

TMTB EOD Wrap: The Great Gross-to-Net Panic of 2026

TMTB 收盘综述：2026 年毛额转净额恐慌潮

TMT BREAKOUT

2 HOURS AGO • PAID

Listen

Good afternoon. **QQQs -1.3%** and **Semis -3.4%** were already soft on oil and yields when the FT's 12:45pm headline that OpenAI's annualized revenue is ~\$20B below what had been signaled took SOX from about -1.7% to -3.4% in fifteen minutes; and it never really recovered (-4.6% at the lows). Turns out the biggest risk to the AI trade isn't power, open source, financing or the Dems winning in November. It's actually GAAP.

下午好。QQQ 下跌 1.3%，半导体股下跌 3.4%；在油价和收益率的拖累下，市场本已表现疲软。随后，英国《金融时报》于 12:45pm 发布头条称，OpenAI 的年化营收比此前透露的数字低~\$20B，导致 SOX 在十五分钟内从约下跌 1.7%扩大至下跌 3.4%；之后也始终未能真正收复失地（盘中低点跌幅达 4.6%）。结果发现，AI 交易面临的最大风险既不是电力、开源、融资，也不是民主党人在 11 月获胜，而是 GAAP。

OpenAI's ~\$50B September ARR vs the previously reported ~\$70B is the difference between gross and net so the headline was misleading (recall: OAI has to share 20% with MSFT and has the Bedrock deal as well).

OpenAI 9 月 ARR 为~\$50B，而此前报道的数字是~\$70B，差额来自总额与净额的区别，因此这个头条具有误导性（回想一下：OAI 必须将 20%分给 MSFT，而且还与 Bedrock 有合作协议）。

Key quote from FT article: "According to a person with knowledge of the matter, the discrepancy arose from attempts by OpenAI's own investors to produce a direct comparison with Anthropic's annualised revenues. **The pair calculate the figure in different ways, with Anthropic including the revenue from sales via cloud partners such as AWS and Google Cloud, while OpenAI does not.**"

《金融时报》文章的关键引述：“据一位了解此事的人士称，差异源于 OpenAI 自己的投资者试图与 Anthropic 的年化营收进行直接比较。两家公司计算这一数字的方式不同：Anthropic 将通过 AWS 和 Google Cloud 等云合作伙伴销售所产生的营收计入其中，而 OpenAI 则没有。”

Last week we got a \$70B figure from Axios which catalyzed enthusiasm among the AI bulls. But the actual progression from Q2 to Q3 seems to be ~\$30B → ~\$50B, not ~\$40B → ~\$70B, roughly the same 70% growth rate but off of different numbers.

上周，Axios 报道了一个 \$70B 的数字，激发了 AI 多头的热情。但从 Q2 到 Q3 的实际增长轨迹似乎是 ~\$30B → ~\$50B，而非 ~\$40B → ~\$70B；增速大致同为 70%，但基数不同。

bretzel Today at 10:46 AM

so to summarize as best i can tell, oai never reported the \$40B figure but someone "grossed" that number up to match ANT, then others applied the 70% growth rate to get \$70B but all stemmed from the july \$40B not being correct -- still unbelievable that oai would not correct any of this!

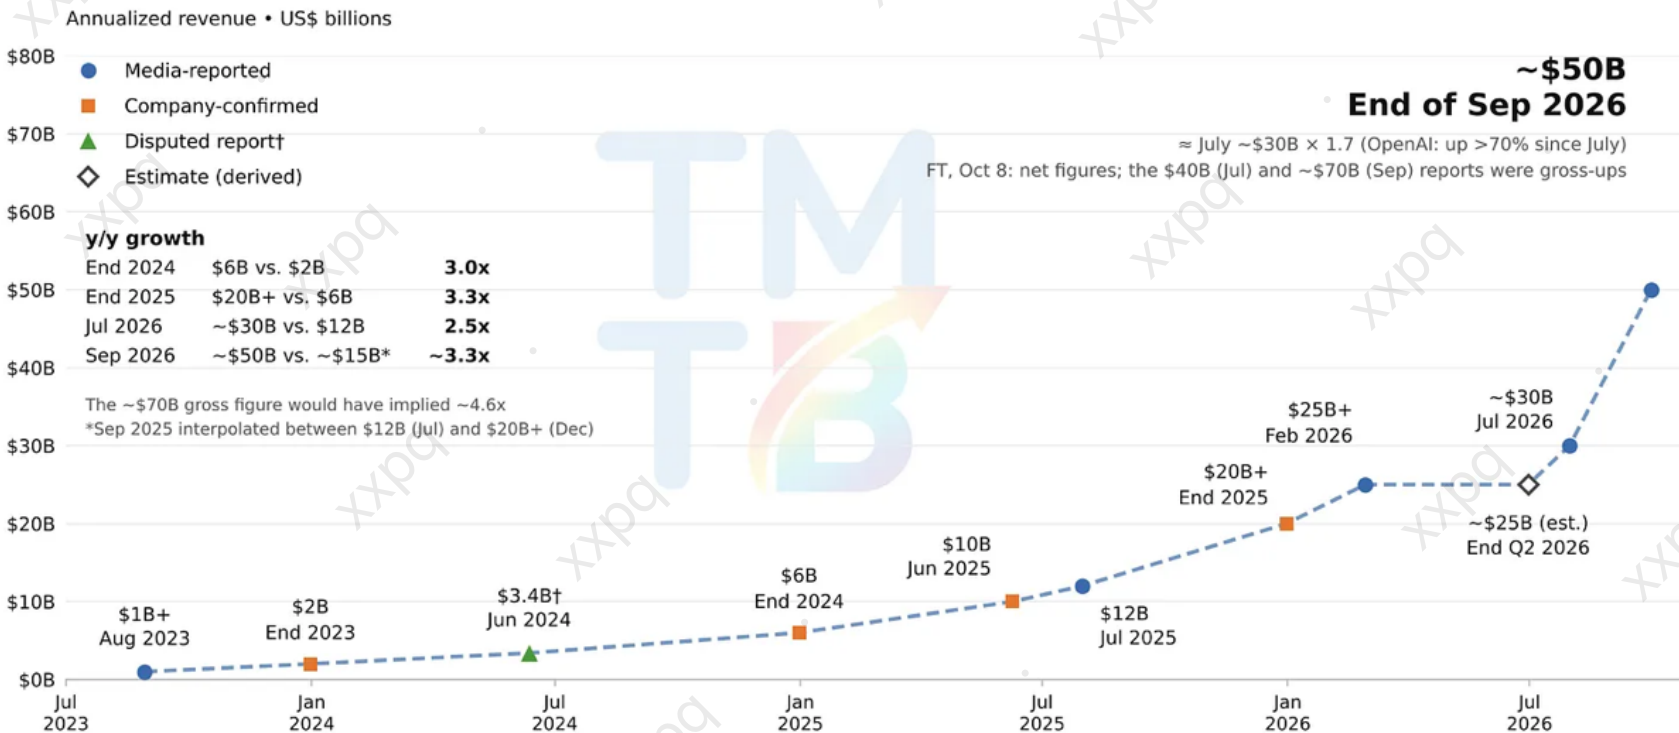

2

Here’s my best attempt at how things look and what the numbers we have heard imply:

以下是我对当前情况以及我们听到的数字所反映的信息的最佳解读：

OpenAI’s revenue run rate

Selected company disclosures and media reports | August 2023–September 2026

Sources: OpenAI CFO; The Information; CNBC; Bloomberg; Axios; FT. • Compiled October 8, 2026.

Run rate is an annualized pace—not annual revenue or profit—on OpenAI’s own (net) basis. “+” denotes a lower bound; “~” is approximate.

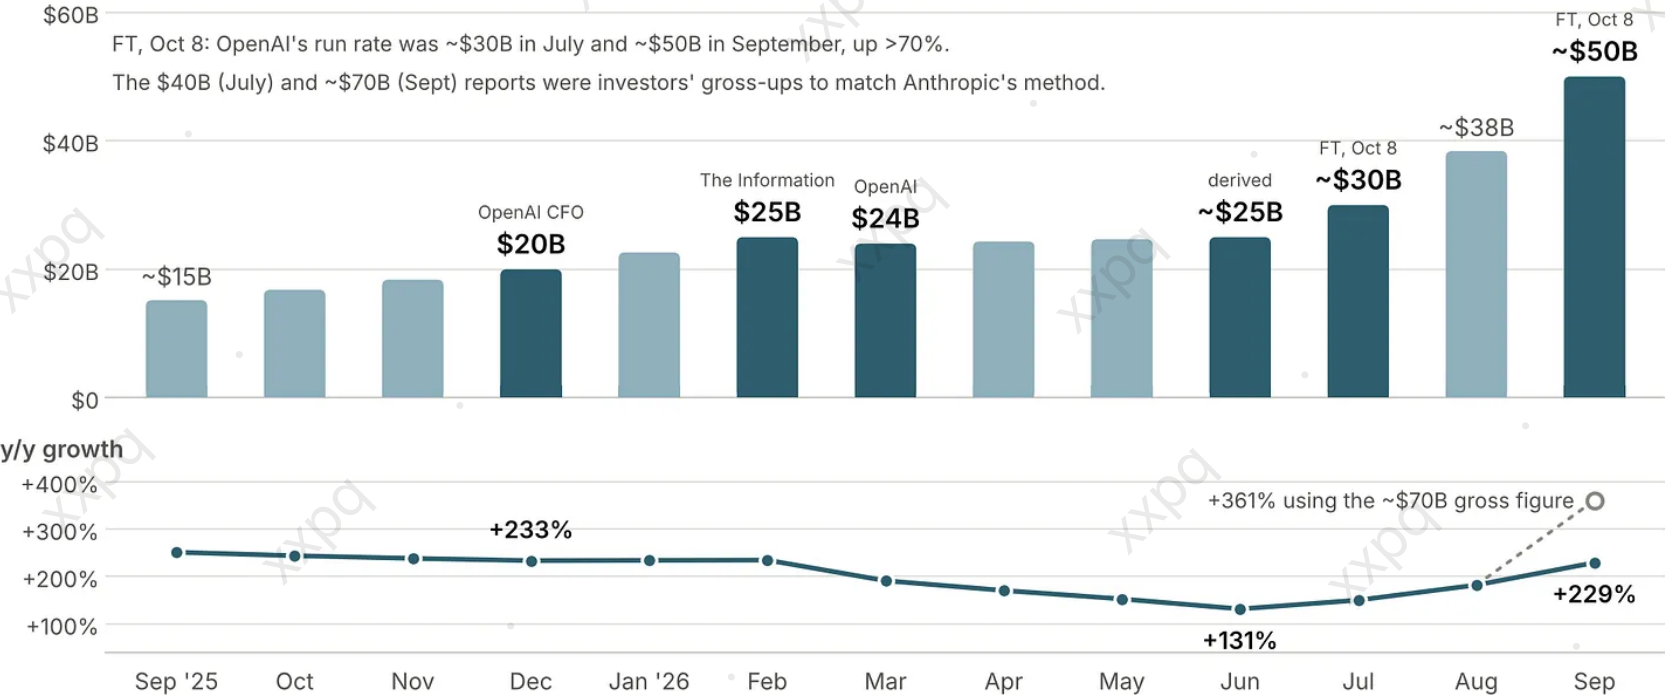

†OpenAI disputed financial details. Year-end milestones use later company disclosures; definitions may vary.

Estimates: end-Q2 2026 = July ~\$30B (FT) ÷ 1.2 (Brockman via Bloomberg: July +20% m/m); end-Sep ≈ July × 1.7 (>70% since July).

OpenAI ARR: ~\$50B in September, up ~3.3x y/y

Net annualized revenue run rate (\$B, month-end) and y/y growth

Reported or derived Estimated

Net run rate on OpenAI's basis, which excludes sales through cloud partners (Anthropic's includes them, per FT). Reported figures are mostly "more than" floors.
Jun '26 = July ~\$30B ÷ 1.2 (July +20% m/m). Aug interpolated via ~\$34B on Aug 19 (+35% QTD). Apr-May straight-line from March. Sep ≈ July × 1.7 (>70% since July).
Year-ago base interpolated the same way: ~\$4B Sep '24, \$6B Dec '24, \$10B Jun '25, \$12B Jul '25, \$20B Dec '25.
Sources: OpenAI CFO Sarah Friar blog (1/18/26); OpenAI funding release (3/31/26); The Information (3/4/26); Bloomberg (8/13/26); CNBC (9/29/26, 8/19/26, 8/20/25, 6/9/25); FT (10/8/26); WSJ (9/12/24).

Glass half empty: People had thought \$70B was net and the *perceived* dollar base just reset ~25–30% lower. OpenAI added ~\$20B of ARR over August and September, not ~\$30B. The first half was also weaker than people thought. The net run rate sat at ~\$24–25B from February through June, and y/y growth slid to ~130% y/y by June, a big decel from Dec 2025. That's a lower starting point for YE26/YE27 net ARR targets & for valuation, and for the math on funding OAI's compute commitments.

悲观的一面：人们原以为 \$70B 是净额，而如今市场感知美元基数下调了 ~25–30%。OpenAI 在 8 月和 9 月新增了 ~\$20B 的 ARR，而非 ~\$30B。上半年表现也弱于预期。2 月至 6 月，净运行率维持在 ~\$24–25B，到 6 月同比增速降至 ~130% y/y，较 2025 年 12 月大幅放缓。这意味着 YE26/YE27 净 ARR 目标和估值的起点更低，也使 OAI 履行算力承诺所需资金的测算变得更难。

Glass half full: The growth rate hasn't changed. \$30B → \$50B net is the same ~70% in two months as \$40B → \$70B gross, and the monthly additions picked up into September. The y/y line bottoms at +131% in June, then climbs to +150% in July, +182% in August and +229% (~3.3x) in September. Had July really been \$40B, September's \$50B would have meant y/y growth flat at ~230%. On the net base, it's actually sharp re-acceleration of ~100% y/y in 4 months. Against Anthropic nothing changes, because the ~\$70B gross figure is still the like-for-like comparison.

往好处看：增长率并没有变化。净额从\$30B 升至\$50B，两个月增长~70%，与总额从\$40B 升至\$70B 相同，而且月度增量在 9 月有所加快。同比增速在 6 月触底于+131%，随后 7 月升至+150%，8 月升至+182%，9 月升至+229%（约 3.3 倍）。如果 7 月的数字真是\$40B，那么 9 月的\$50B 就意味着同比增长持平于~230%。以净额为基数，实际上 4 个月内同比增长~100%，重新明显加速。与 Anthropic 相比则没有变化，因为~\$70B 的总额仍然是同口径比较。

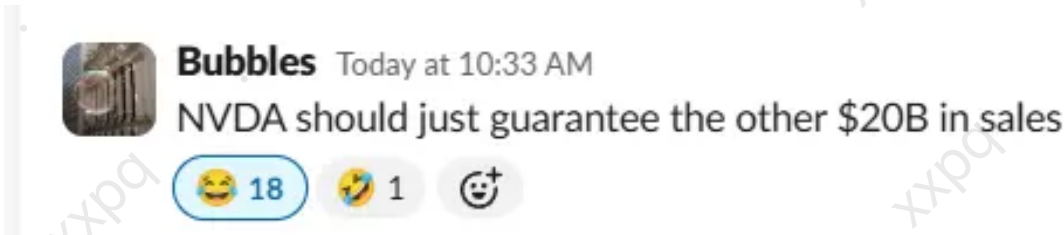

We had a fun day in TMTB Slack and set a record for most comments in a thread [here](#)

我们在 TMTB Slack 里度过了愉快的一天，并创下了此处单个讨论串评论数最多的纪录

Favorite comment in the thread:

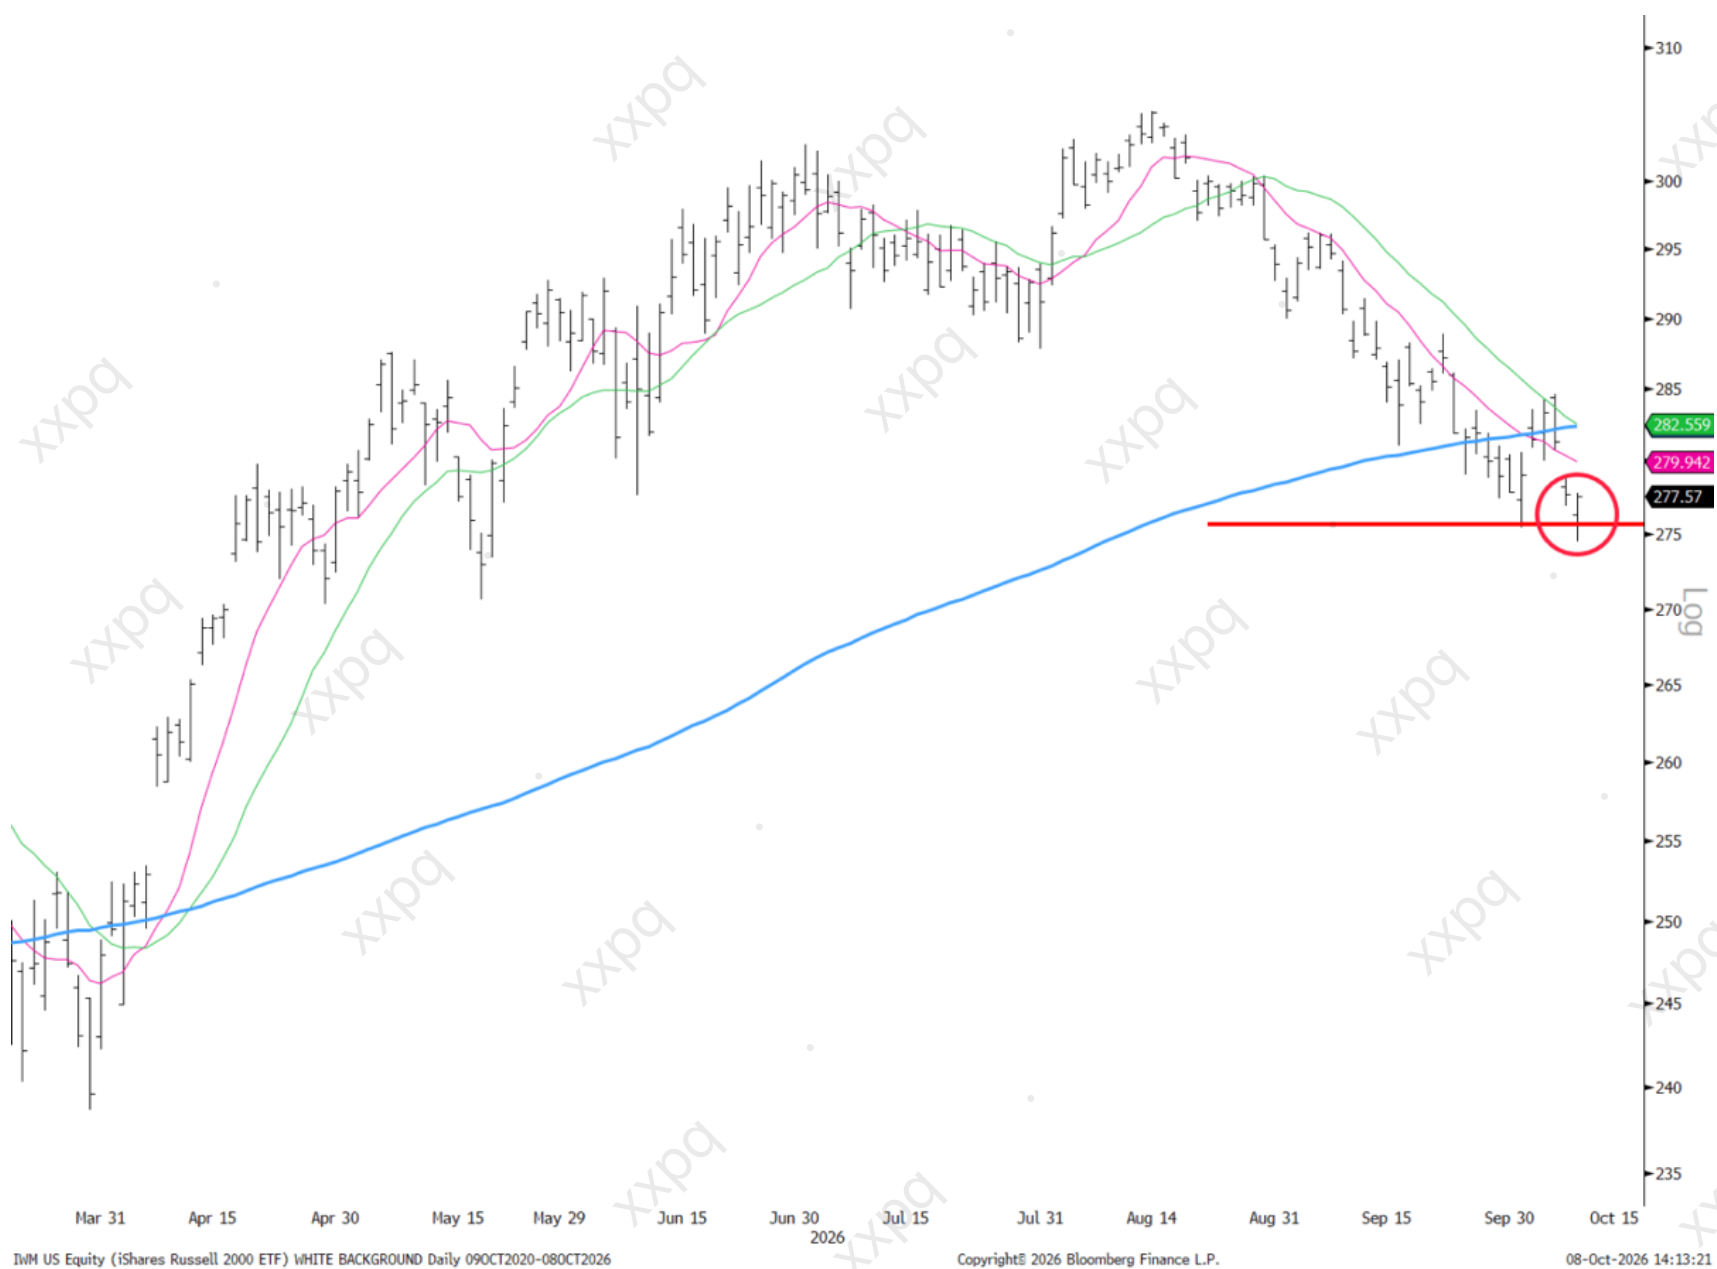

讨论串里最喜欢的一条评论：

Moving on... [继续说正事.....](#)

Software -23bps held in and **IWM flat** finished well off its -1% morning lows as the long end rallied. Chart here looks interesting with IWM breaking its low but finishing above it, a false breakdown that can typically presage further strength

软件板块下跌 23bps，IWM 持平，最终远高于早盘-1%的低点，长端债券走强。图表走势颇值得关注：IWM 跌破前低后收于其上方，形成假跌破，这通常预示着后续还有进一步走强的可能

It was a rotation out of anything with AI-capex or AI-financing beta: neoclouds and miners, already sliding on Firmus' IPO stumble (**HUT -11%**; **CRWV -8%**; **NBIS -7.4%**; **IREN -7.7%**), optics and AI networking (**COHR -9.6%**; **ALAB -9%**; **GLW -6.4%**; **LITE -5.6%**), AI power (**BE -6.3%**; **VST -6.3%**) and the OpenAI counterparties (**ORCL -5.6%**; **AVGO -4.3%**; **NVDA -3%**) led the way lower. The other side of the trade was another squeeze in the AI-loser baskets: IT services (**ACN +6%**; **CTSH +5%**), the Muse-disintermediation names (**Z +7%**; **EXPE +4.4%**; **ETSY +5%**; **EBAY +4%**) and seat-based software (**HUBS +5.3%**; **MNDY +6.5%**; **FIG +4.7%**). **AAPL +1%** was the only green megacap ahead of Tuesday's smart-home event.

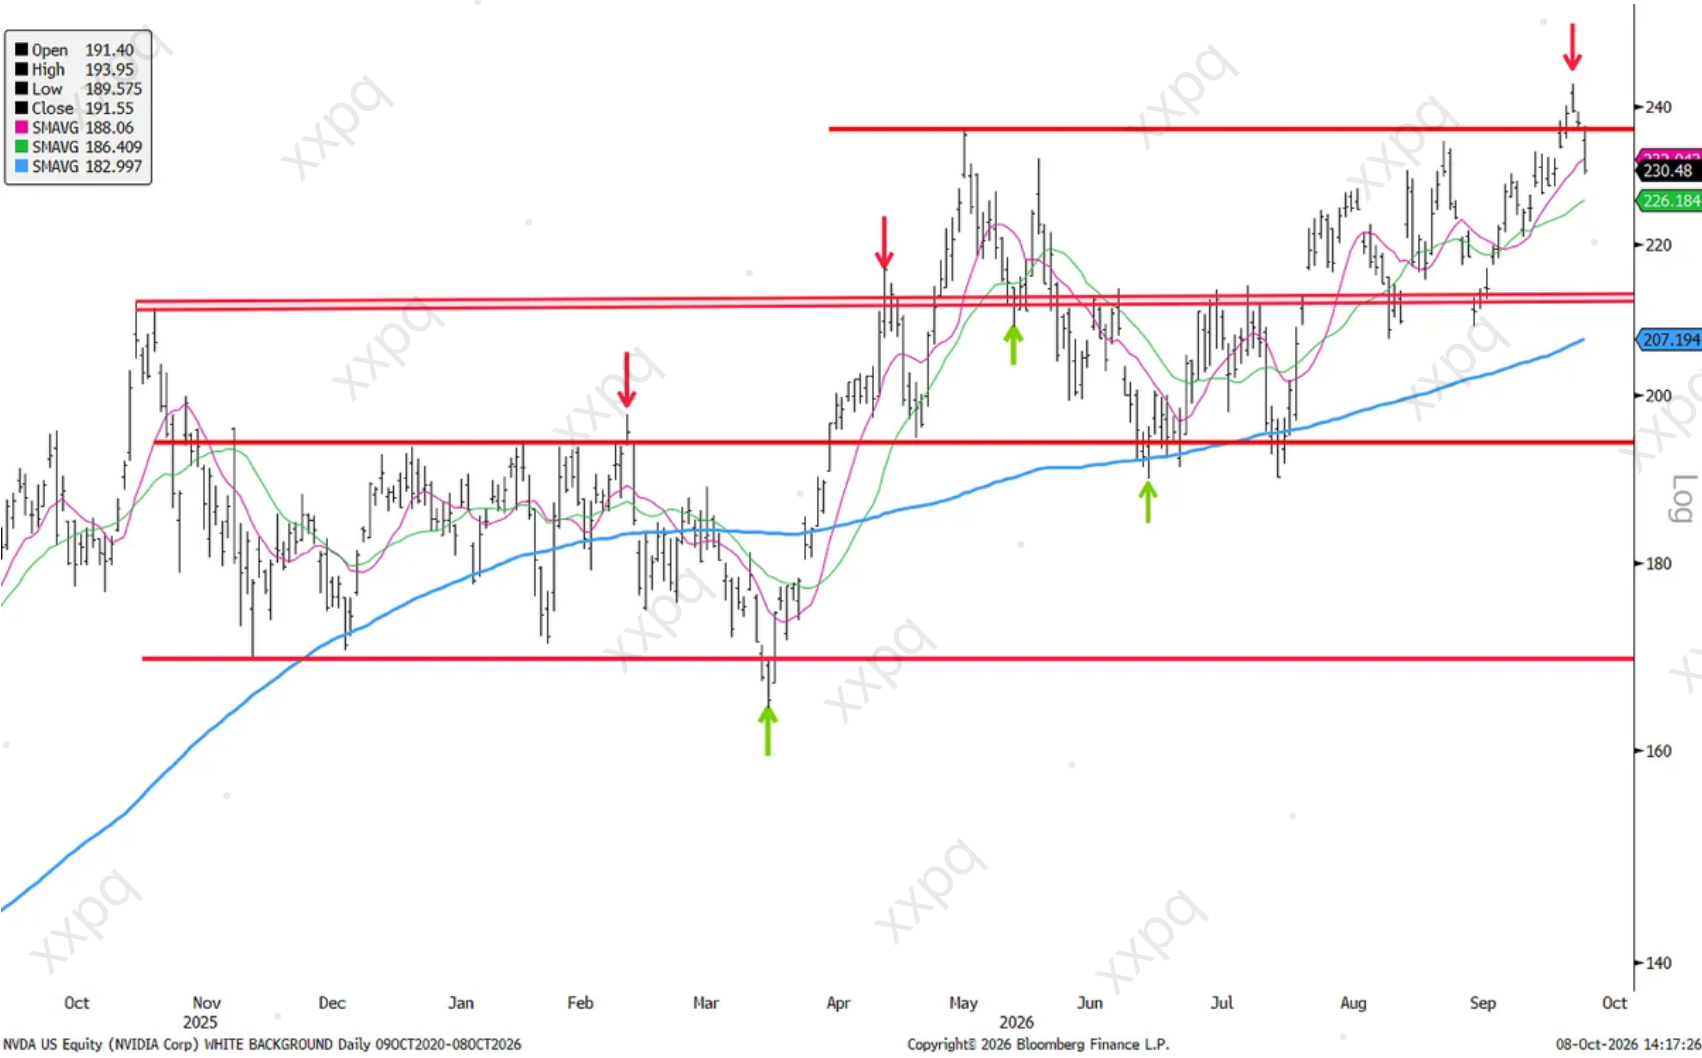

市场轮动抛售所有具有 AI 资本支出或 AI 融资敞口的标的：云服务新秀和矿工此前已因 Firmus IPO 受挫而下跌（**HUT -11%**；**CRWV -8%**；**NBIS -7.4%**；**IREN -7.7%**）；光学和 AI 网络设备（**COHR -9.6%**；**ALAB -9%**；**GLW -6.4%**；**LITE -5.6%**）、AI 电力（**BE -6.3%**；**VST -6.3%**）以及 OpenAI 交易对手方（**ORCL -5.6%**；**AVGO -4.3%**；**NVDA -3%**）领跌。交易的另一边，AI 输家组合再次遭遇逼空：IT 服务（**ACN +6%**；**CTSH +5%**）、Muse 去中介化相关标的（**Z +7%**；**EXPE +4.4%**；**ETSY +5%**；**EBAY +4%**）以及按席位收费的软件股（**HUBS +5.3%**；**MNDY +6.5%**；**FIG +4.7%**）。在周二智能家居活动前，**AAPL** 上涨 1%，是唯一收涨的超大市值股。

Couple charts worth flagging in semis...

半导体板块有几张图值得关注.....

NVDA with what could be a false breakout. Has typically led to some further weakness (see the red arrows)

NVDA 可能出现假突破。以往这通常会导致股价进一步走弱（见红色箭头）

The other semis that were hitting 52wk highs this week: **LITE** and **TSM** charts also look similar dipping below previous resistance after ATHs, but **AMD** still holding its breakout.

本周触及 52 周高点的其他半导体股：**LITE** 和 **TSM** 的走势看起来也很相似，在创下 **ATH** 后跌破此前阻力位，但 **AMD** 仍守住了突破位。

WDC breaking one of few stocks actually breaking below Leopold lows:

WDC 跌破了少数几个实际上跌破 Leopold 低点的股票之一：

Overall, wouldn't surprise us if a bit more digestion could be in the cards and we managed some semi risk today, but we're not overreacting to what *Arun* in Slack aptly called a "storm in a teacup."

总体而言，如果市场还需要多一些时间消化，我们也不会感到意外。今天我们对半导体风险做了一些管理，但不会对 Arun 在 Slack 上恰如其分地称为“茶杯里的风暴”的行情反应过度。

In macro land, oil and Iran set the tone early before the long end turned. **WTI +3.4%** to ~\$91 (it was +5% pre-market) on reports the military is readying Iran strike options, and only partly gave it back after Trump posted around 12:20pm that the US won't attack Iran before the midterms. The **10Y -6bps to 5.22% (TLT +94bps)** after touching ~5.35% this morning, with the long end leading (**30Y -7bps to 5.60%; 2Y -2bps to 4.75%**) after a decent 1pm 30Y auction (2.54x bid-to-cover vs. a 2.41x average). ~18% odds of a 10/28 hike, about where it was yesterday, and ~69% by December. **BTC -2%** to ~\$81.7K, a three-week low.

宏观方面，油价和伊朗局势早盘定下基调，随后长端利率走势转向。有报道称军方正在准备打击伊朗的方案，WTI 上涨 3.4%，至~\$91（盘前一度上涨 5%）；特朗普约在 12:20pm 发帖称，美国不会在中期选举前攻击伊朗，此后油价仅部分回吐涨幅。今早触及~5.35%后，10Y 下跌 6bps 至 5.22%（TLT 上涨 94bps）；在一场表现不错的 1pm 30Y 国债拍卖后，长端领跌（30Y 下跌 7bps 至 5.60%；2Y 下跌 2bps 至 4.75%），投标倍数为 2.54x，高于 2.41x 的均值。~10/28 加息的概率为 18%，与昨日大致持平；~到 12 月的概率为 69%。BTC 下跌 2%，至~\$81.7K，创三周新低。

Does anything else matter today? Who knows, but let’s get to it...

今天还有别的事重要吗？谁知道呢，不过我们开始吧.....

JP in TMTB Slack [here](#): "Powered shells are rates beta + mtum." Pricing checks still sound strong - one check we heard this week called out 6-9 month Vera Rubin contracts clearing at ~\$40B/GW annualized vs. \$10-15B for long-term deals.

TMTB Slack 上的 JP 表示: "Powered shell 是利率 beta + mtum。"定价调查听起来依然强劲——本周我们听到的一则反馈称, 期限为 6-9 个月的 Vera Rubin 合约, 按年化计算的成交价达到 ~\$40B/GW, 而长期合约的价格为 \$10-15B。

- **AVGO -4.3%** underperforming as an OpenAI chip supplier: WSJ had it discussing \$50B+ of financing for OpenAI's custom-chip program (starting with Jalapeño) with Apollo, Blackstone and others last night. That's the medium-term bear case/overhang: ~15GW of the ~20GW behind AVGO's \$230B FY28 AI outlook is Anthropic/OpenAI, which isn't self-funding, hence the residual-value guarantees and financing talks; bears will say bulls need the first OpenAI/Anthropic GWs to convert on time despite stock already trading at low-teens multiple of >\$30 of FY28 EPS.

AVGO 下跌 4.3%, 表现落后, 因其作为 OpenAI 芯片供应商的身份受到关注: WSJ 报道称, 昨晚该公司正与 Apollo、Blackstone 等商讨为 OpenAI 定制芯片项目 (从 Jalapeño 开始) 提供 500 亿美元以上融资。这是中期看空理由/压制因素: AVGO 对 FY28 AI 业务的 2300 亿美元展望中, ~15GW (总计~20GW) 来自 Anthropic/OpenAI, 而它们无法自筹资金, 因此才有剩余价值担保和融资谈判; 空头会称, 尽管该股目前对应 FY28 EPS 超过 30 美元的市盈率仅为十几倍, 做多者仍需要首批 OpenAI/Anthropic 吉瓦级项目按时落地。

- Lots of questions on optical weakness: **COHR -9.6%; LITE -5.6%; GLW -6.4%; TSEM -7.9%; CIEN -4.6%; NOK -4.5%**. Mei in TMTB Slack [here](#) flagged that optical transceivers aren't on the agenda the FCC released for its October meeting, the rule to keep new Chinese transceivers out of the US that Reuters first reported in August.

光通信走弱引发了许多疑问：COHR 下跌 9.6%；LITE 下跌 5.6%；GLW 下跌 6.4%；TSEM 下跌 7.9%；CIEN 下跌 4.6%；NOK 下跌 4.5%。TMTB Slack 上的 Mei 在此处指出，光收发器不在 FCC 公布的 10 月会议议程上；该规则旨在阻止新的中国收发器进入美国，Reuters 最早于 8 月报道了此事。

- Memory bulls enjoyed their day in the sun, but came back to earth today: **MU -4.8%**; **SNDK -4.9%**; **SKHY -4.3%** fell even though Samsung's prelim beat the bogey: KRW107.4T of Q3 OP (a ~55% margin) vs. LSEG's KRW106.1T and bogeys that had drifted down to KRW105-106T.

存储多头前一日风光无限，但今天回归现实：MU 下跌 4.8%；SNDK 下跌 4.9%；SKHY 下跌 4.3%，尽管 Samsung 初步业绩超过预期：Q3 OP 为 KRW107.4T（~55%利润率），高于 LSEG 预测的 KRW106.1T，也高于已下调至 KRW105-106T 的市场预期。

- **ALAB -9.2%**; **CRDO -3.7%**; **MRVL -3.5%**: AI networking weaker. **ALAB** was green for a little early after launching its PCIe 7 retimer this morning.

ALAB -9.2%; **CRDO -3.7%**; **MRVL -3.5%**: AI 网络板块走弱。ALAB 今早推出 PCIe 7 retimer 后，盘初一度上涨。

- **ARM -6.5%** traded as an OpenAI proxy through SoftBank and it's in week one of its Delaware jury trial with **QCOM -63bps**, which wants to halt royalty payments for up to five years. [JDorbal1989](#) on X has had great coverage of the trial. Based on his coverage, **QCOM** seems to be ahead on the testimony so far. He describes Day 2 as brutal for Arm after its chief architect admitted ACK verification tools are core to an architecture license, engineers detailed workarounds for roughly 29 withheld patches, and video depositions showed Arm's leadership authorized leaking the October 2024 cancellation notice to Bloomberg during Snapdragon Summit. On Day 3 he writes that QCOM dismantled Arm's most-favored-nation pricing story (Samsung rate quietly swapped for MediaTek, support stripped from the offer) and got Chief Legal Officer Spencer Collins to admit Arm fed the notice to Bloomberg because it expected Qualcomm to leak first, while then barring Qualcomm from reassuring customers. In the bench portion he highlights Judge Noreika pressing CEO Rene Haas on internal "enemy" emails versus public claims that Arm wants Qualcomm to succeed, Haas conceding lingering anger over Nuvia, and Haas stating that Arm alone should set the rates its competitors pay.

ARM -6.5%，被视为通过 SoftBank 间接押注 OpenAI 的标的；目前正进入特拉华州陪审团审判的第一周。QCOM 下跌 63 个基点，寻求暂停支付特许权使用费，最长可达五年。X 上的 JDorbal1989 对这场审判进行了出色的报道。根据他的报道，就目前证词来看，QCOM 似乎占据上风。他形容第二天对 Arm 来说相当惨烈：Arm 首席架构师承认，ACK 验证工具是架构许可的核心；工程师详细说明了针对约 29 个被扣留补丁的变通方案；视频证词还显示，Arm 管理层曾授权在 2024 年 10 月于 Snapdragon Summit 期间向 Bloomberg 泄露取消通知。第三天，他写道，QCOM 驳倒了 Arm 关于最惠国定价的说法（悄然将 Samsung 的费率换成 MediaTek 的费率，并从报价中删去支持服务），还让首席法务官 Spencer Collins 承认，Arm 向 Bloomberg 提供通知，是因为预计 Qualcomm 会先行泄露；但随后 Arm 却禁止 Qualcomm 安抚客户。在证人席环节，他重点提到，诺瑞卡法官就内部“敌人”邮件与公开声称 Arm 希望高通取得成功一事向 CEO Rene Haas 施压；Haas 承认对 Nuvia 仍怀有怒气，并表示应由 Arm 单独决定其竞争对手支付的费率。

- **INTC -5.3%** reports that global sales head Greg Ernst is out a little more than a year after Lip-Bu Tan tapped him.

INTC 跌 5.3%；公司称，全球销售负责人 Greg Ernst 离职，距 Lip-Bu Tan 任命他仅一年多。

Semiconductor News by Dylan Martin

@DylanOnChips

Dylan Martin 撰写的半导体新闻 @DylanOnChips

COVER STORY: Intel's sales leadership shake-up

Intel CEO Lip-Bu Tan last year tapped Greg Ernst, a 27-year veteran, to lead global sales.

A little more than year later, he was out. Just a week earlier, he posted about feeling "energized" about the "opportunities ahead."

封面报道：英特尔销售领导层震荡

英特尔首席执行官陈立武去年任命拥有 27 年资历的格雷格·恩斯特负责全球销售。

一年多一点后，他便离职了。就在一周前，他还发帖称，对“未来的机遇”感到“充满干劲”。

- **TSM -3%** couldn't hold a record quarter: Q3 revenue of NT\$1.49T beat the top of its NT\$1.43-1.47T guide

TSM -3%，创纪录的季度业绩也未能支撑股价：Q3 营收为 NT\$1.49T，高于 NT\$1.43-1.47T 指引区间上限

- **GFS +2.7%** was up as much as 7% after Reuters reported it will make a key AI chip component for TSM (silicon interposers, per the squawk), before giving back more than half with the rest of late afternoon semis drawdown.

路透报道称，GFS 将为 TSM 生产一种关键 AI 芯片组件（据市场快讯称为硅中介层），股价一度上涨多达 7%，涨幅达+2.7%；随后回吐逾半涨幅，与其他半导体股一同在尾盘回落。

- **STM -6.2%; ON -3.8%; MCHP -3.2%; NXPI -1.8%**: analog extended yesterday's slide as Citi downgraded NXPI, arguing positive semi estimate revisions slowed in 2Q and should moderate further in 3Q, with NXPI lagging given limited data-center exposure.

STM -6.2%; ON -3.8%; MCHP -3.2%; NXPI -1.8%: 模拟芯片股延续昨日跌势。花旗下调 NXPI 评级, 理由是半导体行业正向预期修正势头在 2Q 放缓, 预计 3Q 将进一步趋缓; NXPI 因数据中心业务敞口有限而表现落后。

- **WOLF -1.1%** round-tripped a gap up of as much as +15% (and +20% yesterday after hours) on the \$1.5B DoW loan as investors looked at the fine print: the commitment is conditioned on raising at least \$750M of equity and converting a large part of the converts, plus warrants for up to 7.5% of the company.

WOLF -1.1%回吐了盘中高达+15%的跳空涨幅 (昨日盘后也曾上涨+20%)。投资者仔细审视了这笔\$1.5B DoW 贷款的细则: 贷款承诺以至少筹集\$750M 股权融资并转换大部分可转债为条件, 此外还将发行最多占公司 7.5%的认股权证。

- **OLED -5.6%** as Citi downgraded it to Sell, citing valuation.

OLED 下跌-5.6%, 因花旗以估值为由将其评级下调至卖出。

INTERNET

- The Muse-disintermediation shorts got squeezed: **Z +6.9%; EXPE +4.4%; ETSY +5.1%; EBAY +4.1%; LYFT +3.4%; BKNG +2.6%; UBER +2.6%; ABNB +1.6%** Jefferies was out this morning saying only ~1/3 of sites work seamlessly with Muse (~1/3 block it, ~1/3 restrict it), pushing out META's agentic-commerce take-rate math. BKNG rallied even with Evercore's tactical Underperform (weak long-haul, ~7% Middle East bookings). Some stats from Similar web also showed Muse DAUs slightly slowing in October:

押注 Muse 去中介化的空头遭遇逼空: **Z +6.9%; EXPE +4.4%; ETSY +5.1%; EBAY +4.1%; LYFT +3.4%; BKNG +2.6%; UBER +2.6%; ABNB +1.6%**。Jefferies 今天上午表示, 只有~1/3 的网站能与 Muse 无缝协作 (约 1/3 会屏蔽它, ~1/3 会限制它), 这推迟了 META 的代理式商务抽成率测算。尽管 Evercore 战术性给予跑输大盘评级 (长途出行疲软, ~7%的中东预订量), BKNG 仍上涨。Similarweb 的一些数据也显示, Muse 的 DAU 在 10 月略有放缓:

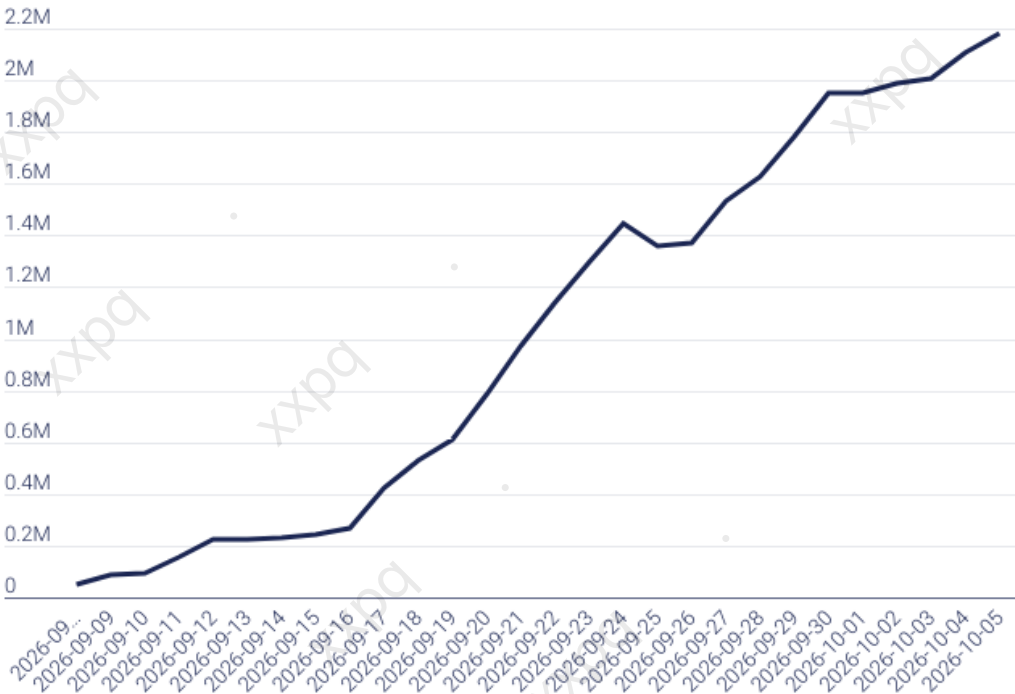

Similarweb
@Similarweb

DAUs on @Muse keep climbing, peaking at 2.182 million on October 5th.

@Muse 的 DAU 持续攀升，并于 10 月 5 日达到 218.2 万的峰值。

DAUs on Muse from Meta since its launch

The chart has four distinct phases of DAU growth (reminder no international launch yet):

DAU 增长分为四个明显阶段（提醒一下：尚未在国际市场上线）：

- Launch week:** Slow, averaging about +28K a day, and stalled around 220–240K from 9/12 to 9/15.
上线首周：增长缓慢，日均约 +28K，并在 9/12 至 9/15 期间停滞在 220–240K 左右。
- Inflection (9/17–9/24):** Adds jumped to about +145K a day, roughly 1.2M new DAUs in eight days.

拐点（9/17–9/24）：新增用户跃升至每天约 +145K，八天内新增 DAU 约 1.2M。

- **Dip and rebound:** After one down day on 9/25, growth returned to about +145K a day from 9/27 to 9/30.

下滑后反弹：9/25 单日下滑后，9/27 至 9/30 的增长恢复至每天约 +145K。

- **Since 10/1:** Growth has slowed to about +45K a day, or 0–4% daily, though 10/4–10/5 picked back up to +80–90K.

自 10/1 起：增长已放缓至每天约 +45K，或每日 0–4%；不过 10/4–10/5 回升至 +80–90K。

- **META -6bps** held in better than the megacaps, catching a bid once Gemini Agent turned out to be enterprise, not consumer. I guess some people were shorting yesterday into this into the Google event given stock was down 2% yesterday. 40% of advertisers in Jefferies' survey expect Muse to increase their META spend over the next 12 months.

META 下跌 6 个基点，表现好于大型科技股；Gemini Agent 被证实面向企业而非消费者后，股价获得买盘支撑。我猜昨天有些人在 Google 活动前做空了这只股票，毕竟其股价昨天跌了 2%。Jefferies 的调查显示，40% 的广告主预计未来 12 个月内 Muse 会推动他们增加在 META 上的支出。

- **GOOGL -63bps** gave back a +1.8% morning high after launching Gemini Agent, its universal enterprise agent. Good discussion in TMTB Slack [here](#) on the detail that it can run on Gemini or Claude models: *davy* asked whether that's GOOGL conceding it isn't at the frontier, and if so whether capex reads lower ("quite positive for the name"); *Anoncapital* countered that Anthropic is GOOGL's biggest TPU customer, so "GOOG needs Anth to continue crushing it." Some flagging GOOGL now favorite to have best model end of the year although *calvin* on Slack caveated: *think it's more of a bet that GOOGL benchmark maxxess than a bet on GOOGL having best model*

GOOGL 下跌 63 个基点，在推出 Gemini Agent（其通用企业级智能体）后，回吐了早盘 1.8% 的涨幅。TMTB Slack 上这里有一段关于其可运行于 Gemini 或 Claude 模型的精彩讨论：davy 提问，这是否意味着 GOOGL 承认自己不在技术前沿？如果是，资本开支预期是否会下降（“对这只股票相当利好”）；Anoncapital 则反驳称，Anthropic 是 GOOGL 最大的 TPU 客户，因此“GOOG 需要 Anth 继续大获成功。”有人指出，GOOGL 现在最有望在年底拥有最佳模型，不过 calvin 在 Slack 上补充说：我认为这更像是在押注 GOOGL 的基准测试成绩达到最高，而不是押注 GOOGL 拥有最佳模型。

- **AMZN -2.3%** lagged despite MS sizing Bedrock at a ~\$10B run-rate growing ~100% sequentially. AWS CEO Garman on a podcast: "We don't anticipate slowing (capex) anytime soon because the demand is just massive". Full podcast recap in our TMTB Podcast Intel this afternoon [here](#).

AMZN 下跌 2.3%，表现落后；与此同时，MS 将 Bedrock 的年化运行收入预估为 ~\$10B，且环比增长 ~100%。AWS CEO Garman 在一档播客中表示：“我们预计短期内不会放缓（资本开支），因为需求实在太庞大了。”今天下午的 TMTB Podcast Intel 将在此处发布完整播客回顾。

SOFTWARE

- Big rally in “AI loser” related names with a lot more green on my screen than not

“AI 输家”相关个股大幅反弹，我的屏幕上绿色远多于红色

- **ACN +6%; CTSH +5.2%; IBM +2.8%** led the AI-loser squeeze, CTSH from -4% at the morning lows after Vance said the US is suspending MSFT and other firms from the PERM green-card program. Rotation took over from there, extending ACN's run since its 10/1 print when it was up mid teens.

ACN 上涨 6%；CTSH 上涨 5.2%；IBM 上涨 2.8%，领涨 AI 输家股的逼空行情。CTSH 早盘一度跌至低点时下跌 4%；此前 Vance 表示，美国将暂停 MSFT 等公司参与 PERM 绿卡项目。随后市场风格轮动占据主导，推动涨势延续；自 10/1 发布业绩、股价上涨十几个百分点以来，ACN 的涨势也进一步延续。

- **HUBS +5.3%；MNDY +6.5%；FIG +4.7%；TEAM +4%；ADBE +3.6%**: seat-based software also squeezed higher helped by the semis drawdown and short-covering, HUBS even after JPM downgraded it this morning (AI monetization taking longer, a medium-term growth headwind rather than a temporary one).

HUBS 上涨 5.3%；MNDY 上涨 6.5%；FIG 上涨 4.7%；TEAM 上涨 4%；ADBE 上涨 3.6%：受半导体股回调和空头回补带动，按席位收费的软件股也大幅走高；尽管 JPM 今天早间下调了 HUBS 评级，该股仍然上涨（AI 变现所需时间更长，这将成为中期增长阻力，而非暂时性因素）。

- **ORCL -5.6%** on OpenAI related weakness. The WSJ story last night had ORCL talking to Apollo and GS about a vehicle that would own chips and lease them back. That supports medium-term bear case that FY27 funding leans on others with correlated exposure to the biggest AI counterparties; bulls will say customer-owned hardware and supplier financing are exactly how capacity outgrows ORCL-funded capex.

ORCL 下跌 5.6%，受 OpenAI 相关疲软拖累。昨晚《华尔街日报》的报道称，ORCL 正与 Apollo 和 GS 洽谈设立一家持有芯片并将其回租的载体。这支撑了中期看空逻辑：FY27 融资将依赖其他方，而这些方面对最大的 AI 交易对手有着相关敞口；多头则会认为，客户持有硬件加上供应商融资，正是产能增长快于 ORCL 资助的资本支出的方式。

- **MSFT -1.3%** with the OpenAI read-through on top of Vance's green-card headline.

MSFT 下跌 1.3%，除了 Vance 绿卡相关头条外，市场也消化了 OpenAI 事件带来的影响。

- **PLTR +2.4%** was up as much as 5% after GS upgraded to Buy, arguing sovereign AI, bespoke apps and verticalization drive another step-up in TAM and another estimate-revision cycle into 2027. Getting close to ATHs again.

PLTR 上涨 2.4%，盘中涨幅一度达到 5%；此前 GS 将其评级上调至 Buy，理由是主权 AI、定制应用和垂直化将推动 TAM 再上一个台阶，并开启新一轮预期修正周期，持续至 2027 年。股价再次逼近历史高点。

- **U +1%** faded for a second day from +4% on RJ's upgrade; several sell-side notes out saying how GOOGL's AI and distribution close the non-coder gap in the creator funnel and Jefferies' buyer survey saying U the biggest expected '27 share gainer.

U 上涨 1%，连续第二天从 RJ 上调评级带来的 +4% 涨幅中回落；多家卖方机构发布报告，称 GOOGL 的 AI 和分发能力正在弥合创作者漏斗中非编码用户的差距；Jefferies 的买方调查则显示，U 是预计 2027 年市场份额增幅最大的公司。

- **APP -42bps**: Jefferies cut '27 EBITDA 7% as its survey has APP's gaming share flattening at ~30% after years of gains, putting the burden on take rate.

APP 下跌 42bps: Jefferies 将'27 年 EBITDA 下调 7%，因其调查显示 APP 的游戏业务份额在多年增长后趋于平稳，维持在~30%，这意味着增长重担落在抽成率上。

- Cyber weaker: **PANW -2%**; **CRWD -1%** although **OKTA +1%** continues to act well
- **TEAM +4%**

Former Global Head of Enterprise Sales at Atlassian on SMB seat declines at \$TEAM

10:30 PM · Oct 8, 2026 · 1110 Views

1 Reply · 1 Like

"That's where they are suffering from the fact that SMB companies grew from 50 to 60 people, which meant 20% growth in user number. Now they've gone from 50 to 40 people because they laid off a bunch of folks. All of a sudden, there's a decline of roughly 20%."
