都超过了 80%。运营利润率则为 49.1%，而市场预期为 46.4%，这是因为运营成本仅占营收的 8.9%。管理层提出了三个能够持续提升毛利率的因素。

  - pricing (escalators, renewals, spot)

定价（自动扶梯、续订、即期）

- up-mix to higher-capacity drives, which carry a higher ASP per drive

  升级到容量更大的驱动器，这样每个驱动器的平均销售价格也会更高。

- more exabytes through areal density without adding fixed unit cost

  在不增加单位固定成本的情况下，通过提高面积密度可处理更多艾字节的数据。

In callbacks, mgmt said HAMR margins should be at least comparable to ePMR once at volume.

在回复中，管理层表示，一旦实现大规模生产，HAMR 的利润率应至少能与 ePMR 相当。

- **Exabytes.** Shipments were 248 EB (+22% y/y, +7% q/q), with nearline at 223 EB (+22%, ~90% of EB). Both came in a touch below Street (~249-250 total, ~227 nearline). Growth was stuck at 22% for a second quarter, below the >25% LT target and well behind STX's mid-30s. Mgmt called Sept-Q "the floor." It expects growth to accelerate through FY27-28 as 40TB ePMR reaches ~30% of nearline bits in Dec-Q and ~50% in Mar-Q, followed by HAMR. Mgmt called 40TB ePMR the "fastest transition of any ePMR platform." The 50% target is unchanged from August; the 30% is new. Asked whether ~35% EB growth in six quarters is the message, the CFO said "you're thinking about it in the right direction." Bears will say if WDC grows supply ~35%, STX ~30% and Toshiba doubles capacity, industry supply could outrun demand and the 28%+ price increases could reverse. In callbacks, mgmt said 35% isn't guidance.

EB（艾字节）。出货量为 248 EB（同比+22%，环比+7%），其中近线为 223 EB（同比+22%，占 EB 的约 90%）。两者均略低于华尔街预期（总计约 249-250，近线约 227）。增速连续第二个季度停滞在 22%，低于 25%以上的长期目标，也远落后于 STX 的 30%中段水平。管理层称 9 月季度为“底部”。预计随着 40TB ePMR 在 12 月季度达到近线比特的约 30%、在 3 月季度达到约 50%，随后是 HAMR，增长将在 FY27-28 期间加速。管理层称 40TB ePMR 是“所有 ePMR 平台中最快的过渡”。50%的目标与 8 月相比没有变化；30%的目标是新的。当被问及~35%的 EB 在六个季度内增长是否是传达的信息时，CFO 表示“你的思考方向是对的”。空头会说，如果 WDC 将供应量增长~35%，STX 增长~30%，并且东芝将产能翻倍，行业供应可能会超过需求，28%以上的价格上涨可能会逆转。在回电中，管理层表示 35%不是指引。

The long-term target is still >25%; above 30% is possible but not guided, and the growth is meant to fill orders customers have already signaled.

长期目标仍为 25%以上；达到 30%也是可能的，但并无明确要求。这一增长速度旨在满足客户已经提出的订单需求。

- **Capex.** Capex roughly doubled q/q to $227M (5.2% of revenue vs. ~3% in FY26).

  资本支出方面，环比增长约一倍，达到 2.27 亿美元；该数值占营收的 5.2%，而 2026 财年这一比例为 1.001%至 3%。

  - **New wording:** the script now has capex “modestly above” the 4-6% range for the next two years, with the five-year average still 4-6%. In callbacks, mgmt said up to ~2pts above, i.e., ~7-8%, which is 3x+ FY26’s $418M in dollars.

    新的表述是：在未来两年里，资本支出将处于 4-6%的略高水平，而五年平均水平仍为 4-6%。管理层表示，实际数值可能会高出这个范围 1001#2 个百分点，也就是 1002#7-8%，这一数字是 2026 年 4.18 亿美元的三倍多。

  - **Where it goes:** head wafers (HAMR heads need more process steps and longer cycle times, which cuts throughput), media and glass substrates, and factory automation. It also covers more heads and media per drive as platter counts go from 11 to 12 and eventually 14. It is not for unit capacity: total platter counts are growing low-teens % y/y on minimal unit growth.

其应用领域包括磁头部件（HAMR 磁头需要更多的加工步骤，且生产周期更长，这会降低生产效率）、介质与玻璃基板，以及工厂自动化系统。随着盘片数量从 11 片增加到 12 片，最终达到 14 片，每个驱动器所使用的磁头和介质数量也会相应增加。这一技术并非用于提升单台设备的容量——尽管盘片总数以每年低两位数的速度增长，但单台设备的容量增长却十分缓慢。

- **Costs.** Cost/TB fell only ~4.5% y/y and was roughly flat q/q, vs. ~8% in June and ~10% in the Dec and Mar quarters. That is well short of the ~10% LT target. Mgmt blamed DRAM/NAND inflation inside the drives in a tight supply chain, plus being between product transitions. Value-engineering fixes are gaining traction but take several quarters to implement and qualify. Near-term declines will stay under 10%, with no timeline back to ~10%. Incremental: input costs were first flagged at the September conference, but this is the first time the slippage is this visible. This is where WDC's ~2-year HAMR lag vs. STX shows up in the P&L. Pricing is more than covering it for now.

成本。成本/TB 同比仅下降~4.5%，环比大致持平，而 6 月为~8%，12 月和 3 月季度为~10%。这远低于~10%的长期目标。管理层将其归咎于供应链紧张背景下硬盘内部的 DRAM/NAND 涨价，以及正处于产品过渡期。价值工程修复正在取得进展，但需要几个季度才能实施和认证。近期降幅将保持在 10%以下，且没有恢复~10%的时间表。增量信息：投入成本问题最早在 9 月会议上被提出，但这是首次如此明显地看到进展滞后。这正是 WDC 在 HAMR 方面落后 STX ~2 年的问题在损益表中的体现。目前定价足以覆盖这一影响。

- **Competition.** On Toshiba's capacity plans and chatter about industry consolidation, mgmt said long-term industry fundamentals haven't changed (25%+ demand CAGR, tight supply). It reiterated it will not add unit capacity. Mgmt argued the bottleneck is head and media capacity, not drive assembly. Players that rely on third-party heads and media may have to add units "just to maintain their share" and "will have a harder time" growing exabytes. WDC buys some external heads and media to benchmark its own, but only for lower-capacity drives; all leading-edge platforms use internal heads. That matters given reports of Toshiba's interest in TDK's HDD head business. If a competitor meaningfully adds units, WDC's response "is going to be the same": areal density, not units.

竞争。关于东芝的产能计划以及业内整合的传闻，管理层表示行业长期基本面没有改变（需求年复合增长率 25%以上，供应紧张）。它重申不会增加单位产能。管理层认为瓶颈在于磁头和介质产能，而非驱动器组装。依赖第三方磁头和介质的厂商可能不得不增加单位出货量“仅仅是为了维持份额”，并且“将更难”实现 EB 级容量增长。西部数据会采购一些外部磁头和介质用于对标自身产品，但仅用于低容量驱动器；所有前沿平台都使用内部磁头。鉴于有报道称东芝对 TDK 的 HDD 磁头业务感兴趣，这一点尤为重要。如果竞争对手大幅增加单位出货量，西部数据的回应“将是一样的”：靠面密度，而非单位出货量。

- **HAMR.** The roadmap: HAMR。发展路线图：
  - qualifications with two hyperscalers finish in CQ1’27

    在 2027 年的 CQ1 比赛中，拥有两位超大规模企业的支持作为优势条件

  - volume shipments start in 1H CY27

    批量发货将于 2027 年上半年开始。

  - two more customers begin qualification in 1H CY27

    在 2027 财年上半年，还有两名客户开始资格审核流程。

  - 2nd-gen HAMR (5TB/platter, ~55TB on 11 platters) begins qualification in 2H CY27

    第二代 HAMR 技术（每张盘片容量为 5TB，11 张盘片总容量可达 55TB）将于 2027 年下半年开始进行性能测试。

Mgmt says customers like its failure rates vs. what they’ve seen from other players. The “two hyperscalers” wording read as a step back from September, when mgmt said it was “in qualification with four large hyperscale customers” (see callback below). High-bandwidth drives are sampling with multiple customers for KV cache in AI inference and for video streaming. Mgmt is now working out how to price them, with impact from late CY27 into CY28.

管理层表示，客户们喜欢该产品的故障率，因为这一数值低于其他厂商的产品。所谓“两家超大规模客户”的说法，实际上意味着相比 9 月时的情况有所退步——当时管理层称自己“已与四家大型超大规模客户进行了接洽”（详见下文）。目前，这些高带宽硬盘正在被多家客户用于人工智能推理及视频流传输领域的键值缓存应用。管理层正在研究这类产品的定价策略，其影响将体现在 2027 年底到 2028 年期间。

- **Demand.** Mgmt says revenue is limited by supply, not demand. All of its top seven customers provide visibility through 2030-31, the demand signal is “increasing” quarter after quarter, and the supply-demand gap isn’t going away near term. Mgmt framed four demand legs:

需求方面。管理层认为，制约收入增长的因素是供应能力，而非需求。该公司的前七大客户的需求状况在 2030 年至 2031 年期间依然稳定，需求呈逐季上升趋势，而短期内供需缺口也不会消失。管理层将需求情况分为四个方面：

  - cloud, accelerating on video and AI-enabled services

    云计算，推动视频及人工智能相关服务的快速发展

  - training and RL 训练与强化学习
  - inference and agentic AI, with “tremendous” growth in logs, checkpoints and outputs

    推理与智能体人工智能领域，日志、检查点及输出数据量均呈现“惊人”的增长势头。

  - physical AI, led by AV customers in Asia and robotics

    由亚洲的视听设备客户及机器人领域引领的实体人工智能

  It argued softness in any one leg, including neoclouds, would be absorbed by the others. Incremental: in September mgmt said customers were asking to sign LTAs through 2030-31. Now it cites visibility through 2030-31 across all of its top seven customers.

该公司认为，即便某条业务线表现疲软，包括“新云”业务在内，其他业务线也能弥补这一缺口。此前，该公司表示有客户希望签订持续到 2030-2031 年的长期协议；现在则称，其前七大客户的所有业务在 2030-2031 年期间都保持稳定发展态势。

- **Customers.** Cloud was $3.9B (88% of revenue, +54% y/y, +16% q/q). Demand is

broadening to enterprise and hybrid-cloud OEMs, neoclouds and frontier AI labs, which mgmt is now building into its forecasts and investment plans. Mgmt is selective on neoclouds, favoring strong balance sheets and quality end customers. Per callbacks, it also structures agreements to limit credit risk.

客户方面，云业务带来的收入为 39 亿美元，占总收入的 88%，同比增长 54%，环比增长 16%。需求正在向企业客户、混合云服务提供商、新型云服务公司以及前沿人工智能实验室拓展，管理层已将这些因素纳入其预测与投资计划中。在考虑新型云服务项目时，管理层会谨慎选择那些拥有强劲财务状况且客户质量较高的企业。此外，还会通过相关协议来控制信用风险。

- **Cash.** FCF of $1.38B (31% margin) came in ~8% below Street (~$1.50B). Capex doubled and inventory rose ~18% q/q (+$270M), built in components rather than finished goods ahead of EB acceleration; mgmt says any extra exabytes would ship immediately. WDC returned $1.06B ($1.0B of buybacks, $56M of dividends) and raised the dividend 17% to $0.175.

现金。自由现金流为 13.8 亿美元（利润率 31%），比华尔街预期（约 15 亿美元）低 1001#8%。资本支出翻倍，库存环比上升 1002#18%（增加 2.7 亿美元），这是在 EB 加速之前建立的组件库存而非成品库存；管理层表示任何额外的艾字节都会立即发货。西部数据返还了 10.6 亿美元（其中 10 亿美元用于回购，5600 万美元用于分红），并将股息上调 17%至 0.175 美元。

- **Callback.** The most important takeaway: Dec-Q is largely de-risked. The vast majority of the quarter's revenue is already under contract with pricing locked, and $/TB growth will exceed 28% y/y. Mgmt also walked back the scarier readings of the call:

总结来说，最关键的一点是：12 月季度的风险已经大大降低。该季度的大部分收入都有合同保障，价格也已确定；此外，每 TB 的营收增长率将超过 28%。管理层还修正了之前那些过于悲观的预测数值。

  - ~35% EB growth is not guidance; >25% remains the LT target, and >30% is possible but not guided. Supply growth is aimed at existing customer demand, not excess capacity.

~35% 的 EB 增长幅度并非具体目标；长期目标仍是超过 25%，而超过 30%也是有可能的，但并未被设定为明确目标。产能的增长是为了满足现有客户的需求，而非为了创造过剩产能。

  - Four hyperscalers remain in HAMR qualification (two finishing first, with two

new customers to follow), so there is no pushout.

目前仍有四家超大型企业处于 HAMR 认证流程中（其中两家已率先完成认证，还有两家客户正在办理中），因此没有企业会被淘汰。

- The 3-4 quarter pricing comment refers to y/y growth continuing to accelerate, with no set timeline for moderation.

关于第三、第四季度的定价展望表明，同比增速将持续加快，且目前尚无增速放缓的时间表。

The less comforting detail: LTAs mix fixed pricing, premium pricing on incremental volume and annual escalators. But commercial terms for the 2030-31 visibility years are not finalized, and purchase orders run only ~4-5 quarters out.

不太令人安心的是：长期协议中包含了固定价格、按增量收费的溢价机制，以及年度价格上调条款。不过，2030-2031 年的商业条款尚未确定，而且采购订单也只在 1001#4-5 个季度后才会下达。

Bull vs. Bear Debate 牛市与熊市之争

Bulls this is an AI supercycle and Supply is limited by heads and media, not assembly lines. The two vertically integrated leaders (WDC and STX, ~90% share) are growing exabytes through areal density rather than units. The new pricing is being written into LTAs with escalators and renewals, and customers now plan storage five-plus years out alongside land, power and compute. Bulls argue this looks like a planned, multi-year infrastructure buildout, not the PC-driven cycles that earned HDDs single-digit multiples. They see Toshiba's capacity ambitions as a prove-it story, given its reliance on third-party heads and media and its history of missed roadmap milestones.

多头们，这是一轮 AI 超级周期，而供应受限于磁头和介质，而非装配线。两家垂直整合的领导者（WDC 和 STX，~90%份额）正通过面密度而非单位数量来增长 EB 级容量。新的定价正被写入带有递增条款和续约条款的长期协议中，客户如今在规划土地、电力和算力的同时，也一并规划五年以上的存储需求。多头认为，这看起来像是一场有计划的、持续多年的基础设施扩建，而非那种曾让 HDD 获得个位数市盈率的 PC 驱动周期。他们认为，鉴于东芝依赖第三方磁头和介质，且历来在路线图里程碑上屡屡落空，其产能雄心更像是一个"有待证明"的故事。

This quarter fed every leg of that argument. Pricing accelerated to +28% with Dec-Q higher and largely locked, and mgmt sees 3-4 more quarters of expanding y/y gains. Pre-print Street CY27 models embedded only ~13-16% average $/TB growth. Every

5pts of CY27 pricing is worth roughly $1B of revenue that falls almost entirely to profit, or ~$2 of EPS.

本季度为这一观点提供了有力支撑：产品价格涨幅上升至 28%，12 月及之后的价格则基本保持稳定。管理层预计，未来还有 3 到 4 个季度的同比增长空间。在发布相关数据之前，市场预计 2027 年的平均价格增幅仅为 1001#13-16%/TB。每上升 5 个百分点，就能带来约 10 亿美元的营收，而这些营收几乎全部会转化为利润，相当于每股收益增加 2 美元。

GM is guided to 60.5%, and bulls see the mid-to-high 60s by CY28. 40TB ePMR and HAMR (priced at parity, with margins at least equal to ePMR) should lift EB growth from the 22% “floor” toward 30% while the industry adds no units. Opex is essentially fixed at ~$400M a quarter, so OM can head toward 60%. With 35-45% FCF margins and 85%+ returned, WDC would retire ~4-6% of its share count a year at today’s price. Bulls read the capex step-up as old news aimed at the real bottleneck (heads and media). Catalysts include STX’s upcoming print, HAMR qualification completions in CQ1’27, the Dec-Q pricing print and LTA renewals.

通用汽车被引导至 60.5%，多头预计到 CY28 将达到 60%中高水平。40TB ePMR 和 HAMR（定价持平，利润率至少与 ePMR 相当）应能将 EB 增长从 22%的“下限”提升至 30%，而行业不会增加单位出货量。运营支出基本固定为每季度约 4 亿美元，因此运营利润率可望迈向 60%。凭借 35-45%的自由现金流利润率以及 85%以上的返还比例，西部数据按当前价格每年将注销其股份总数的 4-6%。多头将资本开支的增加解读为旧闻，其针对的是真正的瓶颈（磁头和介质）。催化剂包括希捷即将发布的财报、CQ1'27 完成的 HAMR 认证、12 月季度定价报告以及长期协议续签。

Bears see a classic commodity up-cycle dressed up as secular growth. $/TB is up 28% and heading toward the mid-30s in an industry where it historically fell 15-20% a year, and pricing like that invites a supply response:

熊市人士认为，这其实是一种典型的商品周期性上涨现象，只不过被包装成了长期增长的趋势。在该行业中，价格通常每年会下降 15-20%，但如今价格却上升了 28%，甚至有望突破 30 美元/TB 的大关。这样的价格走势必然会引发供应方面的反应。

- Toshiba reportedly plans to double capacity, and has reportedly shown interest in TDK’s HDD head business, which would ease its component bottleneck.

  据报道，东芝计划将产能提高一倍，并对 TDK 的 HDD 磁头业务表现出兴趣，这有助于缓解其零部件供应方面的瓶颈问题。

- STX is already growing EBs in the mid-30s on HAMR.

  STX 已经在使用 HAMR 技术，将 EBs 的产量提升至 30 多。

- WDC itself is more than tripling capex and talking up accelerating EB supply growth toward 30%.

  WDC 本身将把资本支出增加两倍以上，并致力于加快 EB 的供应增长速度，目标使其达到 30%。

An exabyte from areal density is still an exabyte. If industry supply grows in the high 30s while demand compounds at the ~25%+ mgmt keeps citing, the shortage closes sometime in 2028. The LTAs bulls lean on won't stop it. Mgmt conceded that the further out you go, the less volume and pricing is covered; out-year terms aren't set, and purchase orders run only 4-5 quarters. The incremental demand supporting spot pricing comes from neoclouds and frontier labs, the part of the AI stack most exposed to the financing stress now hitting the complex. Hyperscale customers (cloud is 88% of revenue) have every incentive to second-source and push back at renewals once supply loosens.

来自面密度的艾字节终究还是艾字节。如果行业供给以接近 40%的速度增长，而需求以管理层反复引用的~25%以上的速度复合增长，那么短缺会在 2028 年某个时候消失。多头所依赖的长期协议挡不住这一点。管理层承认，时间越往后，被覆盖的量和价格就越少；远期的条款尚未确定，采购订单只覆盖 4 到 5 个季度。支撑现货价格的增量需求来自新云和前沿实验室，而这正是 AI 技术栈中受当前冲击整个板块的融资压力影响最大的部分。超大规模客户（云业务占营收的 88%）有充分动机引入第二供应源，并在供应一旦松动时在续约时压价。

The bull case assumes pricing stays strong after supply responds and that WDC closes its technology gap. This quarter cut against both:

乐观预期认为，随着供应状况得到改善，产品价格仍将保持强劲，同时 WDC 也能缩小其技术差距。但本季度的业绩却与这两点都相悖。

- EB growth was stuck at 22% for a second quarter.

  第二季度，EB 的增长率一直停滞在 22%。

- Cost/TB declines slowed to ~4-5% as the ~2-year HAMR lag vs. STX shows up in the P&L.

由于 ~2 年的 HAMR 技术进展落后于 STX，这一因素已体现在利润表中，因此成本/TB 的下降速度放缓至 1001#4-5%。

- HAMR volume still depends on qualifications that don’t finish until CQ1’27.

HAMR 的产量仍取决于那些要到 2027 年第一季度才会确定的各项条件。

- The promised acceleration means running two transitions at once while absorbing HAMR head throughput losses.

所承诺的加速方式意味着同时进行两次转换，同时弥补 HAMR 磁头在吞吐量方面的损失。

Mgmt’s own comment that pricing growth will “eventually slow down” after 3-4 quarters puts the second-derivative peak on the calendar for 2H CY27 although mgmt seemed to walk back the moderation comment in the call back.

管理层自己表示，价格增长在 3 到 4 个季度后“最终会放缓”，因此 2027 年下半年的价格峰值应该会出现。不过在后续的沟通中，管理层似乎又收回了这一关于价格增长会放缓的言论。

BE -4%: Third Beat-and-Raise Clears the Buyside Bar withs some pushback around the unchanged 34% GM guide

BE -4%：第三次加仓操作成功突破了买入门槛，不过对于 34%的毛利率预期则仍存在一些反对意见。

Overall, a very solid set of numbers. Q3 revenue $1.24B (+138% y/y) vs. Street $1.08B; non-GAAP EPS $0.94 vs. Street $0.68; FY26 revenue guide raised ~11% at the midpoint to $4.4–4.6B vs. Street $4.12B and a buyside bar of a ~7.5% raise; FCF -$181M.

总体而言，这是一组非常扎实的数据。第三季度营收 12.4 亿美元（同比 +138%），高于市场预期的 10.8 亿美元；非 GAAP 每股收益 0.94 美元，高于市场预期的 0.68 美元；2026 财年营收指引中点上调约 11%，至 44 亿至 46 亿美元，而市场预期为 41.2 亿美元，买方预期门槛为上调约 7.5%；自由现金流为-1.81 亿美元。

It was BE’s first $1B+ product quarter (+179% y/y), and product GM rose 120bps q/q to

38.4% despite ramp and expediting costs. Opex grew only 26% y/y, which pushed op margin to 23.1% and the FY op income guide up 17%. Leading indicators improved: backlog is still outgrowing revenue, product/installation RPO rose 49% q/q, ~$2.6B of supplier commitments fall due in 2027, and a second Fremont site is being added as mgmt prepares for capacity beyond 5GW. Top-customer concentration fell to ~43% from ~73%. The nits were OCF of -$27M on a ~$430M contract-asset build, no reiteration of the >$375M OCF guide, and an unchanged ~34% GM guide.

这是 BE 首个产品收入超过 10 亿美元的季度（同比增长 179%），尽管有产能爬坡和加急成本，产品毛利率仍环比上升 120 个基点至 38.4%。运营支出同比仅增长 26%，推动运营利润率达到 23.1%，全年运营利润指引上调 17%。领先指标改善：积压订单增速仍高于收入，产品/安装 RPO 环比增长 49%，~26 亿美元的供应商承诺将于 2027 年到期，随着管理层为超过 5GW 的产能做准备，第二个弗里蒙特基地正在增设。最大客户集中度从~73%降至~43%。小瑕疵是：经营现金流为-2700 万美元，用于~4.3 亿美元的合同资产建设，未重申超过 3.75 亿美元的经营现金流指引，毛利率指引维持在~34%不变。

Key Takeaways

- **Guide.** The third raise of the year cleared the buyside bar. Revenue rose ~11% at the midpoint vs. hopes for ~7.5%, the range narrowed to $200M, and op income and EPS were raised 17% and 20%. Mgmt built it the same way as prior raises: backlog assessed customer by customer against site readiness, plus a probability-weighted pipeline. It said a small number of year-end deliveries will decide where in the range BE lands. The implied Q4 midpoint (~$1.45B) sits ~18% above Street. The year started at ~60% growth, ~32% GM and ~14% op margin; the guide now ~122%, ~34% and ~22%, respectively.

  指引。年内第三次上调指引，超过了买方预期。营收中点增长~11%，而市场预期为~7.5%，区间收窄至 2 亿美元，营业利润和每股收益分别上调 17%和 20%。管理层构建此次上调的方式与之前几次相同：逐客户根据现场准备情况评估积压订单，再加上概率加权的项目储备。公司表示，少数年末交付将决定 BE 落在区间的哪个位置。隐含的第四季度中点（约 14.5 亿美元）比华尔街预期高~18%。年初时增长为~60%、毛利率~32%、营业利润率~14%；如今指引分别为~122%、~34%和~22%。

- **Demand.** Mgmt reiterated that backlog is growing faster than revenue but declined to bracket it; the YE figure comes with Q4 in February. The harder datapoints were product and installation RPO (+49% q/q) and ~$5.8B of new supplier commitments, some take-or-pay, with ~$2.6B due in 2027. That reads as BE locking in supply for a much larger 2027.

需求方面，管理层表示积压的订单增长速度超过了营收增长速度，但并未给出具体数字；全年的数据将在 2 月随着第四季度数据的公布而确定。比较棘手的指标包括产品和安装相关的等待时间（环比上升 49%），以及来自新供应商的承诺额——总计 58 亿美元，其中 26 亿美元的款项需要在 2027 年支付。这表明，BE 公司正在为 2027 年争取更多的供应保障。

- **Capacity.** BE added a ~158k sq ft Fremont site on a 12.5-year lease, roughly the size of its existing ~164k sq ft cell footprint. It will be built out in parallel with current plants, a path toward ~10GW over time. Q3 capex jumped to $153M from $52M in 2Q (YTD $231M, ~4x FY25), mostly machinery for Fremont and Newark. At ~$150–200M per GW, that's ~1GW added, putting operational capacity at ~2–2.5GW. Labor isn't the constraint: mgmt said the stack line runs with the same ~600 people at 5GW as at 1GW.

产能。BE 在弗里蒙特新增了一个~15.8 万平方英尺的厂址，租期 12.5 年，规模大致相当于其现有~16.4 万平方英尺电芯产能占地。它将与现有工厂并行建设，逐步迈向~10GW。第三季度资本支出从第二季度的 5200 万美元跃升至 1.53 亿美元（年初至今 2.31 亿美元，~为 2025 财年的 4 倍），主要用于弗里蒙特和纽瓦克的机械设备。按每 GW~1.5 亿至 2 亿美元计算，这相当于新增~1GW，使运营产能达到~2 至 2.5GW。劳动力并非制约因素：管理层表示，电堆产线在 5GW 和 1GW 时都只需同样的~600 人。

- **Margins.** Product GM's 120bps q/q gain came in a quarter with new-line ramps and expedited deliveries, which mgmt credited to pricing and cost-downs. Service GM slipped 60bps q/q but held above 20% for a second straight quarter. The disappointment: after climbing from ~32% earlier in the year, the ~34% FY GM guide was held despite the ~$450M revenue raise, implying flat Q4 GM. The CFO cited expediting and startup costs and said engineering, sourcing and manufacturing cost programs take time to reach COGS. He called the outlook "measured," which makes GM expansion a 2027 story. Opex leverage did the heavy lifting: Q3 op income alone exceeded all of FY25.

利润率。产品毛利率环比提升 120 个基点，而该季度正值新产线爬坡和加急交付，管理层将这一改善归功于定价和降本。服务毛利率环比下滑 60 个基点，但连续第二个季度保持在 20%以上。令人失望的是：在年初从~32%攀升后，尽管营收上调~$450M，~34%的全年毛利率指引仍维持不变，意味着第四季度毛利率持平。首席财务官提到加急和启动成本，并表示工程、采购和制造成本计划需要时间才能体现在销货成本中。他称这一展望"审慎"，这使得毛利率扩张成为 2027 年的故事。运营费用杠杆发挥了主要作用：仅第三季度运营利润就超过了整个 25 财年。

- **Pricing.** Mgmt said pricing “remains strong,” and math supports it. If the largest customer is Nebius’ ~328MW NJ project, as some assume, ~$1.31B of 2Q–3Q revenue implies ~$4,000/kW vs. ~$3,000/kW previously assumed, with customers absorbing expediting costs for speed. Others still model roughly flat ASPs near ~$3,300/kW. K.R. leaned on NVDA’s framing that a one-quarter delay on a 1GW data center costs ~$10B of revenue (~$1B per 100MW), and cited Oracle Utah powered in under two months.

  定价。管理层表示定价“依然强劲”，而数据也支持这一点。如果最大客户是 Nebius 位于新泽西的~328MW 项目，正如一些人假设的那样，那么~第二至第三季度 13.1 亿美元的收入意味着~每千瓦 4,000 美元，而此前假设为~每千瓦 3,000 美元，客户为追求速度而承担加急成本。其他人仍模型测算平均售价大致持平，接近~每千瓦 3,300 美元。K.R.援引英伟达的说法，即 1GW 数据中心延迟一个季度会损失~100 亿美元收入（约每 100MW 损失 10 亿美元），并提到 Oracle 犹他州项目在不到两个月内通电。

- **Customers.** Concentration improved, with the largest customer at ~43% of revenue vs. ~73% in 2Q. But a related-party customer was another ~26%, so the top two were still ~69%. On Nebius, K.R. said BE won’t be the bottleneck on any of the ~300MW and was ready for the first block, which the customer is only now close to energizing. That is a reminder that deliveries, and revenue, can run ahead of block-by-block site readiness. New fronts: the US Army conditionally awarded partner Indelible long-term leases to build and operate BE-powered generation on Army installations. BE also shipped its first units into Texas, which mgmt pitched as proof it now competes even in the lowest-cost power markets.

  客户。集中度有所改善，最大客户占收入的~43%，而第二季度为~73%。但一家关联方客户又占了~26%，因此前两大客户合计仍占~69%。关于 Nebius，K.R.表示 BE 不会成为~300MW 任何部分的瓶颈，并已为第一个区块做好准备，而客户目前才接近通电。这提醒我们，交付和收入可能先于逐个区块的现场就绪进度。新战线：美国陆军有条件地将长期租约授予合作伙伴 Indelible，用于在陆军设施上建设并运营 BE 供电的发电设施。BE 还首次向德克萨斯州发货，管理层称这证明其如今即使在成本最低的电力市场也具备竞争力。

- **New Markets.** K.R. expects “significant wins” in utility front-of-the-meter deals. He pitched BE servers as rate-baseable distribution assets that let utilities serve load growth rather than lose customers to behind-the-meter; Ameren Missouri’s IRP already includes ~500MW of gas fuel cells by 2030. Internationally, BE is talking with local partners in Asia and Europe and flagged news “soon,” with

higher gas prices abroad widening its efficiency edge. AEP disclosed 700MW of CCS-enabled BE servers for a Google project in Wyoming, the first commercial CCS proof point. On 800V DC, BE is in talks with all the hyperscalers and claims >$5B of savings over five years for a 1GW site, with timing set by when 800V racks ship.

新市场。K.R.预计在公用事业表前交易中取得“重大胜利”。他将 BE 服务器推介为可纳入费率基数的配电资产，使公用事业能够满足负荷增长，而不是将客户流失到表后；Ameren Missouri 的 IRP 已纳入到 2030 年约 1001#500MW 的天然气燃料电池。在国际上，BE 正在与亚洲和欧洲的本地合作伙伴洽谈，并预告“很快”会有消息，同时海外更高的天然气价格扩大了其效率优势。AEP 披露了为怀俄明州一个谷歌项目提供的 700MW 支持 CCS 的 BE 服务器，这是首个商业化 CCS 验证点。在 800V 直流方面，BE 正在与所有超大规模云服务商洽谈，并声称对于一个 1GW 站点，五年内可节省超过 50 亿美元，时间安排取决于 800V 机架何时出货。

- **Cash.** OCF swung to -$27M (2Q: +$226M) on a ~$353M working-capital use. Contract assets rose ~$430M (product revenue recognized ahead of billing milestones), inventory ~$170M and receivables ~$175M. That was partly offset by ~$310M of higher deferred revenue/customer deposits and higher payables. With $153M of capex, FCF was -$181M (YTD +$42M). The prior FY OCF guide of >$375M was not reiterated (YTD ~$273M; Street had ~$460–580M). Cash ended at $2.5B, roughly matching recourse debt.

现金。经营性现金流骤降至-2700 万美元（第二季度：+2.26 亿美元），主要由于 3.53 亿美元的营运资金占用。合同资产增加 4.3 亿美元（产品收入在开票里程碑之前确认），存货增加 1.7 亿美元，应收账款增加 1.75 亿美元。这部分被递延收入/客户存款增加 3.1 亿美元及应付账款增加所抵消。资本支出 1.53 亿美元，自由现金流为-1.81 亿美元（年初至今+4200 万美元）。此前全年经营性现金流指引超过 3.75 亿美元未获重申（年初至今 2.73 亿美元；华尔街预期为 4.6 亿至 5.8 亿美元）。期末现金为 25 亿美元，与追索权债务大致相当。

- **New Mexico.** Mgmt didn’t address Oracle’s Project Jupiter, where the Street maps ~2.45GW of BE backlog and ~$2B of first-phase product revenue. The process is moving again after months of permitting delays. Technical filings are due Nov 17 and the public hearing starts Dec 7. The Street sees the air permit landing between mid-February and mid-April 2027 (excluding appeals), with gas pipeline approval also expected in 1Q27. It stays a 2027 revenue driver, but the hearing is contested and a final order could tighten the proposed MW cap.

新墨西哥州。管理层没有谈及甲骨文的 Project Jupiter，而华尔街预计该项目有 1001 号机组 2.45GW 的 BE 积压订单，以及 1002 号机组 20 亿美元的第一阶段产品收入。在经历了数月的许可延迟后，流程再次推进。技术文件提交截止日期为 11 月 17 日，公开听证会于 12 月 7 日开始。华尔街预计空气许可将在 2027 年 2 月中旬至 4 月中旬之间落地（不包括上诉），天然气管道批准也预计在 2027 年第一季度。它仍是 2027 年的收入驱动力，但听证会存在争议，最终命令可能会收紧拟议的 MW 上限。

Bull vs. Bear Debate 牛市与熊市之争

The big picture bull thesis is that the grid can't serve concentrated AI load on any useful timeline, and BE has become the default way to bring your own power. Interconnection queues and utility build-outs take years, and large gas turbines are sold out deep into the decade. BE energizes in months, block by block, with a non-combustion system that permits more easily. It uses almost no water: per mgmt, ~1.4M gallons vs. ~25B for a wet-cooled CCGT over the life of a 1GW site. It is also gaining political cover; Virginia's governor singled out fuel cells in the state's 2026 energy plan.

宏观多头逻辑是：电网无法在任何有用的时间表内为集中的 AI 负载供电，而 BE 已成为自带电源的默认方案。并网排队和公用事业建设需要数年时间，大型燃气轮机已售罄至本十年末。BE 可在数月内逐块通电，采用非燃烧系统，许可更容易。它几乎不耗水：据管理层称，在 1GW 站点生命周期内，耗水量为 ~140 万加仑，而湿冷联合循环燃气轮机为~250 亿加仑。它还在获得政治掩护；弗吉尼亚州州长在该州 2026 年能源计划中点名提到了燃料电池。

When a quarter of delay costs ~$1B of revenue per 100MW, speed is worth far more than the electrons, so BE can price at a premium and still win. Mgmt also argues the metric that matters is power cost per token, not LCOE, and that reliability, power quality and load-following tilt total cost further its way. BE is the only at-scale SOFC producer. Beyond hyperscalers, bulls see the TAM broadening into C&I, utilities, the military and international, with CCS, CHP and 800V DC as options on the same platform.

当四分之一年的延迟每 100MW 就会造成~$1B 的收入损失时，速度的价值远超电子本身，因此 BE 可以定高价仍能胜出。管理层还认为，真正重要的指标是每 token 的电力成本，而非 LCOE，并且可靠性、电能质量和负荷跟随进一步使总成本向有利于自己的方向倾斜。BE 是唯一具备规模化 SOFC 生产能力的企业。除超大规模云厂商外，看多者认为 TAM 正扩展至工商业、公用事业、军事和国际市场，而 CCS、CHP 和 800V 直流则是同一平台上的可选扩展。

This quarter checked most of the bull boxes. The raise beat the buyside bar, product GM expanded through a ramp, and opex grew at less than a fifth of revenue's pace. The forward indicators argue 2027 is a step up: RPO +49% q/q, ~$2.6B of 2027 supplier commitments, ~$310M of higher deferred revenue/deposits, a second Fremont site and backlog outgrowing revenue. Concentration fell, and the AEP-Google CCS project shows BE can win hyperscaler business on more than speed.

本季度在多数看涨指标上都打了勾。营收超预期，越过买方预期门槛；产品毛利率在产能爬坡中实现扩张；运营支出增速不到营收增速的五分之一。前瞻性指标表明 2027 年将更上一层楼：RPO 环比增长 49%，2027 年供应商承诺达 26 亿美元，递延收入/存款增加 3.1 亿美元，第二个弗里蒙特基地落地，积压订单增速超过营收。客户集中度下降，AEP-Google 的 CCS 项目表明 BE 不仅能靠速度，还能以更多优势赢得超大规模客户的业务。

The implied Q4 run-rate alone (~$5.8B annualized) is ~85% of pre-print Street FY27 revenue. That is before New Mexico, Wyoming or any new utility or international wins. Mgmt also pointed last quarter to 30–40GW of new AI data-center capacity coming online in 2027. Bulls therefore see February's FY27 guide and first backlog number since YE25 as the next estimate catalyst. Layer on GM expansion as expediting and startup costs roll off, and capacity that costs ~$150–200M per GW against ~$3B+ of annual revenue per GW (mgmt says new capacity pays back in months). On those numbers BE can self-fund 50%+ growth at 25%+ op margins, which is what would drive estimates and the multiple higher.

仅隐含的第四季度运行率（约合年化 58 亿美元）就已是财报发布前华尔街对 2027 财年营收预期的约 85%。这还未计入新墨西哥州、怀俄明州，或任何新的公用事业或国际订单。管理层在上季度还指出，2027 年将有 30–40GW 的新 AI 数据中心容量上线。因此，看多方将 2 月的 2027 财年指引以及自 2025 年底以来的首个积压订单数据视为下一个预估催化剂。再加上随着加急费用和启动成本逐步消退而带来的毛利率扩张，以及每 GW 成本约 1.5–2 亿美元、而每 GW 年营收超过 30 亿美元（管理层称新产能几个月即可回本）的产能。按这些数字，BE 可以以 25%以上的营业利润率自筹资金实现 50%以上的增长，而这正是推动预估和估值倍数走高的因素。

The broader bear thesis is that the market is capitalizing a scarcity year as a steady state. BE's growth and pricing reflect an acute shortage of interconnection and turbine slots. As utilities, turbine OEMs, recip and battery suppliers and new SOFC entrants add supply, the speed premium (~$4,000/kW implied on the largest deal) should compress toward ~$3,000/kW or below, just as BE roughly doubles its footprint.

更宏观的悲观观点认为，市场是将这种供应短缺的状况视为一种常态。BE 公司的业务发展及产品定价都反映出互联设施和风力发电机安装位极度匮乏的现状。随着电力公司、风力发电机制造商、相关零部件供应商以及新进入 SOFC 领域的企业不断增加供应，目前较高的价格水平（最大规模交易中的价格约为 4,000 美元/千瓦）应该会下降到 1,000 至 3,000 美元/千瓦左右，而与此同时，BE 公司的业务规模则可能会翻一番。更多一手研报请加微信：FCCNN88

The model is lumpy and concentrated. The top two customers were ~69% of Q3 revenue. Some estimate a single financing partner, Brookfield (whose financing commitment was expanded by $20B last quarter), could be more than half of FY26 revenue. Mgmt itself says a handful of year-end deliveries decide where FY26 lands. Bears see a project/hardware business priced like a platform. Revenue is recognized at delivery while billing follows milestones, so fast growth consumes working capital. Much of 2027 also depends on things BE doesn't control: a contested permit in New Mexico, CO2 infrastructure for Wyoming CCS, and customers' block-by-block site readiness. Add input risks (scandium and other rare earths with China exposure, customer gas-price sensitivity, ITC/safe-harbor policy) and a crowded, high-beta stock at ~45x Street CY27 EPS.

该模型结构松散且高度集中。前两大客户约占第三季度收入的~69%。有人估计，单一融资伙伴 Brookfield（其上季度融资承诺扩大了 200 亿美元）可能占 FY26 收入的过半。管理层自己也表示，年底的少数几笔交付将决定 FY26 的最终落点。看空者认为，这是一项按平台估值定价的项目/硬件业务。收入在交付时确认，而账单则按里程碑推进，因此快速增长会消耗营运资本。2027 年的很大一部分还取决于 BE 无法控制的因素：新墨西哥州一项有争议的许可、怀俄明州 CCS 所需的 CO2 基础设施，以及客户逐块推进的场地准备情况。再加上投入端风险（钪及其他与中国相关的稀土、客户对气价的敏感度、ITC/安全港政策），以及一只拥挤、高贝塔的股票，其估值高达华尔街 CY27 每股收益的~45 倍。

This quarter gave bears ammunition: FCF swung to -$181M on the contract-asset build, the OCF guide wasn't reiterated, and the CFO signaled contract assets may keep growing. Paired with K.R.'s comment that Nebius is only now energizing its first block, bears argue reported revenue is running ahead of customer readiness and cash. The GM guide stayed at ~34% despite a ~$450M revenue raise, pushing the margin story to 2027. Service revenue missed and was flat q/q, and implied Q4 growth decelerates to ~86% y/y from 138%.

本季度给了空头弹药：由于合同资产增加，自由现金流骤降至-1.81 亿美元，经营现金流指引未重申，首席财务官暗示合同资产可能继续增长。结合 K.R.的评论，即 Nebius 现在才刚启动其第一个区块，空头认为报告收入跑在了客户准备度和现金前面。尽管收入上调了 4.5 亿美元，毛利率指引仍维持在 34%，将利润率故事推迟到 2027 年。服务收入未达预期且环比持平，隐含的第四季度同比增速从 138%放缓至 86%。

VRSN: Record Domain Registrations and Higher FY26 Growth Outlook, Though Profitability Misses on One-Time Charge

VRSN：域名注册量创纪录，2026 财年增长前景乐观，但因一次性费用影响盈利未达预期

VRSN delivered another strong quarter of domain growth, with record new registrations of 13.1M (+24% y/y) and the .com/.net base accelerating to +6.1% y/y, driven by AI-enabled website creation, registrar marketing programs, and strength in the U.S. and EMEA. FY26 domain growth guidance was raised materially to +6.5–7.0%. Renewal rates moderated to 74.3%, largely reflecting a higher mix of first-time

renewals (~mid-40% retention vs. mid-80% for seasoned domains), a headwind likely to persist into 2027. The ~7% .com price increase takes effect November 1, while .web launches its initial registration phases in December/January ahead of broader availability in April 2027; the new Verisign Informed security service targets 1H27. Revenue beat modestly, but EPS and operating income missed due partly to a $7.5M asset-related charge.

VRSN 又实现了一个强劲的域名增长季度，新注册量创下 1310 万的纪录（同比+24%），.com/.net 基础域名加速至同比+6.1%，这得益于 AI 驱动的网站创建、注册商营销计划以及美国和 EMEA 地区的强劲表现。FY26 域名增长指引大幅上调至+6.5–7.0%。续费率降至 74.3%，主要反映出首次续费占比上升（首次续费留存率约 40%多，而成熟域名约为 80%多），这一不利因素可能持续到 2027 年。~7%的.com 涨价将于 11 月 1 日生效，而.该网站将于 2027 年 12 月或 1 月启动初步注册流程，全面开放服务则定于 2027 年 4 月。新的 Verisign Informed 安全服务预计将在 2027 年上半年推出。虽然营收略有增长，但由于 750 万美元的资产相关费用，每股收益和营业利润未能达到预期。

RNG: Biggest Revenue Beat Since 2022 as AI Adoption Accelerates, Margins Hit Records and FY26 Guide Raised

RNG：随着人工智能应用的加速推广，其营收创下 2022 年以来的最高水平，利润率也达到历史最佳水平；同时，该公司还上调了 2026 财年的业绩预期。

RNG delivered a strong beat and raise, with subscription growth accelerating to +6.0% y/y and record profitability supported by resilient core demand, AI cross-selling, and operating leverage. Customers purchasing at least one paid AI product now account for ~15% of ARR (>$400M of customer-cohort ARR, doubling y/y), with higher ARPU and >100% net retention; AIR reached 22.2K customers (+280% y/y), ACE 6.9K (+60%), and CEB 14.3K (+45% q/q), with ~two-thirds of CEB customers also buying AI. Roughly half of new customers now adopt AI products, while enterprise renewal headwinds have yet to fully ease, providing potential incremental upside into 2027. Gross debt fell below $1B ahead of schedule, FCF grew 21%, and management raised FY26 revenue guidance by $13M, exceeding the quarterly beat. AI-specific revenue remains relatively small, leaving meaningful monetization runway.

RNG 实现了强劲的超预期并上调指引，订阅增长加速至同比+6.0%，创纪录的盈利能力得益于富有韧性的核心需求、AI 交叉销售和经营杠杆。购买至少一款付费 AI 产品的客户现在占 ARR 的~15%（客户群 ARR 超过 4 亿美元，同比翻倍），ARPU 更高且净留存率超过 100%；AIR 达到 2.22 万客户（同比+280%），ACE 6900（+60%），CEB 1.43 万（环比+45%），其中~三分之二的 CEB 客户也购买了 AI。目前，大约有一半的新客户开始使用人工智能产品；不过企业续订业务方面仍面临诸多挑战，这些因素有望在 2027 年带来额外的增长空间。公司的总债务已提前降至 10 亿美元以下，自由现金流增长了 21%；管理层还将 2026 财年的营收预期上调了 1300 万美元，这一数值超过了季度预期的水平。与人工智能相关的业务所产生的收入目前还相对较少，因此该领域仍有很大的盈利潜力。

TECH NEWS/RESEARCH 科技新闻/研究

OpenAI: $30B funding round nears at reduced $1.25T valuation – CNBC / FT

OpenAI：融资轮即将启动，估值降至 1.25 万亿美元——CNBC/FT 报道

CNBC reports OpenAI is nearing a raise of up to $30B at a $1.25T pre-money valuation, led by UAE investors and Coatue. The FT reports the target was reduced from $1.4T after investor resistance, with commitments sought by October 30. The financing would bridge OpenAI to a potential 2027 IPO.

CNBC 报道称，OpenAI 即将获得高达 300 亿美元的融资，其估值为 1.25 万亿美元；这些资金将由阿联酋的投资者以及 Coatue 牵头提供。而《金融时报》则称，由于投资者提出反对，该公司的估值已从 1.4 万亿美元下调，目前需要在 10 月 30 日之前争取到所需的资金。这些资金将帮助 OpenAI 为 2027 年的 IPO 做好准备。

SPCX: Phillip upgrades to Buy/$250 as compute demand outruns supply and pricing improves

SPCX：菲利普将该股评级上调至“买入”，目标价定为 250 美元，原因是计算需求超过供应，且价格正在上涨。

Phillip upgrades SPCX to Buy from Sell and raises PT to $250 from $75, citing compute demand running ahead of available capacity and renewals clearing at higher $/W. The firm expects new capacity to achieve sub-1-year paybacks, while management guidance implies Q1 revenue more than doubles vs. 3Q26. The upgrade is essentially a major reset higher to both utilization/pricing and compute economics.

菲利普公司将 SPCX 的评级从“卖出”上调至“买入”，同时将目标价从 75 美元提升至 250 美元。其理由是计算需求持续高于现有产能，且设备续订时的价格也更高。该公司预计新产能的投资回报周期将短于 1 年；此外，管理层预计第一季度的营收将会是 2026 年第三季度的两倍多。这一评级上调实际上意味着该公司的利用率、价格以及盈利状况都将有显著提升。

SPCX / Towers: BNP says U.S. tower talks reinforce 4th-carrier ambitions; EU telco risk looks more limited

SPCX/塔式基础设施业务：BNP 认为，美国境内的相关谈判进一步强化了该公司成为第四家运营商的雄心；而欧盟地区的电信行业风险则似乎较为有限。

BNP highlights reports that SpaceX is in talks with at least one U.S. tower operator for ~80K cell sites as it pushes toward becoming a 4th U.S. carrier, a clear positive read-through for tower names and negative for incumbent wireless. For Europe, BNP sees a harder path given limited spectrum access, existing coverage obligations, fewer independent tower sites and potential regulatory/political friction, making MVNO partnerships more likely than a full facilities-based build. Near term, EU telcos could still trade down on the headline while TowerCos benefit, but BNP sees much less fundamental risk in Europe than in the U.S.

BNP 强调有报道称，SpaceX 正与至少一家美国铁塔运营商洽谈约 8 万个蜂窝站点，以推动其成为美国第四家运营商，这对铁塔公司股票显然是利好，对现有无线运营商则是利空。对于欧洲，BNP 认为路径更为艰难，原因是频谱获取受限、现有覆盖义务、独立铁塔站点较少以及潜在的监管/政治摩擦，因此更可能采取 MVNO 合作模式，而非完全基于自建设施的网络。短期内，欧盟电信运营商仍可能因这一消息面承压下跌，而铁塔公司则受益，但 BNP 认为欧洲的基本面风险远小于美国。

SPCX / AI Debt: $40B financing faces materially higher borrowing costs – Semafor

SPCX/AI 相关债务：400 亿美元的融资项目将面临高得多的借贷成本——Semafor 报道

Semafor reports SpaceX is finalizing a $40B chip-financing package with Apollo and Goldman Sachs. A safer chip-backed tranche is expected to yield 7.75%, more than a percentage point above its existing bonds, while a lower-rated portion could cost about 8.3%. Pricing is expected next week as investor concerns about AI financing intensify.

据 Semafor 报道，SpaceX 正在与 Apollo 及高盛协商，为芯片项目筹集 400 亿美元的融资资金。其中，风险较低的芯片相关债券的利率预计为 7.75%，这一数值比其现有债券的利率高出 1 个百分点以上；而风险较高的债券则可能需要 8.3%的利率。由于投资者对人工智能相关融资项目的担忧日益加剧，具体的利率数值预计将在下周确定。

SKHY: SK Hynix announces Solidigm halts review of potential IPO

SKHY：SK 海力士宣布 Solidigm 已停止对该公司首次公开募股的评估工作

SK Hynix announced Solidigm will halt its review of potential pre-IPO and IPO options. This decision does not reflect any change in Solidigm's growth prospects or investment needs. Rather, in light of recent capital market conditions and share price trends, Solidigm determined that it was necessary to reassess whether an IPO would be the most beneficial option for SK hynix and its existing shareholders at this time.

SK 海力士宣布，Solidigm 将停止对上市前及上市相关方案的评估。这一决定并不意味着 Solidigm 的成长前景或投资需求发生了变化。而是鉴于近期的资本市场状况及股价走势，Solidigm 认为有必要重新评估：在当前阶段，上市是否真的是对 SK 海力士及其现有股东最有利的选择。

Hypers: Hearing Edge positive saying saw late Q3 accel and some pulled forward cloud renewals, especially at AWS

乐观观点认为：有迹象显示，第三季度末业务增速有所加快，同时一些企业的云服务续订也提前进行了，尤其是 AWS 领域的客户。

CRWV: UBS cuts PT to $105 but sees selloff driven by credit/sentiment rather than fundamental deterioration

CRWV：瑞银将目标价下调至 105 美元，认为股价下跌是由信贷状况与市场情绪所致，而非公司基本面恶化。

UBS says CRWV's ~37% October drawdown and wider CDS spreads reflect a broader loss of confidence in capital-intensive, leveraged AI infra rather than a fresh company-specific crack; GPU pricing and up-stack trends remain encouraging. Still, UBS expects confidence to take multiple quarters to rebuild and is shifting toward more defensive AI exposure such as MSFT/PLTR given stronger FCF and less funding risk. CRWV trades at just ~2.2x 2027 revenue/~3.8x EBITDA, near the low end of AI infra peers, so UBS keeps Buy but cuts PT to $105 from $120 on sector de-rating.

瑞银表示，CRWV 在 10 月~37%的回撤以及 CDS 利差走阔，反映的是市场对资本密集型、高杠杆 AI 基础设施的信心更广泛流失，而非公司层面出现新的裂痕；GPU 定价和上游趋势仍令人鼓舞。尽管如此，瑞银预计信心需要多个季度才能重建，并正转向更具防御性的 AI 敞口，如 MSFT/PLTR，因其自由现金流更强、融资风险更低。CRWV 目前仅以~2.2 倍 2027 年收入/约 3.8 倍 EBITDA 交易，接近 AI 基础设施同行的低端，因此瑞银维持买入评级，但因板块估值下调将目标价从 120 美元下调至 105 美元。

AI Credit / CRWV: Global spreads reach 17-month high; CoreWeave bonds yield 15% – Bloomberg

AI 信贷/CRWV：全球利差升至 17 个月来的最高水平；CoreWeave 债券的收益率高达 15%——彭博社报道

Bloomberg reports global corporate-bond spreads widened to 129bp, their highest since May 2025, as AI-stock losses and geopolitical tensions drove investors toward safer assets. Its separate financing report shows some CoreWeave corporate bonds trading near 80 cents on the dollar and yielding roughly 15%, while two chip-backed leveraged loans remain near par.

彭博社报道称，由于人工智能相关股票表现不佳以及地缘政治紧张局势，投资者纷纷转向更安全的资产，导致全球企业债券的利差扩大至 129 个基点，这一水平为 2025 年 5 月以来的最高值。该机构的另一份融资报告显示，部分 CoreWeave 企业债券的交易价格约为面值的 0.8 美元，收益率则在 15%左右；而两笔以芯片作为抵押的杠杆贷款则仍接近其面值。

HUBS: BTIG sees limited 3Q upside as partner checks soften, but RIF savings support FY27 margins; PT to $300

分析师观点：BTIG 认为，由于合作伙伴的订单状况有所恶化，第三季度的业绩提升空间有限；不过 RIF 业务带来的收益有望提升 2027 财年的利润水平；目标价定为 300 美元。

BTIG's partner checks deteriorated q/q, with longer sales cycles, greater pricing scrutiny and new competitors such as Day.AI/Creatio, though Agent Builder feedback remains constructive. BTIG models ~15% cc 3Q revenue growth with only modest upside, roughly consistent with last quarter's ~100bps beat, and expects HUBS to maintain FY26 guidance. The bigger offset is the recent ~7% RIF, which could add ~260bps to FY27 operating margin and provide an earnings backstop if topline growth stays durable. Buy, PT $300 from $250.

BTIG 的渠道调研环比恶化，销售周期拉长、定价审查加强，并出现 Day.AI/Creatio 等新竞争对手，不过 Agent Builder 的反馈仍具建设性。BTIG 模型预计第三季度固定汇率收入增长 15%，上行空间有限，与上一季度约 100 个基点的超预期大致相符，并预计 HUBS 将维持 2026 财年指引。更大的抵消因素是近期 7%的裁员，这可能为 2027 财年营业利润率增加 260 个基点，并在营收增长保持持久的情况下提供盈利支撑。买入，目标价从 250 美元上调至 300 美元。

DDOG: Wells survey shows steady share gains as AI/agentic coding drives incremental observability spend

DDOG：威尔斯的调查显示，得益于人工智能与代理编程技术的发展，相关领域的可观测性解决方案需求持续增长，其市场份额也在稳步上升。

Wells' large-customer survey (~$89M annual DDOG spend) remains constructive, with most respondents expecting 2026 spend growth of 5%+ and continued DDOG share gains. AI is becoming a meaningful incremental tailwind: 92% say AI initiatives are increasing observability spend, 80% cite agentic coding tools like Claude Code/Cursor, and over half report >10% higher observability spend from AI. Overall spending intentions improved slightly q/q, supporting a healthy demand setup into year-end.

Wells 对大型客户的调查（DDOG 年支出约 8900 万美元）仍持建设性看法，多数受访者预计 2026 年支出增长 5%以上，且 DDOG 份额持续提升。AI 正成为有意义的增量顺风：92%表示 AI 举措正在增加可观测性支出，80%提到 Claude Code/Cursor 等智能体编程工具，超过一半报告 AI 带来可观测性支出增加 10%以上。整体支出意愿环比略有改善，支持年底前健康的需求格局。

DDOG: Reported Upwind bid disputed – The Information / CTech

DDOG：有关上风方向出价的报道存在争议——《The Information》/CTech

The Information reports a nearly $4B Datadog bid for Upwind. CTech disputes the report, saying no offer was made.

有报道称，Datadog 愿意出近 40 亿美元收购 Upwind。CTech 则否认了这一报道，称并未收到任何收购要约。

MSFT: BofA raises FY27–29 estimates; Azure + Copilot remain the core upside engines

MSFT：美国银行上调了 2027 年至 2029 年的业绩预期；Azure 与 Copilot 仍是推动股价上涨的核心动力。

BofA models F1Q27 Azure at +44.8% cc to ~$32.3B, supported by ~1GW of quarterly

DC additions and $678B of commercial RPO, while FY27 CapEx rises to ~$221B (+52% y/y). The bigger bull case is enterprise AI monetization: 76.7% of CIOs use/plan to use Copilot, 88.4% consider MSFT for cloud AI infrastructure and 69.3% expect to raise Microsoft security spend. BofA increasingly frames Copilot as the enterprise operating layer across apps, data, security and governance. Buy/$600.

美银模型预测，微软 2027 财年第一季度 Azure 按固定汇率计算增长 44.8%，达到 323 亿美元，支撑因素包括单季新增 1GW 数据中心容量以及 6780 亿美元的商业 RPO，同时 2027 财年资本支出升至 2210 亿美元（同比+52%）。更大的看涨情景在于企业 AI 变现：76.7%的首席信息官正在使用或计划使用 Copilot，88.4%考虑将微软作为云 AI 基础设施选项，69.3%预计将增加微软安全支出。美银日益将 Copilot 定位为跨应用、数据、安全和治理的企业运营层。买入/目标价 600 美元。

Software: BofA CIO survey shows AI taking ~40% of 2027 priorities, with MSFT dominating spend intentions

软件领域：美国银行首席信息官的调查显示，到 2027 年，人工智能将在各项优先事项中占据 1001#40%的比重，而微软则最有可能在相关投资上占据主导地位。

BofA sees 2027 software budgets +5.3%, with AI wallet share rising to 9.4% from 8.3% and ~61% of AI funding coming from net-new budgets. MSFT dominates across cloud AI, infrastructure software and Copilot, while SNOW is the strongest next-tier infrastructure beneficiary and CRWD/PANW benefit from cybersecurity budgets +6.9% and AI security leading incremental spend. The key risk is ROI: only 17.2% of CIOs report measurable enterprise-wide AI returns today, while ~60% expect just 1–25% of agent pilots to reach production.

美银预计 2027 年软件预算增长 5.3%，其中 AI 预算份额从 8.3%升至 9.4%，且~61%的 AI 资金来自净新增预算。MSFT 在云 AI、基础设施软件和 Copilot 领域占据主导地位，而 SNOW 是下一梯队基础设施中最强的受益者，CRWD/PANW 则受益于网络安全预算增长 6.9%以及 AI 安全引领增量支出。关键风险在于投资回报率：目前仅有 17.2%的 CIO 报告称 AI 在全企业范围内带来了可衡量的回报，而~60%的 CIO 预计仅有 1%至 25%的智能体试点能够进入生产阶段。

NOK: JPM says FY27 guide is deeply conservative; NI

EBIT could land ~27% above Street

NOK：JPM 认为 2027 财年的业绩预期过于保守；NI 的 EBIT 增幅可能会达到市场预期的 1001#27%以上。

JPM keeps NOK OW and cuts ADR PT to $20.50 from $21 on FX only, arguing the fundamental setup has improved. AI & Cloud orders reached €1.5B in 3Q and €6.2B including longer-dated backlog; current FY27 Optical/IP guidance of +25–30% implies just ~77.5% order conversion vs. ~96% in FY26. If conversion holds near current levels, JPM sees AI & Cloud revenue at ~€5.17B, Optical/IP growth >42% and NI EBIT ~27% above consensus, translating to ~14% company EPS upside. At ~11.7x 2028E EPS, valuation remains well below NOK's historical multiple.

摩根大通维持诺基亚"增持"评级，仅因汇率因素将目标价从 21 美元下调至 20.50 美元，认为基本面已改善。AI 与云业务订单在第三季度达到 15 亿欧元，若计入更长期订单储备则达 62 亿欧元；当前 2027 财年光学/IP 业务指引为增长 25%–30%，仅隐含约 77.5%的订单转化率，而 2026 财年为 96%。若转化率维持在当前水平附近，摩根大通预计 AI 与云业务收入将达约 51.7 亿欧元，光学/IP 业务增长超过 42%，网络基础设施息税前利润较市场一致预期高出约 27%，对应公司每股收益有约 14%的上行空间。按 2028 年预期每股收益计算，估值约为 11.7 倍，仍远低于诺基亚的历史倍数。

Ecommerce: Wedbush stays positive into 3Q; EBAY Top Pick, SHOP also favored

电子商务：韦德布什仍看好第三季度表现；EBAY 为首选股，SHOP 亦受青睐。

Wedbush expects solid 3Q ecommerce results as traffic/app MAU trends remain positive, with AI agents/bots contributing to web traffic growth. EBAY is the Top Pick, with GMV expected above guidance and strength in eBay Live, collectibles and other focus categories supporting durable growth; PT $137. SHOP is also favored on agentic-commerce positioning and merchant additions, though valuation at ~55x 2027 EV/EBITDA limits upside; OP/$176. ETSY remains Neutral/$88 as product improvements help GMS but comps tighten, while W stays Neutral/$125 given housing/macro pressure despite improving share trends.
