Global Energy Conference 2026

A new era for energy security? Macro, micro and management Q&A

Our 11th annual JPM Global Energy Conference in London will be hosted in-person on 30 Nov-1 Dec. The event will feature near 50 corporates spanning the energy value chain and a range of pre-eminent industry experts. Keynote speakers include JPMorganChase Chairman and CEO Jamie Dimon, Shell CEO Wael Sawan, Saudi Aramco CFO Ziad Al-Murshed, former BP CEO Lord John Browne and America First Policy Institute Vice-Chair Oliver McPherson-Smith. A comprehensive agenda will explore mid-term implications of this year's unprecedented supply shock. These include a new chapter for energy security and potential for a capex cycle to enhance system contingency. In this report, we preview the agenda and share suggested Q&A topics for covered global companies attending the conference.

Energy macro; oil/OPEC, gas and refining. Inventories have faltered across multiple products and regions. Despite continued supply chain disruption, recent JPM Commodities Research analysis shows the oil market returning to surplus. With this in mind, a panel comprising David Wech (Vortexa Chief Economist), Jaafar Altaie (Manaar Energy, Founder) and Natasha Kaneva (JPM Head of Global Oil and Commodities Research) will debate the repercussions of a momentous 2026 for oil & OPEC. Gas markets remain tight in the near term and the timing of LNG capacity growth has slipped. On Day 1, we host Mike Fulwood (Oxford Institute for Energy Studies) and Massimo Di Odoardo (Wood Mackenzie) on European market dynamics. During Day 2, Zach Davis (Cheniere Energy CFO) will discuss US/global LNG. Refining margins and product market tightness have been in sharp focus. Kevin Mitchell (Phillips 66 CFO) and Reinhard Florey (OMV CFO) will share their views on whether 2026 marks a golden year or a (new) golden age for refining.

Majors; Solving for global supply imbalances. EU Oils 2027 FCF yield is currently 10.9% at forward strip $85/bbl Brent. The conference will host keynote fireside discussions with Shell and Saudi Aramco. Shell CEO Wael Sawan will discuss the portfolio construct necessary to best position global majors to capture volatility upside and deliver downside resilience (when required). Aramco CFO Ziad Al-Murshed will explore the company's stand-out capability to deliver 'port in a storm' industry leadership. In Utilities, we look forward to Iberdrola CFO Jose Sainz Armada's perspectives on global growth avenues.

Policy… and geopolitics. The agenda brings expert views on three fronts. Lord Browne will share insights on opportunities and risks associated to an evolving energy paradigm encompassing security, AI and decarbonisation. We will explore next steps on US energy policy with Oliver McPherson-Smith (Energy & Environment, America First Policy Institute) and key considerations for a race to (energy security) resilience with Sarah Kapnick, JPM Global Head of Climate Advisory.

EMEA EPS and valuation. Following 3Q reporting, we make selected model updates to TotalEnergies, Saudi Aramco and Neste. On Aramco, we roll forward our TP to Dec-27, align 2027/28 oil price assumptions to the forward strip and incorporate a higher WACC into the DCF. In aggregate, this modestly lowers the TP 3% to SAR29.

J.P.Morgan

Shell

SHEL LN

OVERWEIGHT

Price Target (Dec-27) :4,200p

Key JPM Research:

Shell PLC: Cash machine; Stay OW

EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

Shell PLC: ARC proforma; Value in the liquids, upside in the gas

Cost efficiency/disposals. Shell has already achieved $5.8bn structural cost reductions by 1H26, halfway through the period to a $5–7bn target by 2028. Does this demonstrate further scope to drive efficiency through Shell is being unlocked the more management explores the opportunity set?

Cash machine, ARC upside; optimal cash return mix into capital markets update

Industry/Operational:

- **ARC – growth proposition.** Where did the transaction stand out to Shell on a risk-adjusted return basis relative to alternatives? What are the next steps for LNG Canada 2 including appropriate mid-term stake and funding structures?
- **ARC – synergy upside.** Looking beyond the initial synergy target, Shell has referred to a multi-year, multi-billion opportunity? What are the principal opportunities and how conditional is that on unlocking the Attachie asset?
- **Liquids production to 2035.** Following ARC and associated portfolio progress (eg: Brazil, Canada Bay du Nord) how does Shell assess the longevity and production outlook to 2035 compared to CMD25 and, at that point, a 350kb/d shortfall?
- **Monetising energy price volatility.** What credentials advantage Shell's portfolio (e.g. global reach, LNG business structure, leased access to shipping) to best optimise energy market volatility if price dislocations persist into 2027?
- **Chemicals restructuring.** Media reports in late summer suggested a potential sale of the US assets. What restructuring progress has been made to date and how is Shell currently evaluating the optimal way forward, mindful of the market cycle?
- **Exploration.** To what extent has Shell reset the exploration business and strategy? During half-year reporting, it referenced its most encouraging well to date in Namibia; what is the latest status and next steps?
- **Venezuela.** management have been reported as believing Shell's edge in Venezuela lies in offshore gas linked to Trinidad infrastructure and Atlantic LNG, rather than (heavy) oil. What is necessary to create a broader opportunity through liquids?

Fiscal:

- **Cash return.** Following the buyback uplift to $5bn with 3Q results, how does Shell now evaluate the relative merits of buybacks versus faster DPS growth within its sacrosanct 40-50% CFFO framework?
- **Capital reallocation.** Shell has accelerated capital reallocation initiatives since the ARC transaction; where has the company got to in this journey and does it still see material opportunities to high-grade capital employed and returns excluding chemicals?
- **M&A.** Following ARC and accompanying portfolio high-grading steps, to what extent is further M&A now a value-based option rather than a continued necessity?
- **Capex**. How are management thinking about the appropriate level of capex looking to 2030+ (guidance $20bn-22bn 2025-28)?

Global Equity Research
12 November 2026

J.P.Morgan

TotalEnergies

TTE FP

NEUTRAL

Price Target (Dec-27):€85.0

Key JPM Research:

Valuation and sensitivity screens: U/g BP to OW and d/g TotalEnergies to N

TotalEnergies: Doing what it says on the tin; Extension of O&G growth beyond 2030 achievable but remains a WIP

EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

Refining and freight. Given the volatility of both freight and refining margins, how much of TotalEnergies' overall freight costs are exposed to spot rates?

M&A/US gas. At Investor Day, management reiterated an interest in US upstream acquisitions, including shale gas, as a way to strengthen integration and diversify geopolitical exposure, while noting that current valuations are too high. What scale and type of US gas opportunity would meet the investment bar?

Yamal LNG. Management expect EU import restrictions from January 2027 to lengthen shipping routes and potentially constrain Yamal's exports. How much of TotalEnergies' Yamal-linked volume can be redirected, and what are the implications for LNG portfolio supply and margins?

Upstream growth to 2035; project execution including Middle East; IP FCF inflection, France

Industry/Operational:

- **LT Upstream O&G growth.** September's Investor Day positioned a 2-3% CAGR to 2035 as an ambition with currently identified assets enabling growth to 2032 and flat production 2030-35; what key assumptions are behind the 2-3% including exploration success, the nature of new resource access, underlying decline and maintenance of TotalEnergies' 12-year proven reserve life?
- **Middle East – operational recovery.** What is the operational readiness of the company's Middle East assets were Hormuz to re-open and, in the meantime, what proportion of regional O&G production is able to get to market?
- **Middle East – investment discipline**. Has the prolonged nature of the conflict changed the way the board and management assess incremental investment in the region including necessary hurdle rates?
- **Project execution.** With the projects supporting the >3% annual production-growth target to 2030 now in execution, where are the most significant pressure points in the development pipeline, including Middle East projects and remaining headroom to deliver Mozambique LNG by 2029?
- **Integrated Power.** What are the key drivers to achieve the FCF positive target into 2027 and what upside is the company seeing to date through the EPH assets and transaction?
- **Gas outlook.** With Middle East LNG exports constrained and Europe competing with Asia for supply, how do management now view the global gas/LNG supply & demand outlook for the coming years? And how does that inform management of LNG pricing exposures?
- **Namibia – Venus & Mopane.** What factors are holding up an FID of the Venus asset? At Mopane, what are next drilling and appraisal milestones?

Fiscal:

- **Capex.** The Investor Day revised the capex range from $14bn-16bn pa to $14bn-17bn pa to 2032; what should be considered as the base case spending profile for the coming years?
- **Cash return.** With buybacks of $2.5bn for both 4Q26 and 1Q27, how should investors best think about the distribution framework from here including any element of counter-cyclicality within the >40% CFFO payout policy (e.g. vs. a ~50% payout in 2025)? How was the 5%+ pa dividend growth target established?
- **France/EU.** The French govt. has no direct stake or golden share in TotalEnergies. What is the capital employed in France, and how much profit does the business generate there? What has been the monetary impact of the policy to cap French pump prices in recent months? Does the company currently believe this 'self-tax' initiative is sufficient to mitigate further tax risk if energy prices remain elevated?

J.P.Morgan

Saudi Aramco

ARAMCO.AB

OVERWEIGHT

Price Target (Dec-27): SAR 29.0

Key JPM Research:

Saudi Arabia: From Vision to Execution: Pulse Check on Saudi Infrastructure Cycle

EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

MENA Equities: Positioning amidst persisting geopolitical uncertainty and emerging opportunities

Operational flexibility; East-West pipeline led infrastructure expansion; dividend upside

Industry/Operational:

- **Operational flexibility.** How quickly can the company restore crude production to OPEC quota (10.5mb/d) and MSC (12mb/d) levels respectively if Hormuz were to stabilise?
- **Emergency response.** Aramco has stated its capabilities have been externally benchmarked at 6x faster than industry standard. What are the key enablers of this?
- **East-West pipeline expansion.** During 3Q results, the company confirmed that preliminary engineering is already underway and the KSA oil ministry has referred to 10mb/d (current liquids capacity 7mb/d). What are the potential timelines and funding structures? To what degree do West Coast port facilities need to be further built out and are there any constraints to that?
- **Project delivery.** How has Aramco kept its oil and gas growth plans to 2030 on-track despite this year's regional disruption? Which project milestones remain most critical?
- **Global oil demand resilience**. Given Aramco's status as the oil industry's leading exporter, what are management's latest perspectives on the strength of global customer nominations, including insights on the outlook in Asia/China?
- **Gas growth strategy**. Aramco's gas production growth target is more than 80% by 2030; what kind of returns does Aramco anticipate from this investment and can you explain the liquids-related value upside from oil/gas switching in-Kingdom?

Fiscal:

- **FCF growth.** Underlying cashflow growth targets remain on track to 2030 despite this year's regional disruption. What are the key targets and which factors have supported ongoing delivery during recent months?
- **Capex outlook.**The recent budget has been $50bn-55bn pa and positioned as peaking around mid-decade. How should investors think about the budget from here, including how the merits of renewed investment in infrastructure diversification could affect the outlook?
- **Dividend policy.** If oil prices stay high, what potential does Aramco see to reactivate performance-linked dividends in 2027, based on FY26 free cash flow?

J.P.Morgan

Equinor ASA

EQNR NO

UNDERWEIGHT
Price Target (Dec-27): Nkr400

Key JPM Research:
Equinor ASA: Squeezing more out of Norway...but EU gas remains the key driver

Namibia. Equinor entered the Orange Basin in August by acquiring a 17.4% stake in PEL 90. When are the well results expected? If it succeeds, is there scope for deeper exposure, given Equinor's offshore expertise?

EU gas tightness into and beyond winter; 2027+ capital allocation including M&A optionality, Orsted next steps

Industry/Operational:

- **EU gas market outlook**. EU gas is a key value driver for Equinor. (i) With storage entering winter 2026/27 below its five-year average, what is management's outlook for winter 26/27 and the 2027 refill season? (ii) What are the company's latest views on EU industrial demand trends?
- **Ørsted.** Equinor has previously highlighted the merits of a closer relationship with Ørsted. What events or scenarios could lead the company to deepen those ties?
- **Johan Sverdrup.** The 2026 decline is guided at 10-20%. (i) Where is the field tracking within that range, and what is doing most of the work to offset the decline? (ii) How should investors think about the decline rate in 2027-28, and how much will Phase 3 at end-2027 flatten the curve?
- **MMP** has delivered EBIT of around $800m-900m per quarter, above the $400m guidance level. If EU gas stays tight and volatile, how much room is there to beat the top of the range?
- **Empire Wind.** What is the latest on development progress? Is a farm-down of the ownership still an objective? If so, what milestones are needed to make a transaction more feasible?
- **International E&P. (i)** 2030 production increased to 2.3mboe/d with the CMU, what is the major MT growth engine and which key projects are driving this high-grading? **(ii)** Beyond 2030, what are the growth objectives, and what is the optimal breadth of the portfolio?

Fiscal:

- **M&A and NCS consolidation: (i)** Beyond 2030, how important is M&A as a strategic lever to sustain the production base? **(ii)** Is there scope to consolidate the NCS further, capturing synergies and extending the life of the portfolio? **(iii)** How supportive are international market conditions for M&A-led growth at this stage?
- **Cash return.**The buyback policy is $2bn-4bn pa at $60-80/bbl Brent and $7-11/mmbtu EU gas. Outside this range, buybacks will change non-linearly. How would Equinor approach distributions if commodity prices stay well above these bands?
- **Capex.** Mid-term capex guidance is $11bn-13bn and and with the 2027 budget raised by $1bn to $12bn (ex-EW). What scope does Equinor see to use cash generated during periods of higher prices to accelerate investment in its MT strategy? What are the constraints to doing so (e.g. engineering capacity and risk of provoking inflation)?
- **Gearing.** Equinor de-emphasized its previous 15-30% ND/CE ratio as a specific target during this year's CMD, why and how should investors now best think about how the balance sheet will be managed?

J.P.Morgan

ENI

ENI IM
OVERWEIGHT
Price Target (Dec-27): €28.0

Key JPM Research:

Eni: Another strong quarter – 3Q commodity leverage. operations and special div upside

EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

ENI: Management Feedback – Upstream value differentiators increasingly durable; Stay OW

ENI: CEO Feedback – More growth, diversification and value; Stay OW

Technology and Supercomputing. Eni ranks inside the global Top 10 for supercomputing capacity; how is that positively supporting the business?

Chems/Versalis. How is the Chems transformation progressing? What are the key remaining steps required to reach EBIT breakeven in 2027 and FCF breakeven in 2028, and to what extent does delivery depend on self-help versus a recovery in the wider European chemicals cycle?

Upstream growth to and beyond 2030; satellite model; Venezuela opportunity set

Industrial/Operational:

- **E&P growth upside.** Eni has raised FY26 underlying production growth to 6-7% and moved its 2030 CAGR to the top of a 3-4% range. What factors enabled the 2030 upgrade so soon after this year's CMD? How confident is the company in having the necessary inventory to extend this type of growth rate to 2035?
- **Exploration.** Eni has a strong exploration track record. What are the main sources of this expertise, and what does the exploration pipeline look like into 2027?
- **Speed to market.** Eni's average time from discovery to first production is under 4.5 years, 1.5+ years faster than the industry average. To what extent is the organisational model the key enabler; for example, integrating exploration with development and keeping technical expertise in-house?
- **GGP.** If a tighter European gas market keeps TTF prices higher and more volatile, how much of that upside can GGP capture, and through which levers?
- **Venezuela.** Eni started operations at Junín-5 less than two months after signing the new production contract, with a target of 200 kb/d from Phase 1 by 2028. (i) What are the key milestones and risks on the path to 200 kb/d? (ii) How does Eni think about structuring the investment in a way that best manages the capital employed build?
- **Satellite model.** What is Eni's strategic rationale behind the satellite model approach and what determines the areas of the business it is applied to? To what extent are minority IPOs still core to the strategic agenda, e.g. Enilive and Plenitude, or is there a case that private capital has proven a more compelling source of partnership/fundraising?
- **Asia E&P.** Searah currently produces ~350 kboe/d and targets substantial growth to 2030 (500kboe/d in 3Y and 3bn boe resource upside). What are the next key milestones to unlocking that potential?

Fiscal:

- **Cash return.** The €3.8bn buyback and €1.3bn special dividend demonstrate how the distribution framework works when CFFO surprises positively. How should investors think about Eni's continued intent to distribute and buy back shares at the prevailing share price?
- **Deleveraging/Disposals.**Gearing is expected to reach the low end of the 10-15% range by year end. What do management see as the optimal through-cycle leverage range? If the balance sheet were restated on a pro-forma basis, where would all-in gearing sit?
- **Italy and tax risk.** Eni has capped fuel prices in Italy since late September at an estimated cost of a few hundred million euros per quarter. Do management believe this is enough to manage windfall tax risk if commodity prices stay high?

Global Equity Research
12 November 2026

J.P.Morgan

Repsol

REP SM

NEUTRAL

Price Target (Dec-27): €27.0

Key JPM Research:

EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

Dissecting the pinch points in refining and jet fuel; Europe in reverse

UK North Sea – NEO NEXT+. Following the integration of TotalEnergies' UK assets into NEO NEXT+, does the entity have further appetite to consolidate in the basin? If not, what are the next value creation steps for the business?

Refining outlook into 2027; Alaska and Venezuela potential; Windfall taxes and cash return frame

Industry/Operational:

- **Refining outlook.** How have margins trended so far in Q4 and what is the latest view on the margin environment into 2027? How far do the industry maintenance backlog and inventory rebuild point to lasting tightness in refined product markets?
- **Refining margins/premium & freight.** Margin premia have been at historical records in recent quarters; can you summarize the key supporting drivers of Repsol's system? What is the impact of higher freight costs both on Repsol's indicator margin and margin premium?
- **Venezuela.** As one of the few incumbent IOCs in Venezuela, Repsol aims to raise its production there by 50% within a year and triple it within three years. (i) What is the medium-term production potential across the portfolio, and how confident are management in the recoverability of receivables given the current cargo-based payment structure? (ii) How can investment be structured to best optimise payback periods?
- **E&P liquidity event**. Management indicated no urgency to change the structure of the E&P vehicle. Is EIG fully aligned with Repsol and has a liquidity event for the E&P business become more of an option than a necessity, given the high-grading opportunities now emerging, including in Venezuela?
- **Alaska E&P.** Pikka Phase 1 reached 69 kb/d gross by end-September, nearing its 80 kb/d plateau, with Phase 2 expected to add a further 40 kb/d by 2030. Management flagged optimism on further upside during 1H reporting. What are the key opportunities in the Alaskan asset base beyond Phase 2, including the Horseshoe/ Stirrup appraisal?

Fiscal:

- **Cash return.**With Q3 results, Repsol announced a third buyback of €950m, taking FY26 buybacks to €1.8bn and total distributions to €3bn. That sits at the lower end of the 30-40% CFFO payout range, despite strong cash generation. Should investors expect Repsol to be countercyclical against the refining cycle from here (i.e. staying towards the lower end, while margins are elevated and holding the upper end in a downturn)?
- **Energy windfall taxes in Spain.** What are the latest debates and expectations around windfall taxes in Spain, particularly if energy prices remain elevated through year-end?
- **Capital allocation and M&A.** Management have indicated a preference to avoid being procyclical and to prioritise reducing breakevens over acquisitions. Could 2026's standout CFFO generation alter Repsol's future capex framework; for example, identifying opportunities to accelerate mid-term strategic objectives through higher 2027+ investment?

OMV

OMV AV

UNDERWEIGHT
Price Target (Dec-27): €63.0

Key JPM Research:
EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

Dissecting the pinch points in refining and jet fuel; Europe in reverse

BGI next steps. In March, OMV and ADNOC agreed to defer the targeted timing of BGI's ADX listing to 2027, subject to market conditions. Is this still a feasible base case and what conditions would need to be in place to go ahead? How would a scenario of further delays affect BGI's funding plans and its ability to meet the dividend floor to OMV and XRG going forward?

Chems outlook; New CEO growth agenda, Neptun gas

Industry/Operational:

- **Chems outlook.** (i) How does OMV see the market outlook including margin trends into 2027 and MT, and how much of the recent improvement is disruption-led rather than structural?
- **BGI.** Limited feedstock availability weighted on BGI performance in 3Q. Has the feedstock constraint been fully resolved, and what is the latest on asset availability and utilisation across BGI? Which indicators does OMV see as key to track for its performance?
- **Refining outlook.** The 3Q refining margins more than tripled y/y, and FY26 guidance was raised to ~$25/bbl. (i) What is OMV's view on diesel-led refining strength through year-end and into 2027, and what would drive normalisation? (ii) Management flagged no turnarounds in 4Q and only a minor tank incident at Schwechat; how does refinery availability look into 2027?
- **Freight rates.** What share of OMV's crude and product logistics is exposed to spot freight rates, and how sensitive is the realised refining margin to them?
- **Upstream – Neptun Deep.** The project is around 90% complete, with first gas targeted for 1H27 and around €0.5bn pa EBIT contribution expected at plateau. What are the key remaining milestones and execution risks? How sensitive is the €0.5bn contribution to the mix of exports and domestic marketing?
- **Upstream – Middle East.** 9M Sales volumes were lower than production mainly due to the Middle East underlift. 3Q presentation confirmed there was no cargo lifted in October. What is the latest on lifting conditions, and once lifting resumes, over what timeframe can the accumulated underlift realistically be recovered? What cash flow uplift should investors expect?
- **New CEO and strategy**. What are new CEO Emma Delaney's priorities for the coming years and which strengths and gaps in the portfolio have stood out in her first few months? When might investors expect an updated strategic view?

Fiscal:

- **CFFO growth**. What are the key attributes and expected growth trajectory behind OMV's target of growing CFFO from €4.3bn to >$6bn by 2030 at Brent $75/bbl, EU gas €25. To what extent does a progressive recovery in the chemicals market over the next 2-3 years contribute to it?
- **Cash return.** Given the strength of cash flow and a largely de-risked balance sheet this year, is there merit in OMV putting forward an additional, ring-fenced dividend payment for FY26 funded from its own cash generation, to offset for shareholders the shortfall from BGI's reduced distribution?
- **Windfall taxes**. Q3 solidarity contributions of around €200m in Austria and Romania will mostly be paid in cash in 2027. How do the underlying schemes work, and how likely are extensions?

Galp

GALP PL

OVERWEIGHT
Price Target (Dec-27): €23.0

Key JPM Research:
Galp Energia: Revisiting the catalyst pipeline after downstream M&A ends in disappointment

EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

Dissecting the pinch points in refining and jet fuel; Europe in reverse

Mozambique LNG. Galp filed an international arbitration case in the summer regarding a capital gains tax dispute related to its past asset divestment; what's the latest status and associated risks?

Merits of a partnership model; next steps in Namibia, Brazil tax and growth

Industry/Operational:

- **Downstream partnership.** Has the unsuccessful process with Moeve enhanced or diminished Galp's perception of the value-based merit of partnership structures for its downstream business? Where does the value upside reside and what would an alternate future counterparty need to offer above-and-beyond Moeve?
- **Namibia.** What are the next steps for Galp in the region and how will the carry show up in Galp's reported capex and cash flow? With some more time now behind us, looking back on the transaction with TotalEnergies, how does Galp reflect on it?
- **Namibia – Resource upside beyond first development.** Given TotalEnergies carry only extends to Mopane's first development, to what extent is Galp's 10bn boe gross-in-place estimate recognised by the deal structure and how should investors now assess the recoverability & value of prospective barrels beyond first development?
- **Renewables partnership.** Having invested in wind assets through 2026; What evidence has Galp seen that recent deals make the portfolio more attractive to potential partners by adding scale and solar/wind diversification?
- **Refining – margins and hedging.** After refining cashflow has been limited this year by a 35% hedge ratio (at $8/bbl), what is the hedging position 2027+? Looking forward, as Galp's asset/cashflow base grows, why should it deploy hedging at all?
- **Venture Global arbitration success.** Galp reportedly had a successful outcome on VG arbitration. What is the potential value and timing/format of receipt?

Fiscal:

- **Cash return.** Do the management still see 1/3 OCF as an appropriate distribution mechanism now that the Moeve deal has fallen away?
- **Windfall taxes.** Following the Portuguese government's approval in July of a temporary 33% windfall tax on excess profits earned by oil companies, what is the estimated financial impact on Galp and its view on the situation?
- **Brazil – Fiscal and regulatory risk**. Brazil remains Galp's core growth engine; what is the cash flow impact of export taxes, and how can it be mitigated?

Neste

NESTE.HE, NESTE FH

NEUTRAL
Price Target (Dec-27): €30.0

Key JPM Research:
EU Oils 'Back to School' Feedback. Faltering inventories hard to ignore; Reiterate OW Eni, Shell, Iberian names over OMV in midcaps

Dissecting the pinch points in refining and jet fuel; Europe in reverse

Operational performance. The past few years have seen challenges across many of the key refineries; what lessons have been taken from this and are there ongoing initiatives to further improve asset integrity going forward?

Performance improvement programme. The programme reached a €697m annualised EBITDA run-rate impact in 3Q, well above its original €350m target. As the programme concludes at year end, how much of the run rate should translate into earnings? Is there scope for further improvement into 2027?

Renewable margin outlook; mid-term refinery utilisation baseline, SAF (still) taxi-ing to take-off

Industry/Operational:

- **Strategic progress.** Neste reset the strategic plan under a new management team last year following a challenging period during 2023/24. How do management assess progress against that plan so far, and where have the principal successes and challenges emerged?
- **Renewable margin outlook and feedstock trend.** Renewable diesel market conditions have strengthened this year, but higher feedstock costs and hedging have weighed on realised margins. How do management see margins and feedstock costs evolving into 2027? What are the key elements within Neste's control to enhance margin delivery?
- **Renewable product sales volumes** for 2026 were guided flat y/y; what is the appropriate utilisation assumption for the existing assets after the Rotterdam and Singapore turnarounds?
- **SAF industry growth and margins**. Management described SAF margins as less attractive than renewable diesel, amid growing Chinese supply and a still-small European mandate. What needs to change for SAF to command a durable margin premium over renewable diesel? How much of the expected demand growth depends on higher mandates rather than voluntary purchases?
- **Rotterdam refinery expansion.** A further budget revision and schedule delays put a renewed focus on project execution. management now target technical start-up by end-27, with commercial ramp-up beginning in early 2028. What remains on the critical path, and what gives management confidence in the revised cost and timing? At the higher capital cost, what utilisation and margin assumptions underpin the project's expected returns?
- **Refinery maintenance.** The duration of announced works at the renewable refineries for 2H in summer was perhaps deeper than the market expected; what should investors expect as a baseline TAR requirement 2027+?
- **Regulation.** What is the latest status of RED III implementation and opportunities does management expect and to what extent could Neste benefit from this?

Fiscal:

- **Balance sheet/Dividend policy**. Leverage has fallen below 25%, providing substantial headroom against Neste's target of below 40%. With the new dividend policy setting a payout of 20-40% of EPS, what will determine where distributions sit within that range?
- **Capital allocation**. With the Rotterdam growth project further delayed to end 2027, what is the expected path for capex into 2027 versus the post-expansion baseline guided at CMD 2025 of €500m pa?

AkerBP

AKRBP NO/AKERBP.OL

NEUTRAL
Price Target (Dec-27): Nkr 322.00

Key JPM Research:

Aker BP: Solid 3Q Delivery, Execution Visibility Improving

European Oil Field Services and Exploration Production: From Volatility to Selectivity: Identifying Resilient Winners in a Shifting Commodity Market

Project Delivery, Portfolio Strategy and Capital Allocation

Industrial/Operational

- **Production ramp-up.** You continue to guide towards approximately 35% production growth between 2026 and 2028. How should investors think about the phasing of that growth, particularly given the mid-2027 start-ups of Yggdrasil and Valhall PWP-Fenris? What are the key factors determining how quickly production can ramp up following first oil?
- **Johan Sverdrup.** With Johan Sverdrup's decline running at approximately 11% in 2026 to date, broadly in line with your expectations, how should investors think about the field's decline trajectory over the next several years? What contribution could Phase 3 and further recovery initiatives make towards mitigating natural decline, and when might these begin to affect the production profile?
- **M&A.** With ConocoPhillips evaluating a potential sale of its Norwegian business, how competitive do you see the market for large producing asset portfolios on the NCS? Are there structural advantages for established operators that could narrow the pool of credible buyers, and what would Aker BP need to see in terms of valuation, resource upside and operational synergies for this transaction to create value?
- **Production sustainability.** You have reiterated confidence in sustaining production around 500kboe/d into the 2030s. How much of that outlook is underpinned by existing producing assets and sanctioned developments versus future projects and exploration success? What are the key development decisions required over the next two to three years to support that production level?
- **Future investment opportunities.** As the current tax-package developments approach completion, how do you see the opportunity set for new investments evolving under the normal Norwegian fiscal regime? Does the higher hurdle for new developments change your appetite for organic growth relative to M&A or shareholder distributions?

Fiscal

- **Dividend path:** With leverage having declined to 0.5x and the major development projects approaching completion, how should investors think about the balance between reinvestment and shareholder distributions beyond 2027? What would need to change for Aker BP to accelerate dividend growth beyond the historical 5% annual increase?
- **Shareholder structure:** Following BP's reduction in its Aker BP stake from 15.9% to 10.9%, do you anticipate any implications for the company's governance or strategic relationship with BP? More broadly, how do you think about the potential evolution of Aker BP's shareholder base and the importance of maintaining a diversified institutional ownership structure?
- **2027 hedging strategy:** With the major development projects approaching start-up in 2027, how are you thinking about commodity price hedging over the next 12–18 months? Given the expected decline in capex and strengthening balance sheet, does the rationale for hedging change as Aker BP transitions from peak investment spending towards higher free cash flow generation?

Var Energi

VAR NO, VAR.OL

OVERWEIGHT
Price Target (Dec-27): Nkr 63.00

Key JPM Research:

3Q26 Takeaways – 4Q Production Ramp on Track, BlueNord Synergies De-Risked, and Higher Returns

European Oil Services and Exploration & Production: 'Back to School' Series Takeaways – Saipem, Aker Solutions, and Var Energi

BlueNord Integration, Production Sustainability and Shareholder Returns

Industrial/Operational

- **Production framework:** With the BlueNord combination increasing your long-term production target to approximately 450kboe/d, how much of that ambition is underpinned by existing production and sanctioned developments versus projects yet to reach FID? What level of incremental production will be required to offset underlying decline through 2030, and how much is dependent on exploration success?
- **2027 production outlook:** Following the reduction in 2026 production guidance to approximately 390kboe/d, what proportion of the anticipated 4Q recovery reflects the reversal of temporary outages versus sustainable contributions from new wells and projects? As we enter 2027, should investors expect the higher 4Q exit rate to be maintained, or could natural decline and planned maintenance offset some of that momentum?
- **Exploration collaboration:** You have indicated that the high-impact exploration collaboration with Equinor and Aker BP should not materially increase overall exploration spending, despite targeting approximately five high-impact wells annually across the partnership from 2028. Does this require a reallocation of spending away from infrastructure-led exploration, and could that affect the pace of near-term reserve replacement and short-cycle development opportunities?
- **M&A:** With ConocoPhillips evaluating a potential sale of its Norwegian business, how competitive do you expect the market for a producing portfolio of this scale to be, particularly among existing NCS operators? Would a transaction of this scale be compatible with your capital allocation priorities following BlueNord?

Fiscal

- **Dividend sustainability:** With the ordinary quarterly dividend now at $350m and an additional $50m extraordinary distribution announced for both 3Q and 4Q, what level of normalized commodity prices and after-tax cash flow would be required to sustain the current ordinary dividend? What would need to change for the extraordinary component to become part of the recurring dividend rather than remain discretionary?
- **Capital efficiency / Free cash flow:** You have outlined $8–13bn of free cash flow generation over 2026–2032 and a combined portfolio free cash flow breakeven of approximately $40/bbl. What level of annual reinvestment is required to sustain production around 450kboe/d, and how sensitive is the free cash flow outlook to the pace of project sanctioning? Does the addition of BlueNord's lower-decline assets materially reduce the capital intensity of sustaining group production?
- **Operating costs:** With 2026 production cost guidance increased to approximately $11/boe, including ~$0.50/boe of FX impact, what proportion of the anticipated improvement in unit costs as production increases will come from operating leverage versus reductions in absolute costs? What are the principal assumptions underpinning the combined company's long-term $10–11/boe cost target?

Harbour Energy

HBR LN

NEUTRAL
Price Target (Dec-27): 280.00p

Key JPM Research:

Harbour Energy: From Framework to Delivery; Returns in Focus

Shareholder structure / Overhang: With BASF's ownership having declined from approximately 47% at the beginning of the year to 16% at the end of September, and the one-year lock-up on 70% of the shares issued in the LLOG acquisition expiring in February 2027, how do you see Harbour's shareholder base evolving? Given the recent directed buyback from BASF, would you consider further targeted repurchases to facilitate shareholder exits, or is maximizing free float and institutional liquidity now the greater priority?

Production Sustainability, Portfolio Growth, Capital Allocation

Industrial/Operational

- **Production and portfolio mix,** With 2026 production guidance upgraded to 500–505kboepd and the medium-term target remaining 475–500kboepd through 2030, how much UK production decline is embedded in that outlook, and what incremental contribution is required from the US, Norway and Argentina to offset it? At constant commodity prices, how much improvement in cash flow margins could the shift towards lower-cost and lower-tax production deliver?
- **LLOG production growth.** With a second US drilling rig now deployed, Who Dat East approved and recent wells outperforming expectations, what are the key milestones underpinning the targeted increase in US production to 65–70kboepd by 2028? How much of that growth is supported by sanctioned developments versus future drilling decisions, and could the additional rig capacity accelerate the production trajectory?
- **UK / Waldorf.** Following the completion of Waldorf and the integration of its approximately 14kboepd of production, how much incremental recurring free cash flow do you expect from the enlarged UK portfolio, excluding the one-off cash release associated with the transaction? To what extent can operational synergies, infrastructure optimization and selective investment extend the cash-generative life of the UK business despite declining production?
- **Mexico / Zama and Kan.** With Zama and Kan both targeting FID-readiness around year-end 2027, and the Lakam Ha FPSO MOU and major FEED tenders progressing at Zama, what are the remaining commercial and technical hurdles to sanction? Given the competing short-cycle investment opportunities in the US and Norway, what project economics and capital commitments would be required for Mexico to secure a meaningful allocation of Harbour's investment budget?

Fiscal:

- **FCF resilience.** With 2026 FCF guidance upgraded by $800m to ~$2.6B, how much of the improvement reflects structural portfolio enhancements from LLOG and Waldorf versus stronger commodity prices? At constant commodity prices, what are the principal drivers of incremental FCF into 2027, and to what extent could higher cash tax payments offset the benefits of growing higher-margin production?
- **Capital allocation.** As capital spending shifts towards the US and Argentina, how much flexibility remains within the $2.0–2.3bn annual investment framework to accelerate development without compromising distributions?
- **Shareholder returns.** With the 2026 FCF outlook supporting at least $1.2bn of distributions, including $550m of announced buybacks, what will determine the allocation of the remaining shareholder returns between further repurchases and cash dividends? Given the reduction in BASF's ownership and the potential for further changes in the shareholder base, does the relative attractiveness of buybacks change as liquidity improves?

EnQuest

ENQ LN/ENQ.L

OVERWEIGHT

Price Target (Dec-27): 35.00p

Key JPM Research:

EnQuest: Proposed Malaysia Acquisition Lays the Foundation for a New EnQuest

Hedging / Cash flow protection: With approximately 3.6MMbbl of 2027 production hedged through swaps at an average price of $64.4/bbl, how do you expect the enlarged portfolio to influence your approach to hedging? As Malaysia increases the contribution from gas and production sharing contracts, would you expect to maintain a similar level of price protection or retain greater exposure to commodity price upside?

Malaysia Integration, Production Sustainability and Capital Allocation

Industrial/Operational:

- **Malaysia integration:** With all conditions precedent satisfied and completion of the Malaysian acquisitions on 31 Dec, what are the remaining operational milestones ahead of the transfer of operatorship? Given the scale of the acquired portfolio, what assumptions around production efficiency, operating costs and well intervention activity underpin your expectations for the first year under EnQuest operatorship?
- **Malaysia capital intensity:** The acquired Malaysian assets have ~$170m of remaining 2P life-of-field capex, with unit operating costs of around $10/boe. How much incremental capital will be required beyond the existing 2P development plan to maintain production and unlock the identified resource upside? Should investors expect the acquired portfolio to remain structurally less capital-intensive than EnQuest's legacy assets as additional development opportunities progress?
- **Balingian development:** The Malaysia acquisition includes up to $90m of contingent consideration linked to FIDs on three projects within the Balingian PSC. What are the key milestones required to progress these developments towards sanction, and how do their expected returns compare with other opportunities in the enlarged portfolio?
- **Magnus / Production reliability:** Following the third-party infrastructure outage that reduced 1H26 production by approximately 4.1kboe/d, how much of this exposure will be eliminated by the planned Ninian Bypass Project in 2027? With the six-well drilling programme also underway, what incremental production could Magnus deliver as infrastructure reliability improves, and how much of this is already reflected in the medium-term production outlook?

Fiscal:

- **FCF generation:** With the Malaysia acquisition expected to materially increase cash generation from 2027, what level of sustainable annual free cash flow could the enlarged portfolio generate before discretionary growth investment? How much of the improvement is attributable to lower operating costs and reduced sustaining capex versus the increase in production, and what are the principal sensitivities to commodity prices and production performance?
- **Capital allocation:** With the acquisition expected to increase pro forma leverage to approximately 1.1x on the previously disclosed basis, how will you prioritise deleveraging, organic investment and shareholder distributions as the enlarged portfolio begins generating cash flow? Given the relatively low capital requirements of the acquired 2P production base, what leverage or liquidity thresholds would need to be reached before materially increasing shareholder returns?
- **M&A strategy:** Following the Malaysian acquisition, how are you evaluating further opportunities across Southeast Asia and the UK North Sea? Does the increased scale and cash generation of the enlarged business provide scope for another material acquisition, or will the priority shift towards integrating the Malaysian portfolio and converting the existing resource base into production?

Price Target (Dec-27): Nkr 43.00

Key JPM Research:

Aker Solutions: 2027 Revenue Outlook Below Expectations, but Margins Hold; OneSubsea Remains Solid

SLB OneSubsea Value Realization, 2027 Earnings Outlook and Capital Allocation

Industry/Operational

- **OneSubsea value recognition:** Given the increasing contribution of OneSubsea to group earnings and cash generation, does the current ownership structure allow the market to fully recognize the value of AKSO's 20% interest? Beyond a potential monetization, could greater financial disclosure, a more explicit distribution framework, or other measures help investors better assess the value of the holding?
- **2027 revenue visibility:** With revenue expected to decline from NOK 53–55bn in 2026 to NOK 35–40bn in 2027, against approximately NOK 24bn of secured backlog scheduled for execution next year, how much of the remaining NOK 11–16bn revenue requirement is supported by expected call-offs under existing framework agreements and project variations versus contracts yet to be awarded? Where is the greatest uncertainty in bridging that gap?
- **Legacy lump-sum projects:** With additional costs recognized in 3Q due to the extended offshore phase of the remaining legacy renewables projects, what residual financial exposure remains before completion? How much of the expected 2027 margin is still affected by these projects, and could resolution of the outstanding commercial discussions result in meaningful recoveries?
- **Life Cycle backlog conversion:** With NOK 40bn of secured Life Cycle backlog, increasing to approximately NOK 80bn including options, what proportion of the option backlog would you expect to convert into firm orders? Given the decline in electrification activity, what level of recurring annual revenue could the existing framework agreements support beyond 2027, and how material could the recent BP UK agreement become?

Fiscal:

- **2027 margins and profitability:** Despite the ~30% reduction in revenue expected for 2027, you continue to guide for EBITDA margins of 7–8%, ex. SLB OneSubsea. How much of this resilience reflects the lower procurement content of the remaining portfolio and planned cost reductions versus completion-related incentives and contingency releases? Excluding potentially non-recurring benefits, what underlying margin could the business sustain on a NOK 35–40bn revenue base?
- **SLB OneSubsea dividend policy:** With OneSubsea expected to distribute ~$400m to shareholders in 2026, broadly in line with 2025, and its order book supporting renewed growth from 2027, what would be required to establish a more predictable dividend cadence? Could the JV move towards a formal payout policy or minimum recurring distribution, allowing investors to better assess the sustainable cash returns attributable to AKSO's 20% stake?
- **Cash flow and working capital:** With working capital expected to normalize towards negative NOK 4–6bn over time, how much of that adjustment could occur during 2027 as the major EPC projects conclude? How should investors distinguish between the recurring cash generation of the smaller business and the potential cash outflow from unwinding project-related working capital?

Saipem

SPM IM/SPMI.MI

OVERWEIGHT

Price Target (Dec-27): €5.95

Key JPM Research:

European Oil Services and Exploration & Production: 'Back to School' Series Takeaways – Saipem, Aker Solutions, and Var Energi

Oil Services: Subsea Deep Dive: More Runway Below the Surface

Execution, Margin Recovery and Saipem7 Value Creation

Industrial/Operational

- **Middle East cost recovery.** You incurred approximately €70m of incremental conflict-related costs in 1H26 and assumed a similar amount in 2H, with management previously indicating that recovering approximately half would represent a satisfactory outcome. How have negotiations with customers progressed, and how much of the total cost exposure could realistically be recovered through variation orders? Should investors expect the principal financial benefit to emerge in 2027, and could any recoveries meaningfully improve reported EBITDA?
- **Offshore Drilling.** Following the completion of the shallow-water drilling disposal and the maintenance campaigns brought forward into 2026, the retained deepwater fleet is expected to be highly utilized in 2027. How much of the anticipated earnings recovery is underpinned by improved utilization versus changes in day rates? With limited planned maintenance next year, what level of EBITDA profitability could the remaining fleet sustainably achieve?
- **Energy Carriers recovery.** With legacy projects approaching completion and management expecting a material improvement in profitability from 2027, what proportion of the segment's backlog remains exposed to low-margin contracts? Could EBITDA margins recover towards mid-single digits during 2027, or will the transition extend into 2028? How much incremental EBITDA could the segment generate once the legacy portfolio has fully rolled off?
- **Saipem7 merger approvals.** Following Brazil's conditional approval and the commitment to divest Seven Borealis, what are the principal remaining regulatory milestones before completion? Could further remedies in Europe or Australia affect the combined group's vessel capacity or anticipated synergies, and which capabilities would be most important to preserve?

Fiscal

- **ABS margin trajectory:** With underlying Asset Based Services EBITDA margins reaching approximately 17% in 1H26 excluding Middle East disruption costs, how much additional margin improvement could come from the conversion of more recently awarded contracts? Given construction fleet utilization is already high, is the next leg of margin expansion primarily dependent on better project economics and execution efficiencies, or should investors expect margins to stabilize as utilization approaches capacity?
- **Saipem7 synergies:** Beyond the €300m annual cost and capex synergy target, how much additional earnings potential could come from improving fleet utilization and reducing mobilization costs across the combined portfolio?
- **Capital allocation and balance sheet:** As Saipem transitions towards an investment-grade balance sheet and prepares for the combination, what level of liquidity and leverage do you consider appropriate for the enlarged business? With the expected improvement in cash generation and greater flexibility to optimize fleet investment, would excess capital primarily be directed towards shareholder distributions, selective organic investments or further balance sheet strengthening?

SUBC NO/ SU BC.OL

NEUTRAL

Price Target (Dec-27): Nkr 367.00

Key JPM Research:

Subsea 7: Margin Improvement Continues, with Further Support for Durability

Oil Services: Subsea Deep Dive: More Runway Below the Surface

OneSubsea strategic ownership: With Subsea7 holding a 10% stake in SLB OneSubsea, how does the Saipem combination affect the strategic rationale for retaining that interest? Could the enlarged group seek to deepen its commercial relationship with OneSubsea, or does the combination create an opportunity to reassess the ownership structure and the capital allocated to the JV?

Backlog Quality, Sustainable Margins, Saipem7 Value Creation

Industrial/Operational

- **Subsea pricing and contract economics:** You have highlighted continued improvements in pricing, contractual terms and risk allocation on new awards, including the Goliat Gas Export project. Are recently secured contracts expected to generate materially higher margins than those currently being executed, or is much of that improvement already reflected in existing profitability? As vessel capacity remains constrained, where do you see the greatest scope for further improvement in project economics?
- **Fleet utilization and capacity:** With utilization already elevated across the Subsea & Conventional fleet, how much additional earnings growth can realistically be generated through better vessel sequencing and operational efficiencies? Are there particular vessel classes or regions where capacity constraints are beginning to limit your ability to capture attractive opportunities, and could the next phase of growth require incremental fleet investment?
- **Renewables outlook:** You highlighted a potential slowdown in offshore wind activity during 2028–2029 despite improving project economics and recent strong margin performance. How much of the expected 2027–2029 revenue base is already secured, and could the timing of UK AR7/AR8 project awards materially change the outlook? With the current backlog benefiting from improved contract structures, how sustainable are recent margins as the business transitions towards the next generation of projects?

Fiscal

- **Subsea & Conventional margin sustainability:** With EBITDA margins reaching 26% in 2Q26, supported by high utilization and improving contract quality, how much of the uplift from higher-priced contracts is already reflected in current profitability versus still to come as newer backlog converts? Could the portfolio support further margin expansion through 2027–2029 even without another increase in vessel utilization, and what would be the principal risks to sustaining margins at current levels?
- **Cash generation and capital intensity:** With strong backlog visibility and improving project profitability supporting cash generation, what level of underlying free cash flow conversion should investors expect through 2027–2029? How much incremental investment will be required to sustain fleet competitiveness as utilization remains elevated, and could improved project economics and scheduling efficiencies structurally increase free cash flow conversion?
- **Saipem7 synergies:** Beyond the targeted €300m of annual cost and capex synergies, where do you see the greatest potential for additional value creation from combining the two offshore fleets? Given the standalone improvements already achieved through portfolio-wide scheduling and vessel optimization, how much incremental benefit could come from reducing transit times, improving geographic positioning and increasing the capacity to execute projects without proportionate capital investment?

NEUTRAL

Price Target (Dec-27): €35.00

Key JPM Research:

Technip Energies: Downgrading to Neutral as Limited Near-Term Visibility Tempers Risk/Reward

Backlog Conversion, Margin Recovery, and TPS Growth

Industrial/Operational

- **Qatar NFS execution risk:** With NFS now the principal project exposed to restrictions on large-equipment deliveries through the Strait of Hormuz, what are the critical milestones for securing the necessary shipments in 2027? At what point could further delays begin to affect the project's critical path, and would the principal impact be a deferral of revenue and earnings into subsequent years or additional execution costs?
- **Middle East cost recovery:** With agreements secured in the UAE and Oman and Qatar progressing towards the substantiation and recovery of claims, how much of the incremental costs incurred to date has been recovered versus remaining outstanding? Given the longer timelines associated with productivity losses and extensions of time, could settlements provide a meaningful incremental earnings contribution in 2027–2028, or should investors primarily view these as restoring the original project economics?
- **LNG order outlook and competitive dynamics:** Following more than €14bn of order intake in 9M26, what are the principal opportunities that could replenish Project Delivery backlog for execution beyond 2028? With Chinese contractors increasingly targeting floating LNG and equipment providers expanding into integrated solutions, are you seeing any change in pricing discipline or contractual risk allocation on new tenders, and could this affect the margins achievable on the next generation of projects?
- **TPS medium-term earnings potential:** With TPS generating €216m of EBITDA in 9M26 and management targeting an equal EBITDA contribution from TPS and Project Delivery over time, what scale of organic earnings growth is achievable from the existing portfolio? What are the principal drivers of that growth across technology licensing, equipment and services, and how much additional contribution could come from AM&C integration and further acquisitions?

Fiscal

- **Project Delivery margin trajectory:** With Project Delivery margins recovering to 7% in 3Q, but new project ramp-ups expected to dilute the mix in 2027, how should investors think about the progression of margins through 2028–2029 as these projects mature? Is a return towards the historical 8% margin level primarily dependent on normalisation in the Middle East, or could the mix and execution economics of the newly awarded portfolio support a structurally higher margin over time?
- **2028 EBITDA ambition:** With the company reiterating its ambition to deliver more than €800m of EBITDA by 2028, how much of that target is underpinned by the existing Project Delivery backlog and current TPS portfolio versus assumptions for further order intake and organic growth? Where do you see the greatest potential for performance to exceed this ambition, particularly as recent LNG awards progress towards higher-margin execution phases?

ADNOC Drilling

ADNOCDRI UH

OVERWEIGHT

Price Target (Dec-27): Dh6.02

Key JPM Research:

ADNOC Drilling: Q3 First Take: Another solid quarter, USD 175m special dividend, 2027 guidance for flat net income, OFS to broaden offer

- At Q3, you gave the market a strategic update – as it relates to drilling, you announced you would be targeting 200 rigs in the long-term from 172 currently. Could you help us with a bridge and the phasing? Do you see further upside potential to this 200?
- You mentioned at Q3 that Phase 2 for the unconventional program would largely commence in FY27. At ADIPEC, ADNOC also confirmed it has taken FID on the Ruwais Diyab unconventional project, which is expected to deliver 345mmcfd of raw gas from 2029. Can you help us understand how to think about Diyab in the context of Phase 2 and how we should think about the activity that ADNOC Drilling can pick up with its existing fleet vs new rigs?
- On the Additional Services piece of your strategy – could you give us a bit more colour on what you see as the major drivers of this and perhaps quantify them? Where do you think you might have the strongest competitive advantage? If most of this will be done via partnerships, will this predominantly be local partners? Why would companies partner with you and not go for 100% of the opportunity?
- On Additional Services – you mentioned that in the longer-term we could perhaps expect margins to reach levels similar to current OFS margins – what might the cash flow profile of these new services look like?
- On conventional IDS rigs – do you have a longer-term target for the number of conventional IDS rigs, and would most additional IDS rigs come from converting rigs on which you currently do discrete services into IDS rigs or on new rigs? Can you help us understand what makes a rig more suited to IDS vs discrete services?
- Drilling down into the drivers of conventional OFS growth – would you expect more incremental conventional OFS revenue to come from doing more work per rig or more rigs?
- You recently announced that you won a tender from Kuwait Oil Company for two offshore jack-ups on solid day-rates. One of these was a bareboat rig; what made this the right fit for Kuwait and could this model be suitable elsewhere – in the UAE or internationally?
- At Q3, you announced a special dividend. Near-term capex is likely to be elevated, but how does the board think about discretionary distributions – does it look mainly at that year's FCF or at cash generation and leverage over a longer period?

J.P.Morgan

Centrica

CNA LN/CNA.L

OVERWEIGHT

Price Target (Dec-27): 227.00p

Key JPM Research:

Centrica: Rewiring deserves a Re-Rating

Centrica: Well positioned to benefit from volatile backdrop – remain OW

Centrica: Investment acceleration continues – remain OW

Centrica: 19% TSR at 13x FY27E earnings with an underlevered balance sheet – we stay OW

Centrica: Musing beyond the risks – remain OW, add to Analyst Focus List

Industrial/Operational:

- **Medium-term earnings.** Can you provide some colour on how you see earnings developing in the medium term? You guide to delivering £2bn in EBITDA by 2030 – can you help with the building blocks of this from 2025/2026?
- **Household retail.** How has the energy market evolved with the recent spike in commodity prices? Has there been a change in competition after Ovo was acquired? How do you see your cost to serve compared to your peers? Do you think your customer book will remain stable in the coming years, or even grow? Would you be willing to acquire a customer book? What is the impact of growing bad debt? Do you see yourselves continuing to be industry leaders in the bad debt space?
- **Commodity exposure.** You are a company with large retail businesses, but you plan to keep exposure to wholesale operations in power and gas, including LNG. Can you discuss what your net exposure to higher commodity prices is beyond the short-term moves and how this may change in the next few years?
- **Sizewell C.** Can you provide details on how you settled on a 15% stake in Sizewell C, and what is the outlook and timeline for this investment? Considering your £1.3bn investment, net of the cash yield, results in £500mn, how should we think about the additional use of cash beyond the nuclear transaction? In the event of a significant cost overrun and delay, what is your high-level view on the RoE you would achieve?
- **Capex.** How should we think about annual capital investment in the newly restructured Centrica? What returns do you target on your capex? Do you expect to do any meaningful M&A? Are your returns targets levered or unlevered? You talk about £1.1bn of capex in 2026, can you remind us of what assets you are investing in to get to this number?How do you think about your capital allocation policy with regards to investment or returning capital to shareholders? You have previously announced share buybacks, will this continue to be part of your capital allocation policy in the future?

Fiscal:

- **Dividend.** You announced an interim dividend of 2p for the first half of 2026, consistent with the intention to increase full-year DPS to 6p. How does that look going forward?
- **Capital structure.** You ended the half-year in a net cash position, and the current high commodity environment as well as turnaround in your core businesses should mean material cash flow generation in the coming years. What do you see as Centrica's future capital structure? How should we think about net debt/EBITDA in the medium term?

J.P.Morgan

Iberdrola

IBE SM

NEUTRAL

Price Target (Dec-27): €18.00

Key JPM Research:

Iberdrola: FY25 preview: a good end to the year and a likely conservative first guidance for FY26

European Utilities: More constructive on the sector – higher commodities bring a true halo effect. u/g ENGI to OW

Iberdrola: To upgrade or not to upgrade (guidance), that is the question. Q1 26 preview

Iberdrola: H126 preview – Current FY guidance still likely to be beaten despite an optically weaker net income print in H1

Iberdrola: A solid quarter and a guidance upgrade to come. 9M 26 preview

Organic vs non-organic growth. What would be Iberdrola's preferred non-organic growth option: networks in a new country like you have done in Finland, bolt-on networks in existing countries (like UK, USA or Brazil), or renewables?

Management. What should we expect in terms of management succession and when?

- **Networks vs renewables.** You have clearly shifted the focus from renewables to networks. Is this the most efficient way to capture the opportunities created by the electrification of the economy? If we believe in your power demand growth projections, would you not get more leverage to this growth driver via more generation capacity?
- **Capital allocation.** You are winning earnings visibility, but that is at the expense of capital intensity in the business; do you think this is fully understood by investors? Based on your current plan, your net debt increases very quickly to €64bn in 2028 and you have flagged the upside risk to your capex plan. Would you need another capital increase before 2030 to continue to sustain the same earnings growth pace? Can we see more hybrids?
- **Offshore wind.** You have not only shifted towards networks, but within renewables you are allocating less capital in the next few years to offshore wind vs what you did in 2021-25. Is there an underlying strategic change in your renewables capital allocation or is this just for temporary reasons? Have you seen offshore wind returns go up sufficiently in the last 12 months?
- **Partnerships.** You have received sizeable proceeds from partnerships to finance the investment in non-manageable renewables in the last few years. Is this trend going to continue even if you are investing less in offshore wind? What is the driver of such a big proportion of capex being financed by third parties? Opportunistic (cheaper source of capital), the optimization of the portfolio (to reduce exposure to higher risk businesses like offshore wind and solar in Spain) or strategic? Are you not worried that bringing in partners may create strategic challenges in the future (e.g. different views on repowering, adding batteries, etc)?
- **Gas vs. renewables.** Why are you not considering building CCGTs in some of the locations where you only own renewables? Does this mean you are more positive about batteries than you have been before?
- **Hurdle rates.** In your current strategic plan, you have shifted from IRR vs WACC targets to absolute RoE targets. How do the target RoEs in the UK or the US compare with your cost of equity in those countries at present?
- **US networks.** Are you not concerned that the US regulators are unlikely to increase the allowed Return on Equity further as affordability concerns emerge in an environment of rising wholesale power prices? Do you think US RoEs will increase to reflect the higher interest rates in the country?
- **Spain networks.** Your return on capital employed in Spanish networks is double digit. Why have you been so unwilling to deploy incremental capex in the business? How much upside to the original plans can you see now?
- **UK networks.** All operators are very optimistic about growth in electricity networks and you all are increasing capex guidance for the next few years. Is the return so attractive in the context of where UK bond yields are these days?
- **Power prices.** What is the upside for the power price captured by Iberdrola from the increase in wholesale prices and in ancillary services costs? How much should we see in 2027 and how much in 2028?

J.P.Morgan

Redeia

RED SM

NEUTRAL

Price Target (Dec-27): €17.00

Key JPM Research:

Redeia: Value attractions capped by weak earnings momentum. Reinstate at Neutral

Redeia: Expect small consensus upgrades, but you need to wait longer for the real good news. H1 2026 review

What is the Board's approach to the dividend? Is the dividend decision made once you have decided the capex plan and the financing of this capex or is the dividend policy an input that is decided alongside the capex plan and thereafter you take the decision on financing?

What would be the pros and cons of a merger with Enagas?

Which could be the potential liability for Redeia for the costs of the national blackout of 28 April 2025? If the topic ends up in the courts, would this influence your decision on the dividend in the years until we get a final verdict?

- In the current regulatory period the headline allowed return is 6.58%. Taking into consideration all components of the methodology, what achieved return do you think you could reach? Do you see room for opex outperformance despite the reduction in opex allowance and the absence of an inflation update?
- Given that the regulatory framework was approved less than 12 months ago, what improvement, if any, do you think it is reasonable to expect in the opex allowance formula and why would the CNMC change a decision it took so recently? Is this a more realistic expectation for the end of 2028, at the midpoint of the regulatory period?
- You have challenged some regulatory decisions in the courts. Based on precedents, is it realistic to expect any improvement in the regulatory framework from the judicial system? When should we expect a decision to be made?
- Do you see any room for capex outperformance within your current investment plan?
- The draft proposal for investment in Transmission Infrastructure in 2025-30 now looks for a total investment of more than €17bn in the period, according to the minister vs the original draft of €13bn. What amount of Redeia capex would be consistent with this proposal? What RAB CAGR to 2031 would this imply? How much of the total final RAB would be work in progress?
- When can this proposal be approved given the calling of a snap election? What are the implications of a delay in approval to mid 2027?
- Have you discussed with the representatives of the Popular Party their idea of an emergency plan for network investments to address bottlenecks in network connections in a 12-18 month period?
- Meanwhile, the government has allowed you to invest €7.7bn in the transmission network above the legacy cap on investments until 2030. What are the implications of this decision for you if the Investment Plan in Transmission in 2025-30 is delayed into mid-2027?
- As the equipment for these potential incremental investments is unlikely to be contracted, what is the risk of capex given that the regulatory standards were set many months ago?
- Based on your current capex expectations, how are you looking to finance your capex? Where could your net debt/EBITDA ratio go assuming that you target a BBB + rating? What is your hybrid capacity now and in 2030?
- How much extra capex can you finance with your current balance sheet? What would be the alternatives if you do not have enough capacity to finance a capex upgrade?
- You have so far invested more than €1.5bn in international businesses. Are you satisfied with the returns from your international investments? Do they make sense in a context where you need to significantly increase your capex in Spain? Could a partial disposal be an option even if you can finance your capex plan without such a disposal? What is the long-term ambition for your international business?

知识星球：前沿信息收录

J.P.Morgan

Enagas

ENG SM

NEUTRAL

Price Target (Dec-27): €15.40

Key JPM Research:

Enagas: Draft regulation out soon, kicking off an eventful 12-month period

Enagas/Naturgy: Surprisingly positive draft regulation for gas companies, particularly for Enagas

Naturgy/Enagas: Final draft of new regulation: Small positive for Naturgy, small negative for Enagas

Affiliates. Would you consider acquiring incremental stakes in existing affiliates where other shareholders could be sellers like Terega or TAP? Are such potential investments equally or more attractive than investing in a new international affiliate?

- **Regulation.** The gas transmission return has been set at 6.46%, but you have been allocated a generous opex allowance for the next regulatory period; how meaningful is the scope to outperform the headline return just based on opex outperformance? How sustainable is this outperformance, until the end of the regulatory period?
- **Balance sheet.** Do you look at a specific balance sheet structure in your Spanish gas operations to achieve additional outperformance? If yes, when do you think you will have the right leverage for your regulated gas business in Spain? How much incremental outperformance could you achieve thanks to financing?
- **Green hydrogen.**Developers are increasingly cautious about the business, arguing about a lack of offtakers' interest and most projects have not seen an FID yet despite having secured meaningful incentives from the authorities. Is this outlook not changing your views on the prospects for the green hydrogen business?
- **Hydrogen infrastructure.** H2Med would imply €2.5bn gross investments and the Spanish backbone €4.7bn of investments. Do you think it is realistic to assume that €7bn+ of investments can be financed for commissioning by 2032 when the utilization of the infrastructure initially should be very low? How much of these investments should be financed by Enagas and charged to Spanish customers in the regulated tariffs? How can the rest be financed? What are the key milestones in the process until you get to the final investment decision on these green hydrogen pipeline projects?
- **Other green gases.** You have some agreements with cement companies for CCS investments: what is the status of these projects and how much capex could they require before 2030? What is the potential for CCS in Spain?
- **Politics.** Given your discussions with different political parties, what would be the risk that a new government led by the Popular Party in 2027 could decide to scale down significantly the green hydrogen infrastructure ambitions in Spain?
- **Non-regulated businesses.** What is their expected contribution to earnings and how much capex should they capture?
- **Peru.** Where are we with regards to the arbitration cases in Peru? A shareholder sold its stake in TgP in 2025, do you believe that the valuation was reasonable? What stops you from selling out of TgP?
- **International strategy.** When you think of selling international assets, is the EPS dilution a factor you take into consideration or do you just look at cash flow management and value optimization? Is the rating the main consideration?
- **Terega.** Could you outline the rationale for acquiring the stake in Terga while selling other international assets? How do you see this helping to develop your hydrogen infrastructure strategy.
- **Dividend policy.** You are targeting a €1/share dividend for 2026 and you have mentioned a potential future range of €0.8-1.1/share for DPS. Given the visibility provided by the new regulatory framework in Spain, could you consider moving to a dividend policy with a specific target growth profile for the DPS? In case of delays in capex in green gases, could Enagas consider a special dividend or a buyback?

Endesa

ELE SM

NEUTRAL

Price Target (Dec-27): €40.00

Key JPM Research:

European Utilities: More constructive on the sector – higher commodities bring a true halo effect. u/g ENGI to OW

Endesa: 9M 26 preview: Solid underlying performance thanks to gas

Endesa: Valuation is punchy, but earnings momentum is still strong. Model update

- **Retail prices.** Can you explain the dynamics of passing through the wholesale power price to the retail price in Spain? How quick is this pass-through process? Are you not concerned that a declining wholesale price (once the gas price starts to normalise) could re-ignite a tougher competitive environment in Spanish retail?
- **Retail strategy and market share.** What was the attraction of acquiring the MasOrange energy retail business? Your market share loss has continued since you made this acquisition: what have you changed in your retail strategy to stop market share loss and when do you expect the trend to revert?
- **Cost pass-throughs.** How much of the incremental ancillary services costs (following the safer system operation post blackout) are you now passing through to clients? When will the impact of incremental revenues in generation vs higher costs in supply become net zero thanks to the pass through? What is the impact that you expect in 2026 on a net basis from the higher ancillary services costs?
- **Renewable growth:** Why have you lagged behind your plans for renewable capacity additions and what can change this trend? Can you see distressed sellers of solar pv assets in the market or not yet? Does a strategy of acquiring solar and building batteries make sense for you given that you are short power?
- **Capacity market.** Can you give us an update on the implementation of the Spanish capacity market? What is the expected impact for Endesa? Is it still needed for the business model of stand-alone batteries to work or have the economics of batteries improved enough to make them attractive without the capacity market?
- **Nuclear life extensions.** What are your expectations for the long term, beyond the Almaraz short life extension?
- **Power demand growth in Spain**. Are you still bullish after having seen the draft Decree on Data Centres permitting? How much of the potential growth can realistically be captured if network investments continue to come in below their maximum potential? What is the upside risk to your network growth capex and how quickly can it be implemented?
- **Non-mainland territories:** Do you still expect to invest meaningful capex in these regions in the next few years?
- **Capital allocation.** You have ruled out more share buybacks beyond the currently approved €2bn programme. What is the alternative then to gear up a still very under-leveraged balance sheet?

Naturgy

NTGY SM

OVERWEIGHT

Price Target (Dec-27): €32.00

Key JPM Research:

Naturgy: Upgrade to OW. Stock overhang likely to end soon and EPS ests should benefit from organic and inorganic tailwinds

European Utilities: Ready for Rock'n Roll in Gas? Utilities are winners, some more than others

Naturgy/Enagas: Final draft of new regulation: Small positive for Naturgy, small negative for Enagas

European Utilities: Low European gas storage underpins positive earnings momentum for generators and integrated utilities

Naturgy: Commodities, networks, Yamal… Plenty of tailwinds while you wait for the M&A

Naturgy: Well on track to deliver upgraded 2026 guidance and to a strong 2027. 9M 26 results preview

Asset disposals. Would you consider a sale of any of your LatAm businesses in the future or are they generating such high returns that you would not consider this option?

Growth opportunities. Where is the organic growth going to come from in the future?

- **Gas/LNG.** Can you explain how you approach the hedging of your gas purchases? Should we look at this process as split in 3 groups: US LNG, RoW LNG and pipeline gas? What is the average duration of your hedges? Are your hedges full hedges or partial that leave margin exposure to gas price moves? What gross margins are you aiming to achieve given the spikes in TTF prices?
- **Yamal LNG.** Can you update us on the status and outlook for your Russian LNG purchases? What are your options to sell the volumes into other geographies outside of Europe?
- **Thermal generation and supply.** How much of the incremental ancillary services costs (following the safer system operation post blackout) are you now passing through to clients? Is the impact of incremental revenues in generation vs higher costs in supply already a net positive for Naturgy? What is the impact that you expect in 2026 on a net basis from the higher ancillary services costs?
- **Spanish capacity market.** Can you update us on the progress on the Spanish capacity market? What earnings impact do you see this having in the medium-term? Do you think that batteries can be run standalone or do they need to be topped up with capacity payments?
- **Renewables growth.** How much additional renewables capacity are you planning to develop in Spain in the next three years? And outside Spain? Based on your experience of the last few years, what is the strategy you believe Naturgy should follow in renewables in the next few years: moderate growth in selective markets or a more aggressive ambition now that prospects for power demand seem to be improving globally?
- **Power networks.** What are your thoughts on the capex and growth potential of your power networks in Spain?
- **Gas networks in Spain.** What is the earnings profile of your subsidiary Nedgia under the new regulatory framework? Would you be open to acquiring the minorities in Nedgia that you sold a few years ago? Would you be interested in acquiring another Spanish network? Would you be allowed to do so by the regulator?
- **Gas networks regulatory review.** What is the read-across to gas from the regulatory review process in power? Theoretically, the parametric model in gas should lead to a different outcome vs power, but are you not concerned that the parameters in gas can be heavily influenced by the aggressive approach of the CNMC towards reducing the opex outperformance achieved by network companies?
- **FX impacts.** What is the sensitivity of your earnings to 10% moves in the LatAm currencies? What are the offsets?
- **Inorganic growth.** What are your ambitions/preferences 1) geographically, and 2) with regards to the type of businesses that you would prefer to acquire. What is the ultimate strategic target of Naturgy if the company makes a large acquisition? Would you consider a meaningful capital increase to help finance a large acquisition?
- **Dividend policy.** Is the target dividend level for 2027 a sustainable basis for the long run? What is the importance of your dividend policy in the context of the analysis of acquisition opportunities?

Drax

DRX LN/DRX.L

OVERWEIGHT

Price Target (Dec-27): 960p

Key JPM Research:

Drax: Branching Out – Resume full coverage with an Overweight Rating

Drax: 2026 EBITDA Upgrade (Sep 2026 Trading Update First Take)

Drax: Announces Strategic Partnership for GW-scale AI Data Center with Brookfield

Group

- What is your capital allocation framework? How do you think about growth versus shareholder returns? What areas would you consider investing in; which generation technologies?
- Can you remind us overall of your options for growth? You have previously spoken about opportunities for a data center at the Drax Power Station site, is there anything else that can be done with the site?

Generation

- Can you walk us through the mechanics of the bridging mechanism from April 2027? How does it work? Is the contract already signed with the government or is there room/scope for renegotiation?
- How does your acquisition of the Bluefield Solar Income Fund fit into your wider generation portfolio?
- Do you still intend to expand the capacity of Cruachan? How should we think of the timeline?

Data Center Options

- You recently announced a partnership with Brookfield to construct a data center at the Drax Power Station site, how have negotiations to find an offtaker progressed? Have the costs of biomass power impacted your ability to negotiate PPAs?
- Can you remind us of the timeline and phases for different stages of the data center? Are you planning to utilise your capacity behind or in front-of-the-meter? How much grid capacity have you got ready to use now?

Pellet Production

- Can you talk about pellet market dynamics and how this will change post 2027? How will this impact your pellet production business in the USA and Canada?
- If your biomass plants in the UK are not competitive post subsidy, can you talk about the market for biomass pellets? Is there a future for your pellet production business post power station subsidy?

Other

- Can you provide some background on BECCS (bioenergy with carbon capture and storage)? Have you received any funding to test the technology? How long do you think it will be until the technology becomes viable?
- What have you been hearing from the government on the support for CCS? What's the latest timeline on a potential framework for BECCS in the UK?

Fortum

FORTUM FH

NEUTRAL

Price Target (Dec-27): €24.40

Key JPM Research:

Fortum: Data Center upside much bigger than we anticipated, upgrade to N

Fortum: Risk/reward still looks balanced to us – 3Q26 Review

- **Google agreement:** You recently announced a data center PPA agreement with Google to supply up to 4 TWh of power per year, could you outline what the impact of this is on your 14% group RONA medium-term target? Are there any financial commitments required on your side to supply this power?
- **Future data center PPA's:** Are you in discussions with other hyperscalers to power their data centers? Should we expect these to be in a similar deal structure to the one with Google? Do you continue to expect similar returns?
- **Finnish power demand:** Could you remind us of the qualities that Finland possesses that mean power demand growth should be strong? What do you think will drive this? Will it all be data centers or will there be other drivers? What is your current base case for power demand growth in Finland until 2030?
- **Power prices:** What is your outlook for Nordic wholesale power prices for the coming years? How does this align with the current forward curve?
- **Organic growth:** What level would wholesale prices need to be at for you to consider building new power generation sites? Which technologies would this be for, only renewables or nuclear as well?
- **New nuclear:** There have been discussions about new nuclear plants in Sweden and Finland. Should this materialise, would this be an area that you would be interested in? What remuneration framework would you need?
- **Hedging:** Can you remind us of your hedging targets? How do your hedged prices compare to market prices? Do you expect this to change if there is a higher share of long-term data center PPA agreements?
- **Asset acquisition opportunities:** Are you considering opportunities to acquire generation assets in the Nordics? Would this primarily be additional nuclear and hydro plants to compliment your existing fleet, or would you consider other technologies as well?
- **Consumer solutions:** Can you talk about the impact that the Elmera acquisition is expected to have on your consumer solutions business? Do you want to continue to acquire other energy retailers in the future?
- **Shareholder returns:** Can you discuss your shareholder return policy? You have previously paid a special dividend to help manage your strong balance sheet, would this be considered again?
- **Commodity exposure:** What is the sensitivity of your earnings to a change in the wholesale Nordic power price?
- **Optimisation premium:** What are the drivers behind your €8-10/MWh optimisation premium, why does this decrease to €6-8/MWh for future years? If we see more volatile renewable generation in the Nordics, do you see upside to your medium-term guidance?

Key JPM Research:

Orsted: Model Update & thoughts into Q1 Results

- **Construction portfolio:** Can you remind us of the current portfolio of projects under construction? How are these progressing? When do you expect these to reach COD?
- **Supply chain:** Can you talk about ways that you have de-risked the supply chain?
- **Future capacity auctions:** What auctions are taking place in the next 18 months? Which of these do you see as your core markets for growth? What do you see as a sustainable rate of capacity growth in GW per annum?
- **Return criteria:** You have previously mentioned your disciplined bidding strategy, what returns are you targeting for new offshore wind projects? How is this impacted by the remuneration framework, whether it be a Contract for Difference, Feed-in-Tariff or under a PPA?
- **Capacity targets:** Do you maintain a target for capacity to win in the upcoming tenders? Does this translate into a medium-term installed capacity target?
- **Shareholder returns:** You are planning on reinstating your dividend, what level are you thinking of paying initially? You have stated that you will consider capital rebalancing measures if overcapitalised after 2027, what could this look like? Are special dividends and share buybacks both considered for this?
- **Farm-downs:** Do you expect to continue your strategy of farming-down 50% of project capacity for future sites? Would this still be the case if you continue to be overcapitalised?
- **Project financing:** Is this something we should expect to see more of given it is becoming more common with your peers and you have used this in Greater Changhua? Do you see this financing structure as a means of de-risking new investments?
- **Interest rates:** How has the higher rate environment impacted the returns you are seeing for new projects? You have previously impaired US projects due to the higher rates, is there a risk that this could happen to other projects if rates continue to rise?
- **Competition:** How do you view the competitive dynamics within the offshore wind space now that many of your peers have exited the industry? How do you think this will impact the opportunity for higher returns from new projects?
- **UK power market reforms:** What are your thoughts on the move to decouple UK power and gas prices by offering CfD's to renewable plants on ROC contracts? What terms would have to be in place for you to accept a CfD for your operational assets?
- **North Sea Investment Pact:** Could you outline what was agreed in the North Sea Investment Pact/Hamburg declaration? How credible is the 15 GW of offshore wind per year target? There were discussions around reducing the LCOE of new offshore wind farms, how do you think this could be done?
- **Inorganic growth:** In recent presentations, you have primarily discussed organic growth opportunities through capacity auctions. Would you instead consider inorganic opportunities at the project level given the large supply of awarded seabed leases with lwo likelihood of reaching COD? Does this include any opportunities with your key shareholder, Equinor, which has got its own offshore wind pipeline?

SSE

SSE LN

OVERWEIGHT

Price Target (Mar-28): 2925p

Key JPM Research:

UK Utilities: Investment theses still intact – Labour Party Conference takeaways

UK Utilities: Wholesale CfDs should be a positive for UK Renewables

SSE Plc: 15% TSR still well underpinned – remain OW (1H27 Preview)

- **Guidance:** Can you talk about the drivers of your 225p to 250p FY30 EPS guidance? Are you confident that you will land in the range with baseline and ASTI/ LOTI capex in networks? Does this assume any return from uncommitted capex?
- **Capex:** Can you talk us through your new five-year capex plan? You guide to £33bn of capex; how is this split between networks, renewables and thermal? What are your targets for returns in each segment?
- **Balance sheet:** How comfortable are your credit metrics, based on your current business plan following the equity raise? What does your business plan assume for regulated returns? How does the new S&P analysis on off-balance sheet debt factor into your funding assumptions?
- **RIIO-T3:** What are your thoughts on the results of the Final Determination of the upcoming Transmission price control? How do these results compare to what you were anticipating?
- **RAV growth:** What level of RAV growth do you expect to generate in the coming years? What are the drivers of this, split between inflation and capex? Do you see upside risk or downside risk to these numbers?
- **GB grid:** Do you expect GB Grid to have any impact on either your transmission or distribution investment programmes? Is the potential introduction of competition in the space a material risk to your growth opportunities?
- **Thermal generation:** What are your plans for investing in new thermal assets going forward? How should we think about this business in a net zero context? Do you see opportunities in hydrogen? CCUS?
- **Offshore wind:** In an environment where competitors are stepping away from new offshore wind investment, how do you view offshore wind returns going forward? Are you confident that you can pass through higher capex costs and still-high interest rates while still making an attractive return?
- **Power market:** What are your thoughts on the move to decouple power and gas prices by offering CfD's to renewable plants on ROC contracts? What terms would have to be in place for you to accept a CfD for your operational assets?
- **Onshore wind:** How comfortable are you with the economics of onshore wind? Also, can you update us any planned growth here, including merchant opportunities?
- **Dogger Bank:** has gone through construction difficulties, yet you have maintained your stance that IRRs will remain higher than the required hurdle rate; what risks are you facing that could change this?
- **UK power demand:** How do you see power demand evolving regionally in the UK? Currently most datacentre demand is in the south, do you think this will change?

RWE

RWE GY

OVERWEIGHT

Price Target (Dec-27): €68.50

Key JPM Research:

RWE: Powering On – remain OW

European Utilities: More constructive on the sector – higher commodities bring a true halo effect. u/g ENGI to OW

RWE: Strong Wind Volumes offset weak Trading – 1Q26 Preview

European Utilities: Ready for Rock'n Roll in Gas? Utilities are winners, some more than others

RWE: We see the top end of FY26 guidance as achievable

RWE: Increases Stake in Amprion to 55%

RWE: FY26 Guidance well underpinned (1H26 Preview)

European Utilities: Low European gas storage underpins positive earnings momentum for generators and integrated utilities

RWE: Upgrades earnings for FY26 & FY27, with upside risks to guidance – remain OW

RWE: More Room to Run – Stay OW

First Principles – RWE: Solving the Power Equation

RWE: Credit where it's due – remain OW

RWE: Results should confirm upside to FY26E consensus – 9M26 Preview

- **Near-term earnings:** Could you update us on the key drivers and risks to your profitability in the short-term and in the medium-term please?
- **Guidance:** You recently announced a €4.55/share EPS target in 2031, what components give you enough visibility to announce this? What are the upside/ downside risks? You are talking about a 10% EPS CAGR to FY31, how are you currently thinking about the balance of growth and buybacks to achieve this, especially after recently completing your €1.5bn buyback?
- **Capital allocation:** You announced €42bn of net cash investments from 2026-31, how should we be thinking of the phasing of this investment spending? Will it be weighted towards the end of the plan or do you feel like you are already able to invest at the ~€8bn/year run-rate? How are you expecting divestments or farm-downs to impact this number?
- **Return criteria:** You have most recently talked of IRRs of >8.5% for new generation projects, is this sufficient for Offshore Wind given the risk profile? Can you outline the required IRRs/hurdle rates for projects by geography?
- **Financing structures:** You have shown your intention to project finance construction for various offshore wind farms, are there any other segments where you could adopt a similar funding strategy?
- **Amprion:** You recently increased your stake in Amprion to an effective 58%, could you outline how this decision fits into your wider capital allocation framework which previously prioritised power generation investments? Does this align with the financing model you chose for your existing stake with Apollo?
- **Offshore wind:** What are your thoughts on the results of the recent AR7 Offshore Wind auction? Is the awarded £91.19/MWh strike price in line with your expectations? Does it meet your return expectations? Do you expect to participate in future Offshore Wind Auctions in the UK or other European regions? What remuneration framework needs to be in place, do you need CfDs or are there any other frameworks that meet your returns criteria? Which core markets do you see as continuing to be supportive of Offshore Wind?
- **German gas plants:** You won a de-rated 2.1 GW of capacity in the most recent German gas plant tender, are you planning on bidding for further capacity in the second round?
- **USA power generation:** The US makes up ~50% of your new generation investment programme – what has driven this large increase in investment? Which regions in the US will this investment be focused in? What makes these regions relatively more attractive for you than others?
- **European power markets:** How do you see the long-term energy strategy of European member states changing following a second energy crisis in five years? Will we see another wave of incentivised renewable investment in attractive frameworks? Are you seeing further electrification within transport, heating and industry?

EDP

EDP PL

NEUTRAL

Price Target (Dec-26): €4.70

Key JPM Research:

EDP: Still facing a transition year

EDP: Q1 26 preview: Expect a weak print, but more bullish outlook

EDP: Strong momentum should be confirmed by a strong margin in Q2. H1 2026 preview

EDP: H1 conf call feedback – guidance upgrade and positive tone on medium term should underpin the shares near term

EDP: A strong quarter outside EDPR – 9M 26 preview

Asset rotation gains. Should we assume that we have seen the peak of EV/IC given the recent moves in interest rates? Given the improvement in the balance sheet of EDPR and the attraction of the projects secured in the last 15 months, would it not make more sense to keep a larger proportion of assets vs doing asset rotations?

Earnings outlook. Given the evolution of hydro profits, the larger-than-expected positive contribution from AT gains in 2026 and the profile of earnings of Portuguese networks, how can EDP deliver growth vs the very elevated 2026 net income basis?

- **Hydro in Iberia.** Peak to off-peak spreads are c. €80/MWh in Iberia for 2027, double what we have seen YTD. Do you think this is a realistic picture of your profitability in this business in 2027? Outright hydro is a beneficiary of higher ancillary services costs too; why are you expecting a drop in ancillary services costs in 2027-28 vs 2026? You estimate your risk from low hydro output at €30m for every 10% Lower hydro output for 2028, but is this not a much bigger risk in 2027 given the high power prices that we can see in the forward curve?
- **Supply.** In 9M 2026 you had €0.2bn of ancillary services costs that you could not pass through to final clients, Do you expect to pass through most of this cost in 2027 and fully in 2028? Does this assume that ancillary services costs decline? Would this not re-ignite retail competition in Portugal?
- **Renewable capacity additions.** Latest datapoint is 3.7GW secured for 2026-28 additions. Is this enough for you to add 1.5GW in 2026 and 2GW per annum in 2027-28? You have added 2.6GW of contracted capacity in the last 15 months, but this was at a time when 1) you had a lot of capacity ready and just waiting for the OBBB to be approved and 2) you enjoyed one of the periods of strongest demand for new energy in the US. Is this not a bearish message about the capacity additions that may come beyond 2028? What is the realistic expectation for your capacity additions beyond 2028? For Europe, you argue that an IRR of 7-8% yields a 265bp spread over WACC. Is this still valid given the move in bond yields in the last few months?
- **Networks.** Where are we with regards to the auctioning of the expired low voltage concessions in Portugal? What is the realistic upside risk to your capex expectations in Iberian networks? Should we assume that 8% return in Portugal and 9% in Spain are sustainable figures or can you see more upside as you grow the scale of your business? Is the transmission business in Brazil becoming too competitive and with too low returns? What is the future of your stake in Celesc?
- **Data centres.** A lot is being discussed about your data centre exposure, but can you elaborate in detail on the magnitude of the opportunities: 1) in Iberia: a) Impact on power prices, how much and when given the time to permit and build these projects; b) impact on EDP capacity additions; and c) realistic expectations for the value of 1.2GW of powered land? 2) In the US: a) Is there potential to crystallise more value for new capacity than the one you have realised so far with your existing PPAs with IT companies? b) Value of powered land/co-locations. How do you decide how much of the opportunity is captured by EDP vs EDPR? Can this be an obstacle for you to fully capture the opportunity?
- **Capacity market in Spain.** How much can EDP assets in Portugal benefit from the Spanish capacity market. Should we assume that Portugal will implement its own capacity auctions?
- **Political risks in Portugal.** Do you see a risk of higher hydro taxes in Portugal if power prices stay high? What is the outlook for the elimination of the special energy tax?
- **Brazil.** Would you consider selling all your business in Brazil now that the growth of the Iberian network business has improved meaningfully or would you only consider selling Generation & Supply?

Snam

SRG IM

NEUTRAL

Price Target (Dec-27): €6.22

Key JPM Research:

Snam: Solid and well managed... but well priced in too

- After several years of growing RAB CAGRs, this plan looks for a reduction in 5-year RAB CAGR from 6.4% to 5.7%, despite €1bn of incremental capex vs the previous plan. Should we assume this is going to be the trend in the next few years as the basis is larger?
- The Rovigo plant received c. 7bcm/year from Qatar prior to the Iran war. What could be the impact on your revenues from the disruption in Qatari LNG supplies? And what is the impact on the Italian market?
- Do you see any risk to your capex estimate if Italy decides to make a more aggressive bet on renewables to lower the power price or could this only have an impact beyond 2030?
- Your €13.7bn capex plan now assumes €3bn replacement capex. Should we assume this should be seen as a sustainable figure on an ongoing basis? What is the upside/ downside risk for this amount going forward?
- Since 2022 you have made substantial investment to adapt the Italian gas network to the loss of gas supplies from Russia. 1) How likely is it in your view that Italy buys Russian gas again? 2). What is the risk that some of the investments you have made become stranded assets because of their low utilisation rate if gas flows change again? How certain is the scheme of recovery of costs for FSRUs?
- You are assuming an increase in gas export volumes from Italy to as much as 7bcm. Do you see risks to that estimate? How much revenue you get from these exports to cover the Italian gas infra costs? If Italy becomes a transit country for nat gas now and hydrogen in the future, what is the risk that the revenues of Snam are less fixed and more linked to the commercial success in selling the molecules to other European countries?
- What happens with your multibillion SouthH2 Corridor project if Germany, which should contribute the H2 demand for that project, abandons its H2 targets? Should we look at the planned €0.2bn capex in H2 for this plan period as an amount that is unlikely to grow much unless the SouthH2 Corridor is accelerated?
- Incremental investments at a time of higher interest rates and with no increase in gas demand should mean significantly higher charges in the bill, how will the regulator respond to such pressure?
- You have included €0.8bn capex in CCS and you point out that the potential investment to 2035 just in Ravenna could be more than €3bn attributable to Snam. You are assuming a 100bp spread over the gas network WACC as regulated return for this business in Italy, when will you have full visibility? What is the potential for Carbon Capture and Storage investments outside of Italy? How interested is Snam in participating in projects outside Ravenna? Snam was a bidder for a stake in the ENI CCS business, present across the whole value chain and outside Italy, is that still a potential option?
- In your latest plan update, you assumed basically stable allowed return in 2028, but is the regulator not looking for a gradual reduction via a final reduction in the cost of debt allowance? The trigger should be enacted for 2027; can you get a higher allowed return to get back to where you are in 2026? What are the pros and cons of the most recent regulatory update?
- Now that we are in the ongoing ROSS (Totex) model, what are the main

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

implications for Snam? If we look at 2026, is the proportion of fast vs slow money sustainable in the future? Is there a mismatch between what the regulator assumes and the actual breakdown of Snam's expenses? Is there a risk that, if nat gas demand drops and hydrogen demand is slow in ramping up, this proportion of fast money declines further to accommodate the volume drop, making your revenues more back-end loaded?

- What are you assuming for the evolution of output-based incentives in the plan period? What is the growth you assume for incentives linked to fully depreciated assets that continue to be operated beyond the end of their regulated life?
- **Financing.** You do not plan to issue incremental hybrids, what would make you change that approach and tap again the hybrids market? How should we see the Italgas exchangeable bond, as a permanent source of financing to be rolled forward regularly? What was the all in cost of that bond until you did the latest refinancing?
- You expect your cost of financing to go from 2.6% in 2025 to 3.1% in 2030. Is this based on an MTM at the start of the year or are you assuming higher rates?
- With regards to your Austrian associates: What is the upside to earnings with the new deal with the Austrian regulator?
- You target a €420m contribution from associates in 2030, which is the same as the previous target for 2029. This now excludes OLT, but you say includes active portfolio management. Can you explain the moving parts that drive the growth vs €369m in 2025?
- How do you look at asset disposals and particularly at the difference between active portfolio management and asset rotations? What are the strategic criteria that are added to the pure financial criteria? How much EPS dilution are you ready to tolerate?
- Why is the disposal of biomethane not included in the plan if you need to make that disposal by 2027? Are you worrried about being seen as a forced seller?
- You look at a 4.5% CAGR in EPS and a 4% increase in DPS at a max 80% dividend payout ratio. How do you decide the dividend policy? Would you grow the dividend more if the EPS grows faster than 4.5% CAGR? How do you justify growing the dividend by less than the EPS? Does this mean you could deliver more than the 4% dividend growth if you remain below the 80% payout? Could the sale of biomethane trigger a special dividend?
- **Tax.** What are the implications of the latest proposals for increases in IRAP in Italy?
- Where are we in the recurrent topic of a potential merger with Terna? What is your view?
- Do you still have ambitions to become an international player in storage?

Terna

TRN IM

NEUTRAL

Price Target (Dec-26): €9.55

Key JPM Research:

Terna: in limbo – model update

- **Trigger.** What are your expectations with regards to the trigger mechanism for 2027?
- **Allowed return from 2028.** Is the regulator not looking for a gradual reduction in the allowed return via the last leg in the reduction of the cost of debt allowance? The trigger should be enacted for 2027; can you get a higher allowed return to get back to where you are in 2026? What are the pros and cons of the most recent regulatory update for the gas sector?
- What is the expected calendar for your next regulatory review?
- **Incentives.** How do you expect your incentives in the transmission business to change with the latest regulatory proposals re the ROSS model? What is the evolution of transmission incentives that you expect for the next few years and why?
- **Dispatching premia.** What has been your experience so far with the new regulatory model for the dispatching premia? What are your updated expectations for the evolution of dispatching premia in the next 4 years?
- **Opex.** What is the difference between your actual opex and your opex allowance due to the capitalisation ratio assumed by the regulator? What are your expectations for the capitalisation ratio in the next update?
- **Tax.** What are the implications of the latest proposals for increases in IRAP in Italy?
- **Industrial plan.** You have announced that you will present a new industrial plan in 2027; while much of this will depend on regulatory determinations, what other topics are you looking to present on? In your current thinking, do you see yourself at the peak capex run-rate per year or do you think there is scope for this to increase?
- **Funding strategy.** Given your growing capital employed, you have gradually more room for incremental hybrid issuance. How much should your hybrid issuance capacity be by 2030? Can you rule out using equity should capex increase?
- **Credit rating.** Do you see yourself maintaining your current credit rating or would you be willing to drop a rating to increase capex while maintaining investment grade status.
- **Interconnectors.** If we look at the larger European countries, Italy should be one of the most interconnected countries in Europe, but you are still planning a significant number of new in the next 10 years. How does the regulator justify the cost of these new ?
- **Shareholder returns.** You are targeting a 4% CAGR in dividends from the 33.96cents basis of 2023 once you exceed the floor of 39.62cents. Is the 4% CAGR the right number in the future or is there room to grow the dividends faster now that your annual capex seems to be reaching a sustainable plateau level?
- **Shareholder structure.** How do you see the role of the State Grid of China as a shareholder? Are investors worried about potential conflicts of interest with them given their international ambitions? How do you respond to this?
- **International ambitions.** How would you describe your international growth ambitions

EQT

EQT US

Not Rated

Balance Sheet/Cash Return Mechanisms

EQT exited 3Q26 with $5.6 B of total debt and just under $5.5 B of net debt, which is rapidly approaching the company's $5.0 B net debt target. What do you think is the optimal debt level for EQT? How will the company's capital allocation strategy evolve once debt targets are achieved?

Can you elaborate on the key elements of EQT's cash-return model? Will EQT be opportunistic with buybacks while debt targets remain outstanding? Longer term, how do you plan to balance production growth vs. FCF generation and shareholder returns?

In mid-October, EQT announced a 3% increase to its dividend to $0.68 per share annualized. What are your thoughts on further growing the base dividend over time? Do you have a target yield?

How do you expect cash taxes to trend through the end of the decade? At what point does EQT expect to be a full cash taxpayer?

Industry/Capital Allocation

- Could you discuss your latest views on the natural gas market as we head into the winter? How, if at all, does the forecast for a strong El Niño weather pattern affect your outlook for the 2026–27 heating season and, in turn, overall supply/demand balances?
- One of the catalysts for the EQT story is the company's firm sales agreements with Southeastern utilities, which are poised to drive a structural improvement in margins through the end of the decade. Can you discuss the structure of these deals and your thoughts on what this could do to your basis differentials and annual FCF in 2028+?
- Can you discuss your current house view on local demand growth, including your latest thoughts on AI/data center demand? How much do you expect U.S. natural gas power demand will grow from AI/data centers by the end of the decade?
- Could you elaborate on your pipeline of strategic midstream growth projects, which are unlocking several unique marketing opportunities with data centers and utilities? Can you talk more about the commercial terms of Shippingport and Homer City in PA and CPV Shay and EQT's other announced power project in WV?
- On the 2Q print, EQT announced a 10-year agreement to supply 325,000 Dth/d of natural gas to the CPV Shay Energy Center, a 2.1 GW CCGT facility in Doddridge County, West Virginia. Notably, the gas supply agreement, which is expected to begin as early as 2031, features pricing linked to PJM power prices rather than a gas price index. Can you talk about why EQT was interested in pursuing this pricing structure? Do you intend to structure future gas supply deals in a similar manner?
- How does the data center pipeline look for EQT? Do you still anticipate signing at least one more gas supply agreement in West Virginia by YE26?
- With all key regulatory approvals secured, EQT has elected to accelerate $85 MM of capital contributions related to MVP Southgate in order to de-risk the project and complete construction by YE26, which is over one year ahead of schedule. What drove EQT to move this timeline forward, and what is the potential impact on cash flows once the project is completed?
- Can you provide an update on the open season for EQT's new 42-inch POWER Pipeline project, which connects EQT's core Marcellus PA assets to growing demand at the Clarington hub in OH? What will be the impact to EQT once this project is online?
- What are your latest thoughts on the in-service timing for new LNG facilities and expansion projects? What is your macro view on the LNG S/D picture through 2030+, and what will be the interplay between international and domestic gas prices? How, if at all, have heightened geopolitical tensions in the Middle East changed your outlook for global LNG prices?
- Can you provide details on your announced LNG offtake agreements? At a high level, can you discuss the pros and cons of LNG offtake agreements vs. tolling and netback agreements that have been signed by some of your peers, including EOG and APA?
- Can you tell us about your in-house marketing and trading capabilities? Why would an international buyer want to buy LNG from EQT vs. established players like Cheniere, Shell, or Vitol? What can EQT offer the market that is not already being

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

Hedging Strategy/Other

On the 3Q26 print, EQT announced it has contracted 7 Bcf of storage capacity at Leaf River Energy Center's salt dome expansion project along the Gulf Coast, bringing its total Gulf Coast storage capacity to 11 Bcf. Why does EQT see owning storage as important in the current macro environment, and do you have a target for how much storage capacity you want to own?

Could EQT review its hedging strategy and hedge book? Does management intend to layer on any incremental hedges in 2027 beyond current levels? Could you quantify the company's overall hedged/unhedged corporate breakeven?

Could you describe EQT's differentiated production strategy—curtailing output when local prices are weak and surging volumes when M2 is strong—and what impact this might have on corporate basis differentials compared to historical levels?

What impact do the company's LNG agreements have on cash flow breakevens? Can you discuss what your cost structure will look like? What type of net spread between TTF/JKM will you need to break even?

offered?

- What is your view on the shape of the curve for natural gas? Do you currently see more upside risk or downside risk to current natural gas pricing levels? How do recent export trends shape your view of the longer-term mid-cycle price for the commodity?
- The U.S. E&P industry has seen a large number of M&A deals over the past few years. What are management's thoughts on further consolidation in the U.S. shale industry? What are the key criteria the company considers when evaluating M&A opportunities, particularly with respect to portfolio synergies and shareholder returns?

Portfolio

- One of the core messages from EQT is the company's belief that future value creation potential in E&P will increasingly be driven by margin optimization through midstream, marketing, and logistics. Clearly, capital efficiency is still important, but can you elaborate on this view?
- Can you provide some more color on the risking of EQT's FY26 guide and discuss the potential upside risk in terms of capital efficiency, opex, and differentials, which continue to surpass expectations?
- In what ways has gaining control of midstream operations enhanced EQT's upstream capital efficiency? How does EQT's integrated gas business model enhance its marketing capabilities compared to its upstream peers?
- Overall, how is capital efficiency evolving in the field, and how should we think about maintenance level spending? What about strategic growth spending over the next three years?
- How is EQT approaching volume growth in the current macro environment? What about longer-term growth through the end of the decade as natural gas fundamentals improve in 2028+?
- EQT had noted plans to invest its first ~$600 MM of post-dividend FCF in 2026 into high-return, infrastructure-focused growth projects, largely related to compression projects, water infrastructure, the Clarington Connector pipeline, and strategic leasing. Can you explain why these investments are the best use of FCF? How do you expect growth capital to trend in 2027/2028?
- Could management provide an update on its compression projects? What is the capex outlay related to these projects, and can you quantify the impact that this initiative has had on D&C costs? Is there room for further capital efficiencies?
- Can you discuss how well productivity is trending across the company's asset base in Appalachia? How does current well productivity compare to your internal expectations? How do you expect well productivity to trend longer term?
- What are you currently seeing on service cost inflation? How contracted is EQT on rigs and completion crews? Could you provide some color on when you might start to see higher service pricing flow through to capex?
- Can you give us your updated view on the A&D market in Appalachia? Would the company ever consider entering a new operating area?

Key JPM Research:

Expand Energy: 3Q26 Post Mortem and Model Update: Capex Headwinds Cast a Shadow over CEO Brown's Initial Call

Balance Sheet/Capital Return

Can you talk about EXE's cash return strategy? How should we think about the pace of buybacks following the company's shift away from the variable dividend?

EXE has allocated ~$1.3bn to gross debt reduction in 2026. Can you talk about your longer-term leverage and debt targets and how you expect these targets to shift over time? What do you believe is the right level of debt or leverage for your business?

What are your plans to grow the base dividend over the long term?

Can you walk us through your hedging philosophy? Do you see this changing?

Capital Allocation

- Can you talk about your overall capital allocation strategy? How do you balance cash return with investing in the business and portfolio renewal? How do you think about growing volumes over the longer term vs. running a maintenance program and maximizing FCF?
- EXE has pursued a unique strategy of building "productive capacity" when natural gas prices are lower in anticipation of higher prices in the future. Would you expect EXE to deploy this strategy again in the future? Do you see any operational risk to this strategy? Is there a risk of degradation if DUCs/dTILs are not TIL'd for a significant period of time?
- Can you walk us through the decision to drop from 12 to 10 rigs heading into 4Q26? Given the current macro environment, how many rigs do you expect to run in 2027? What conditions would lead you to add activity, and what would cause you to pull back further?
- How do you plan to allocate capital between SW Appalachia, NE Appalachia, and the Haynesville?

Operations

- As the resource expansion phase of U.S. shale has largely moved into the later innings, one of the key items on the minds of investors is inventory durability. Can you talk a little bit about your inventory depth for both EXE as a whole and also give us some detail on inventory depth in each of your plays?
- EXE recently announced an entry into the Western Haynesville, with plans to budget ~$75 MM this year for appraisal spend. Can you talk about why you pursued this position? What are your expectations for returns and activity levels? How have initial well results compared to the company's pre-drill expectations?
- With the 3Q26 update, EXE raised its FY26 capex outlook to ~$3bn (vs. the prior $2.85bn midpoint), with management citing higher diesel costs and modest OFS inflationary pressures. What are you seeing on service cost inflation right now, and how do you expect this will affect the 2027 budget?
- Can you remind us how contracted you are on your rigs and completion crews?
- In SW Appalachia, EXE highlighted a ~20% improvement in footage per day and a ~10% improvement in cost per foot from 2025 to 2026. Could management unpack the key drivers behind this improvement in capital efficiency? Do you see room for further improvement?
- Can you talk about the decision to construct a company-owned sand mine in the Haynesville? What costs and operational advantages do you expect from the mine?
- EXE has highlighted improving well productivity trends in the Haynesville owing to the company's Gen3 completion design and noted that it is currently evaluating GenX testing, with initial results further reducing decline rates. What are the key differences between Gen3 and GenX, and when do you expect to conclude GenX testing? Could GenX ultimately supplement or replace Gen3?
- Can you talk about EXE's latest thoughts on well productivity in both Appalachia and the Haynesville? How do you expect well productivity to trend longer term in

知识星球：前沿信息收录
VX:FCCNN88

Portfolio/A&D

What is your appetite for further upstream M&A post the SWN merger? Would you consider deals outside of the Haynesville or Appalachia?

What is your view of acquiring midstream assets? Would you consider vertically integrating into gathering as some natural gas peers have done?

Can you review the strategic rationale behind the company's $1.25 B acquisition of Twin Eagle? What made this the right time to acquire a natural gas marketing and optimization business, and why was Twin Eagle the right asset to pursue?

How is the integration with Twin Eagle progressing? Do you see any potential upside to the company's $150mm of projected synergies by YE28?

EXE has an ownership stake in the NG3 pipeline, which is now in service. How does this asset fit into the portfolio? Would you consider investing in additional midstream projects?

Other

Can you discuss why Danny Brown is the right choice to lead the company as President & CEO? What qualities does Danny add to EXE that the other candidates did not? Are there any priorities that could shift across capital allocation, portfolio management, or shareholder returns under his new leadership?

Could you discuss your latest macro views on the natural gas market? Can you talk about what you're seeing in the Haynesville from an activity perspective?

With the increase in LNG demand that's expected over the next several years, do you think the Haynesville has the capacity to grow and meet this demand? Do you have a sense of what the current productive capacity of the Haynesville looks like?

each basin?

- In general, E&Ps are drilling their best locations first. How do you expect your inventory quality and the resulting capital efficiency to change over time? What will capital efficiency look like in five years compared to where you are today?
- SWN owned seven rigs and two frac fleets, which EXE is now using in its program. Owning OFS equipment is a bit unique among the E&Ps. Can you talk about the pros and cons of owning your own equipment? How does this impact wells costs?
- What is your thinking on capital allocation between the Haynesville and the Bossier? Do you need to co-develop the two zones? Can you compare Haynesville vs Bossier development?
- Can you talk about the differences between the Upper and Lower Marcellus? How do the returns of the two zones compare? Can you talk about your development split between the Upper and Lower Marcellus and how it will trend over time?
- EXE has talked about co-developing the Upper and Lower Marcellus, which contrasts with one of your peers in NE App. Are you co-developing across the play or just in certain areas? Why is co-development is the right strategy here?
- What kind of lateral lengths does the company envisage across the company's three operational areas? How have EXE's longer lateral length wells performed when compared to the company's previous wells? What's the future opportunity set to further extend laterals?

Marketing

- Following the Twin Eagle acquisition, EXE raised its marketing and commercial (M&C) FCF target by $250mm to $750mm. Could you outline some specific strategies EXE plans to implement to meet this objective? How does Twin Eagle accelerate the delivery of EXE's M&C FCF target?
- EXE announced a deal to supply Lake Charles Methanol (LCM) with 325 MMcf/d beginning in 2030 at a premium to NYMEX. Can you talk about the pricing structure of this deal? Do you see an opportunity to sign incremental deals with similar industrial customers?
- On the 1Q26 print, EXE announced a 20-year SPA with Delfin FLNG for ~1.15 MMTpa starting in 2031 and noted that it had terminated its previously announced SPAs with Delfin and Gunvor. Can you share more detail on the terms and strategic rationale behind the new Delfin FLNG agreement? What made this SPA more attractive than the arrangements that were terminated?
- Have you had conversations with counterparties that are involved in AI/data centers? As the largest gas producer in the L48, do you see an opportunity to partner with someone in this space? If so, how could such a deal be structured?
- What are your expectations for Haynesville basis? Are you worried about natural gas growth outpacing pipeline takeaway capacity? At what pricing points do you sell your Haynesville gas volumes?
- Could you talk about your outlook for basis differentials in Appalachia?

PBF Energy

PBF US

NEUTRAL

Price Target (Dec-27): $89.00

***Key JPM Research*:**

PBF Energy: 3Q26 Post Mortem and Model Update

Martinez and West Coast

The West Coast earned the highest regional margin in the system this quarter, with lower per-barrel costs than a year ago. With the Martinez hydrocracker turnaround done and the issue resolved, what run rate and capture should we expect from the West Coast in 2027?

You expect to finalize the Martinez insurance claim before year-end, and any further payments depend on actual covered expenditures and calculated losses. What remains open in the business interruption claim, and how should we think about the size of the final payment?

The purchase of the Air Products hydrogen plants is now reflected in your results. What reliability benefits are you seeing at Torrance so far, and how does the seller's note fit into your capital structure now that you are net cash?

You are maximizing California crude runs and benefiting from discounted Latin American and Canadian heavy barrels. Can you discuss the debottlenecking opportunity to run more WCS on the West Coast, including its scope, timing and cost?

Refining and Macro

- Management described refining as having entered a "new higher cycle," with more volatility and wider crude differentials. What gives you confidence that this cycle lasts into 2027, and what would make you reassess that view?
- You framed the product market as a supply story, with tight supply and firm demand. How long do you expect it to take for global inventories to rebuild, and do you see mid-cycle margins as structurally higher even after the system restocks?
- Benchmark cracks more than doubled year-over-year across all of your regions. How should we think about PBF's ability to turn that benchmark strength into realized margin from here, and how much of the improvement came from having the full system available?
- No turnarounds are scheduled in the fourth quarter, and throughput guidance sits above third-quarter levels. What would push you to the top or bottom of that range, and are you seeing any demand softness in your system at current product prices?

Commercial Strategy and Margin Capture

- Heavy crude rose to 30% of system throughput, helped by Latin American heavy barrels, freight and Canadian market dynamics. How much more flexibility do you have to raise heavy runs, and do you see the current widening in sour differentials as structural or tied to the Middle East conflict?
- Chalmette's margin lagged the rest of the system this quarter, while its operating costs rose year-over-year. What is holding back Gulf Coast capture, and what commercial steps are you taking at the docks to improve it?
- You noted that freight dynamics have widened crude differentials and that being close to production gives PBF a cost advantage. How valuable is your time-charter position in today's freight market, and do you plan to change the charter mix going into 2027?
- The working-capital benefit was modest this quarter after a large release in 2Q. Now that inventories have normalized, how should we think about working-capital swings in a sustained high-price, backwardated market?

RBI Program

- RBI is expected to exceed $350 MM of run-rate cost improvements by year-end, and you plan to continue the effort beyond current goals. Where will the remaining savings come from, and how should we reconcile them with reported operating expense and G&A, which were both higher year-over-year?
- RBI-driven capital reductions are running ahead of your commitment, with much of the benefit coming from turnarounds. How much of that efficiency carries into what will be a heavier 2027 turnaround year?
- You have made progress on energy intensity, particularly at Toledo, and strategic sourcing has identified meaningful annual savings. How fast are you implementing the remaining initiatives, and which categories have the most upside left?
- With deleveraging and RBI self-help nearing completion, what does the next phase of RBI look like, and which company-specific levers can still reduce PBF's

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

dependence on the macro?

Turnarounds and Capital

- You moved the Chalmette and Toledo turnarounds to 2027, and you expect 2027 to be a heavier turnaround year and 2028 a lighter one. Ahead of formal guidance, how should we frame downtime and turnaround spend next year?
- Your 2026 capex guidance includes advance material purchases for the 2027 turnarounds, and year-to-date spending implies a heavy fourth quarter. How much spend was pulled forward, and how should we bridge 2026 capex to 2027?
- Toledo delivered one of the strongest margins in the system this quarter. What operating risks come with running Toledo and Chalmette longer before their 2027 turnarounds?
- The first phase of the Chalmette jet fuel project is producing, and output is set to double in 2027. What are the economics of the second phase, and are there other similar high-return, low-capital projects in the pipeline?

Renewable Diesel

- SBR ran at the top end of its throughput guidance, and PBF received its first dividend from the joint venture. What cadence of distributions should we expect, and how do current margins compare with your long-term mid-cycle EBITDA target?
- RIN prices have more than doubled year-over-year. How are you balancing RIN purchasing costs on the refining side against the RIN tailwind at SBR, and what regulatory relief, such as small refinery exemptions, are you assuming?

Capital Allocation, Balance Sheet, and Capital Return

- After this year's refinancing and redemptions, PBF is now in a net cash position. What is the right long-term level of gross debt, and how much cash do you want to hold through the cycle?
- You expect a meaningful drop in interest expense next year. With leverage now negative on a net basis, how does your capital allocation framework change, and when should we expect buybacks to become the main channel for returns?
- You raised the quarterly dividend 18% and stressed that it should be sustainable through all markets. What level of mid-cycle cash generation is the dividend sized against, and what long-term growth rate should we expect?
- Management called buybacks a critical part of shareholder returns while also prioritizing high-return, low-capital projects. What hurdle rate do you use to compare the two, and how should we think about cash outflows for the rest of the year?

Portfolio and M&A

- PBF operates six refineries across five states, and its financial footing is now the strongest since the company was formed. Does a net cash balance sheet change how you look at M&A, and do you see any opportunity across the industry to bring back shuttered or idled capacity in this cycle?

Phillips 66

PSX US

OVERWEIGHT

Price Target (Dec-27): $275.00

Key JPM Research:

Phillips 66: 3Q26 Post Mortem and Model Update

Phillips 66: Inside the Corner Suite: 10 Takeaways from PSX's Wood River Refinery Investor Tour

Renewable Fuels

Renewable Fuels earnings and production both fell from 2Q because of lower margins, inventory effects and higher costs, after Rodeo ran at record utilization last quarter. What drove the lower volumes, and how should we think about Rodeo margins, including the 45Z benefit, going into 2027?

Refining/Macro

- Nearly all of the quarter-over-quarter increase in realized margin came from the market indicator rather than from better capture. How much of the third-quarter earnings power do you see as durable, and what does the system earn once cracks normalize?
- Management pointed to significant refining capacity offline, constrained Chinese exports and limited Russian distillate supply as supports for margins into 2027. Which signposts are you watching, and how do you see demand elasticity at current product prices heading into winter?
- The deck credits freight, distillate yield and the Billings small refinery exemption as drivers of capture this quarter. How much of that is repeatable, and how should we compare it with your winter capture guidance?
- Regional capture diverged sharply this quarter: the Gulf Coast was well above 100%, while the West Coast fell sharply from 2Q. What drove the West Coast decline, and how repeatable is the Gulf Coast performance?
- The Central Corridor was the largest contributor to refining earnings this quarter, with record processed inputs. You have also delivered initial WRB synergies. What is the full synergy opportunity, and are you now running at full heavy crude capacity across Borger and Wood River?
- Adjusted controllable costs rose from 2Q. What drove the increase, and how confident are you in reaching your $5.50 per barrel target by 2027?
- Management described heavy crude as a "race to the bottom" among competing heavy barrels, and PSX remains highly levered to the WCS spread. What would need to change for that dynamic to reverse, and where in the system do you capture the most value from wider differentials?
- After a record-utilization quarter helped by debottlenecking projects completed last year, you guided fourth-quarter utilization to the mid-90s. What should we think of as your sustainable utilization rate going forward?
- Costs for decommissioning and redeveloping the Los Angeles Refinery site now sit in Corporate and Other. What are your plans for the site, and how does it fit with your West Coast strategy under Western Gateway?

Midstream

- Midstream earnings dipped from 2Q on lower gas transportation margins. How should we think about the path to your $4.5B run-rate EBITDA target by year-end 2027, alongside the roughly 5% annual growth you outlined?
- The Coastal Bend expansion is expected to deliver initial volumes this quarter and fully ramp in early 2027, and you are building a third Corpus Christi fractionator. How fast do you expect the ramp to be, and how much of the new capacity is contracted?
- The Freeport LPG export dock is running above nameplate. Is more export debottlenecking a priority, and how confident are you in keeping your infrastructure near full capacity given investor concerns about NGL overbuild in the Permian?
- Iron Mesa and Zeus are expected to lift Permian volumes. What ramp do you expect,

知识星球：前沿信息收录
更多一手投研资料扫码加微信
知识星球：前沿信息收录
VX:FCCNN88

and what is your outlook for additional gas plants in the basin?

- Western Gateway has reached FID with a 2029 in-service target, and spending peaks in 2028. How should we think about the project's return profile and integration uplift, and what are the key regulatory milestones, including reversing the SFPP West Line?

Chemicals

- Chemicals earnings declined on lower polyethylene margins, and fourth-quarter utilization is guided lower. Where are we in the cycle, and how long do you expect oversupply to last?
- U.S. ethane crackers keep their cost advantage over Asian naphtha, and Golden Triangle start-up costs will weigh on CPChem in the fourth quarter. How should we think about the earnings ramp from Golden Triangle and Ras Laffan in 2027?

M&S

- Marketing margins compressed in a rising price environment, roughly halving M&S EBITDA per barrel from 2Q. How quickly do margins recover once prices stabilize, and what is a reasonable go-forward run rate for domestic fuel margins?
- The commercial organization has doubled in size and is accretive to corporate ROCE, and the time-charter fleet is set to double. How do you measure the commercial contribution separately from refining capture, and what return do you expect from the fleet expansion?

Capital Allocation/Balance Sheet/Capital Returns

- Net debt-to-capital is now well below where it started the year, and you have meaningful maturities coming in 2027 against your $17B debt target. What is the realistic timeline to that target, and what comes next once you reach it?
- Year-to-date shareholder distributions have trailed your more-than-50% target, and you plan to step up fourth-quarter buybacks to catch up. How large a fourth-quarter return should we expect, and how does the framework evolve now that the leverage targets are met?
- You announced a second dividend increase this year and expect high-single-digit annual growth in the per-share dividend. What are the main puts and takes to that framework as refining cash flow normalizes?

Portfolio/M&A

- You said you will stay disciplined on M&A and that valuations are rising. You have also said that non-operated midstream assets could be divested. With the balance sheet repaired, what criteria would an acquisition need to meet, and is there still a pipeline of asset sales?
- Growth capex will stay disciplined, and Western Gateway spending peaks in 2028. How should we think about the trajectory of the capital budget beyond 2026 ahead of the December update?

Ivanhoe Electric

IE US

OVERWEIGHT

Price Target (Dec-27): $15

Key JPM Research:

Ivanhoe Electric: Santa Cruz PFS – Initial Takeaways

- What are your views on the current state of global copper market fundamentals as they relate to both ongoing supply-side tightness and underlying demand trends, and to what extent do you feel the 'electrification of everything' could become an acute priority for non-fossil fuel producing countries as a form of risk mitigation?
- What are your thoughts on potential tariffs for US refined copper imports and how this could impact your business and regional markets? What do you feel it would take for copper to be included for 10% production tax credits in the US?
- You recently published an update to your feasibility study for Santa Cruz. Could you give a quick overview of the project scope changes? The study only focuses on the oxide and chalcocite domains, so how do you view potential for future expansions or upside to the current scope?
- You've recently outlined plans to acquire a Tunnel Boring Machine (TBM). How will this impact operations and future development opportunities? What about in terms of project ramp timing and incremental capital costs?
- Turning to permitting, could you speak to the 'phased approach' being taken and benefits from being located on private land?What permits are first needed to break ground and where do these stand today? What permits are no longer needed with the TBM?
- Turning to financing, how are you thinking about the variety of avenues available on this front between EX-IM, partnerships, and potential offtakes? What does the ideal financing package look like? What sort of partners are you engaged with and is there a preference between engagement at the project or corporate level? What are the next key milestones on this front?
- Last year, you secured a $200m credit facility and y raised ~$170m in the equity markets. Is this sufficient to bridge the gap to FID, and are there any near-term cash outlays to consider?
- How does both Typhoon & CGI fit into your business model and what are the competitive advantages of having access to these technologies? We've seen this technologies translate into partnerships with Ma'aden in Saudi Arabia and BHP in the US. Could you talk a bit about how these partnerships are structured and the benefits of risk-sharing for early-stage exploration activities?Why is this preferred vs. licensing the technology? Are you considering additional partnerships down the road?
- ESS demand continues to grow, not only in China but here in the US too. Are there opportunities for government support on this front for your VRB business?
- What's the status of your other US-based exploration projects, namely Hog Heaven and Tintic? Where do you see the biggest opportunity among these, or could any of these be considered non-core?
- How does Ivanhoe Electric view M&A in the space?

J.P.Morgan

Lithium Americas

LAC US

OVERWEIGHT

Price Target (Dec-27): $6

Key JPM Research:

Lithium Americas: Improved Long-Term Lithium Outlook and Derisked Build for Key Domestic Supplier – Assuming Coverage at OW

- How do you explain the recent downturn in lithium pricing, particularly over the last ~2 months? How much this is structural vs headline driven? How close are we to a bottom, or levels where we may expect currently producing or ramping projects to make C&I announcements?
- Given the ongoing delays and cost inflation impacting global lithium projects, how do you see the supply/demand balance evolving over the next 2-3 years? Are you seeing any signs of project deferrals or cancelations that could tighten the market further? If anything, there have been announcements lately of projects coming out of care and maintenance in Australia and Africa.
- How are you assessing lithium supply risk out of China, particularly from Jiangxi province lepidolite projects? In your view, are incremental "supply shocks" from projects going offline or restarting large enough to change market sentiment and/or drive meaningful price volatility, or is the market becoming too large for a single supply announcement to drive sentiment?
- What lithium price do you believe is required to incentivize new greenfield supply, particularly in North America? How does this compare with the current long-term contract prices you're seeing in the market? Are phased expansions at LAC economical at current lithium price levels?
- How should we think about the durability/timing of US government lithium procurement programs (one was canceled on August 4th) and what that means for domestic price support and contracting?
- Are phased expansions at LAC economical at current lithium price levels? What's the likely minimum price level for Western greenfield projects to get invested in/ built?
- For ESS, what level of near-term or medium-term substitution risk do you see from sodium-ion displacing lithium-ion deployments that otherwise would have driven lithium demand? What do you make of large Chinese battery makers pushing sodium-ion and more recent signals from US automakers (e.g., GM) exploring the chemistry?
- Management have been in discussions with the US government/Congress about the need for lithium price discovery and transparency, as well as the potential for establishing a lithium price floor to support domestic supply security. Can you elaborate on the rationale behind this proposal, and how it was received by policymakers and industry stakeholders?
- What mechanisms are being considered, and how might a price floor impact project financing, investment flows, and long-term market competitiveness for US producers?
- Are there other policy measures that could materially support the long-term viability of Thacker Pass or the broader North American lithium industry?
- Can you provide an update on the current operational status at Thacker Pass, including progress on construction, key milestones achieved, and any challenges encountered to date?
- LAC's recent Fall 2026 Community Newsletter flags labor already near the prior-guided peak of ~2,000? Any expectations on how long labor stays at this level or

知识星球：前沿信息收录
VX:FCCNN88

Matthew Lofting, CFA AC
(44-20) 7134-6301
matthew.lofting@jpmorgan.com

any scenarios where labor materially surpasses these levels?

- Once in production, how do you see Thacker Pass's output influencing market balances, pricing, and the competitive landscape, especially considering potential new entrants and evolving battery chemistries?
- How does LAC plan to maintain cost-competitiveness over the long term, especially as global hard rock and brine producers scale, and what aspects of the Thacker Pass flowsheet or resource give you confidence in structural cost advantages?
- If sulfur pricing remains elevated into 2028 due to tighter global supply, how does that flow through to Thacker Pass unit economics (cash cost/t LCE)? Your 2024 DFS indicated ~9.15t liquid sulfur per 1t lithium carbonate over the LOM. How should we benchmark that versus spodumene converters (and/or other carbonate supply routes)? If sulfuric acid availability tightens materially, is there any risk to Thacker Pass throughput or ramp timing? How do you mitigate this risk?
- What is the company's strategy for building a diversified customer base, and does LAC intend to prioritize long-term contracted volumes with OEMs or leave a portion of production uncontracted to capture market upside?
- What types of strategic partners (e.g., OEMs, battery makers, chemical processors, infrastructure funds, etc.) does LAC view as most important for the next phase of growth?
- With lithium formally designated a critical mineral and the US government taking an equity stake through the DOE financing structure, how is LAC shaping its relationship with federal agencies, and what expectations or strategic advantages come with being a government-backed supplier within the national security supply chain?
- What is your latest estimate for total Phase 1 capex, and what are the key sensitivities or risks that could drive further increases, including managing tariff and supply chain risks given the $80m-100m estimated tariff exposure and the company's definitive capital estimate process? When is this process targeted to conclude (prior expectation was near end of 3Q26)?
- Please outline the Phase 1 capex spending profile from what's been spent to date through mechanical completion expected in late 2027. Which years represent peak capital intensity for the project?
- As of 2Q, you had ~$1.3bn of total cash and restricted cash (including ~$530m at the JV level), have drawn ~$1.21bn cumulatively on the DOE loan (including a $342m third advance), have utilized the March 2026 ATM for ~$68.5m net proceeds through 6/30, and subsequently announced up to $175m of Yorkville debentures. How should investors think about your current liquidity runway relative to your capital needs as well as how you plan to leverage ATM capacity and other incremental financing tools?
- What contingency plans are in place if construction costs or timelines slip, or if lithium prices weaken materially before ramp-up?
- Based on your current cost structure and expected production profile, when do you anticipate Thacker Pass will reach positive EBITDA and free cash flow? What are the key variables that could accelerate or delay this inflection point?
- How is LAC evaluating M&A opportunities (if at all), and what characteristics would make an asset or partner strategically compelling in the current market? If not LAC, do you think further industry consolidation is a likely theme to monitor going forward?

Bangchak

BCP TB

Not Covered

- **Ex-refinery pricing:** What is the margin impact from the revised ex-refinery formula and weekly GRM ceiling? How much can be offset by actual freight/crude costs, and what would the 2026 impact have been if applied for the full year?
- **Refinery-gate cuts/Oil Fuel Fund:** Should investors assume policy will increasingly cap refining upside? What happens after the November measures expire, and when should the ~Bt17bn Oil Fuel Fund receivable be repaid?
- **Export controls:** How much are diesel/gasoline export restrictions constraining utilization and margins? If extended into 2027, what is the earnings impact, and can Bangchak Hong Kong help absorb surplus barrels?
- **Sriracha:** What margin uplift did the September upgrade deliver, how much of the gap with Phra Khanong can be closed, and what is limiting asphalt production?
- **Hedging:** How much of 2027 crack exposure is hedged and at what levels? Has the hedging framework changed after this year's losses, and how much of the September open position settles in 4Q?
- **SAF/HVO:** How much of 2027 SAF output is contracted, and how do you see UCO availability/economics as regional capacity grows? What would trigger a switch toward HVO, and what is the potential exposure from the former EPC contractor's claim?
- **Upstream/OKEA:** How do you bridge the gap between OKEA's 2027 guidance and the ~100kboepd 2031 group target? How much requires M&A, and when should we expect the first G2/65 well?
- **Domestic marketing:** How sustainable are the retail market-share gains, what drove the recent moderation, and where should normalized marketing margins settle in 2027?
- **Banking/counterparties:** What drove the increase in trading-partner guarantees as bank guarantees/LCs declined? Have international banking relationships normalized, and what is the special committee timeline?
- **Capital allocation:** How are you balancing dividends/buybacks against growth capex and working-capital needs? How should we think about leverage and upcoming debenture refinancing?

Chemical Reactions: October 2026: September urea exports hit record high; China chemical inventories fall in 3Q

SK Innovation: Raise PT to W190k post 3Q beat; 3Q NP rises to new record high; ND/E falls to 53%, implying potential for shareholder return to surprise

- **Shareholder returns:** With net debt already below the W20tn 2030 target and a new shareholder return policy due by year-end, should we expect something similar to the previous 35% payout/W2,000 minimum dividend, or could buybacks/ cancellation also feature? How do dividend tax changes, PRS and city gas RCPS affect the framework?
- **Earnings sustainability:** How much of the recent refining strength is structural versus one-off, and what is sustainable into 2027? If Brent normalizes toward pre-war levels, what is the earnings sensitivity after hedges?
- **Price-cap compensation:** Where do discussions with the government stand on SK Energy's compensation claim? What outcome and timing are realistic, and is there funding risk if recognition slips into next year?
- **SK Energy/VLCC exposure:** What proportion of crude freight is covered by long-term charters versus spot VLCCs? How do long-term charter economics compare with current spot rates, when do contracts roll over, and what is the resulting refining-margin sensitivity to elevated VLCC rates?
- **Lubricants:** S-Oil expects Group III supply to remain tight through 2027, while SKI has indicated spreads could narrow as disruptions ease. What drives the different views? What is a normalized earnings level, and how much volume is now covered by term contracts such as HF Sinclair?
- **E&S/gas supply:** What is E&S's overall gas/LNG supply mix across long-term contracts and spot purchases, and how should this evolve? As Tangguh rolls off and Barossa ramps up, what share could Barossa represent and how do its delivered economics compare with Tangguh and spot LNG? What does the changing mix imply for normalized E&S margins?
- **Chemicals:** What is the latest Ulsan restructuring plan following Shaheen's start-up? Are naphtha supply to Korea Petrochemical and polymer restructuring still the base case, and are overseas chemical disposals on track?
- **SK On/ESS:** When can SK On break even excluding AMPC and one-offs? What is the status of the second NeoVolta agreement and end-customer visibility, including potential SK Group data centres? Can you give us a recap on the result of the latest Korea 3rd batch ESS tender and the key drivers behind our market share changes? How to think about future tender sizes? Any updates on Korea version of AMPC legislation?
- **SMR/TerraPower:** How should investors think about the TerraPower stake within SKI's broader "energy platform" strategy? What is the n timeline and SKI's potential role across the SMR value chain? Could SMRs eventually supply SK Group fabs/data centres, and should investors expect further capital commitments?
- **New leadership/electricity strategy:** What are the new management team's priorities as SKI expands into electricity? How much investment could supplying SK Group fabs/data centres require, how will this be balanced against shareholder returns, and is the W20tn 2030 EBITDA target still appropriate?
- **City gas RCPS:** Are you leaning toward cash redemption or transferring the city gas businesses? If transferred, what would be the impact on E&S earnings, and do regulated utilities remain core to the portfolio?

Model update

We update our Aramco, TotalEnergies and Neste models following 3Q reporting. We highlight: **1) Aramco.** We raise FY26 NI and CFFO (ex-WC) 4% to $133bn and $166bn respectively. This reflects an in line 3Q, MtM 4Q Brent of $95 and higher 4Q crude production (in line with JPM Commodities). Based on an unchanged blended DCF/2027 PER valuation methodology, we also roll forward our target price to end-27 (prior mid-27), re-mark 2027/28 Brent to $85/$75 (prior $75/$65), and raise our WACC to reflect Middle East uncertainty. Net net. TP lowered 3% to SAR 29 (prior 30); **2) TotalEnergies.** FY26 NI and CFFO remain broadly unchanged at $27bn and $41bn respectively at FY Brent $95/bbl, refining margin $20. 2027+ changes are limited and TP remains unchanged; **3) Neste**. Incorporating 3Q, recent refining/renewable margins trends, we raise FY26 EBITDA ~10% to €4.7bn. Within that, we continue to assume lower q/q renewable margins and sales volumes reflecting the planned maintenance. 2027/28 Group EBITDA is increased avg. LSD% on higher refining margins assumptions, partly offset by the further delay of Rotterdam expansion. TP remains unchanged.

Investment Thesis, Valuation and Risks

TotalEnergies *(Neutral; Price Target: €85.00)*

Investment Thesis
We are Neutral on TotalEnergies for: **1) EU Oils highest direct Middle East asset exposure**. While the barrels are below average margin, ongoing Hormuz disruption poses a relative risk to cash conversion; **2) FY operational targets** are on-track, but now appear to offer **diminished upside; 3) France domicile effects** should be monitored ahead of next budgetary/election processes, including the knock-on risk of heightened debate on energy (windfall) taxes.

Valuation
Our Dec-27 PT is €85, set as an equal-weighted blend of SOTP and 2027E PER. We assume value crystallisation on our Renewables valuation (i.e. 0% discount) and incorporate the risk-adjusted Russia value upside into the NAV($3bn or €1.5/sh). We apply a 15% discount to the O&G business offset by a 5% premium on its resource longevity. On multiples, we target a 15% sector discount to an EU mkt 2027E forward median PER 14.0x; from this, we adjust for Total's historical premium/discount to the sector, which gives a target 11.5x on 2027E EPS at $85/bbl Brent.

Risks to Rating and Price Target
Macro risks – The main generic risks, both to the upside and downside, come from crude oil, natural gas or refining margins significantly differing from our assumptions.

Balance sheet – While gearing remains comfortable in an absolute sense, leverage increases during 2025 leave delivery on underlying deleveraging as a key driver to future share price performance. Slippage would likely weigh on the shares.

E&P project execution risk – delivery on core growth projects is central to delivering on TotalEnergies differentiation through sustained topline growth.

J.P.Morgan

Investment Thesis, Valuation and Risks

Neste *(Neutral; Price Target: €30.00)*

Investment Thesis
Our Neutral rating for Neste is centred on valuation grounds with a diminished 8.1x 2026/27e EV/EBITDA now only approx one turn above what we regard as baseline (fossil fuel) European refining levels and headline upside to our NAV-based TP nearer EU Oils average. Renewable fuels market fundamentals remain challenged and we **lack conviction in the case for a positively skewed re-rating** for the following reasons: **1) Regulatory risks** led by uncertainty regarding the shape and impact of a US shift from BTC to a lower value domestic producer tax credit; **2) SAF mandates.** With voluntary demand upside unconvincing to date, we are concerned margin accretion proves back-loaded; **3)** Industry headwinds and diminished balance sheet capacity (FY25e gearing 37%) could necessitate **a reset of LT growth ambitions and distributions.**

Valuation
Our Dec-27 PT is €30. NAV €30/sh includes a ~€19bn Renewables EV incorporating: 1) 15% discount to a 12.0x MSCI EU Growth based EV/EBITDA multiple to place Neste in the lower half of the index range; 2) 30% risking to Neste's next sanctioned growth increment at Rotterdam. The TP is then NAV derived and incorporates a 15% fair value discount.

Risks to Rating and Price Target
Generic risks include potential variance in renewable feedstock price trends, low carbon premia and the $/€ exchange rate. Company-specific risks include: 1) material changes in US EPA RVO or EU country-level biofuel mandates (following the recent reduction in Sweden); 2) capacity growth execution and cost control (including the next growth phase, expanding the Rotterdam refinery); 3) the pace of development and growth of new renewable markets (sustainable aviation, polymers).

J.P.Morgan

Investment Thesis, Valuation and Risks

Saudi Aramco *(Overweight; Price Target: SRIs29.00)*

Investment Thesis

The company's structural long-term production growth is underpinned by differentiated resource longevity, a leading position on the industry cost/carbon curves and growing captive crude demand through vertical integration into the eastern hemisphere (where we expect most marginal LT growth to emerge). Combined with differentiated capex flexibility which rises beyond mid-decade and low through-cycle gearing, this enables the company to commit to distributing a structurally higher percentage of cash flow. A 2026e dividend yield of 5% still screens below global IOC averages, but we view this as justified by the company's superior returns and capacity to defend its distributions under lower oil price scenarios through best-in-class pre-dividend cash breakeven, deep capex flexibility and an ongoing commitment to prioritise distributions to minority shareholders.

Valuation

Our Dec-2027 TP is SAR 29.0, derived from a 50/50 blend of 2027 sector relative PER at $85/bbl Brent and a DCF at LT $65. On P/Es, the starting point is a global oil majors median 2027e multiple around 13x. Adding 20% premia for an above-average rank on our investment framework and 10% premium superior dividend security gives a target multiple of 16.9x. Our DCF FV is around 25 SAR/sh assuming long-term oil production growth to 10.4mb/d, a 8.4% WACC and 0.25% terminal growth rate.

Risks to Rating and Price Target

The government determines and may change (at its sole discretion) Aramco's crude production and the Kingdom's MSC (maximum sustainable capacity). Production decisions may also be influenced by OPEC quotas. In addition, while the company successfully responded to the 2019 drone attacks, a future repeat cannot be ruled out. We also recognise the limited role minority shareholders are likely to have in influencing significant corporate change.

Companies Discussed in This Report (all prices in this report as of market close on 11 November 2026, unless otherwise indicated)
ADNOC Drilling(ADNOCDRILL.AD/Dh5.82/OW), Aker BP(AKERBP.OL/Nkr322.20/N), Aker Solutions(AKSOA.OL/Nkr37.68/N), Centrica(CNA.L/155p/OW), Drax(DRX.L/850p/OW), EDP(EDP.LS/€5.06/N), ENI(ENI.MI/€25.20/OW), EQT Corp(EQT/$52.69/NR), EnQuest(ENQ.L/27p/OW), Enagas(ENAG.MC/€17.88/N), Endesa(ELE.MC/€44.61/N), Equinor ASA(EQNR.OL/Nkr395.20/UW), Expand Energy(EXE/$88.63/OW), Fortum(FORTUM.HE/€23.29/N), Galp Energia(GALP.LS/€19.00/OW), Harbour Energy(HBR.L/271p/N), Iberdrola(IBE.MC/€23.20/N), Ivanhoe Electric(IE/$7.48/OW), Lithium Americas Corp(LAC/$1.65/OW), Naturgy(NTGY.MC/€29.84/OW), Neste(NESTE.HE/€27.36/N), OMV(OMVV.VI/€71.60/UW), Orsted(ORSTED.CO/Dkr143.70/N), PBF Energy(PBF/$69.73/N), Philips(PHG.AS/€27.15/N), RWE(RWEG.DE/€59.12/OW), Redeia(REDE.MC/€15.59/N), Repsol(REP.MC/€29.50/N), SK Innovation(096770.KS/W110,000/OW), SSE Plc(SSE.L/2,688p/OW), Saipem(SPMI.MI/€4.33/OW), Saudi Aramco(2222.SE/SRls26.02/OW), Shell PLC(SHEL.L/3,671p/OW), Snam(SRG.MI/€6.17/N), Subsea 7(SUBC.OL/Nkr322.00/N), Technip Energies(TE.PA/€35.12/N), Terna(TRN.MI/€9.76/N), TotalEnergies(TTEF.PA/€79.37/N), Vår Energi(VAR.OL/Nkr49.60/OW)

Disclosures

Analyst Certification: The Research Analyst(s) denoted by an "AC" on the cover of this report certifies (or, where multiple Research Analysts are primarily responsible for this report, the Research Analyst denoted by an "AC" on the cover or within the document individually certifies, with respect to each security or issuer that the Research Analyst covers in this research) that: (1) all of the views expressed in this report accurately reflect the Research Analyst's personal views about any and all of the subject securities or issuers; and (2) no part of any of the Research Analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the Research Analyst(s) in this report. For all Korea-based Research Analysts listed on the front cover, if applicable, they also certify, as per KOFIA requirements, that the Research Analyst's analysis was made in good faith and that the views reflect the Research Analyst's own opinion, without undue influence or intervention.

All authors named within this report are Research Analysts who produce independent research unless otherwise specified. In Europe, Sector Specialists (Sales and Trading) may be shown on this report as contacts but are not authors of the report or part of the Research Department.

Important Disclosures

- **Market Maker/ Liquidity Provider:** J.P. Morgan is a market maker and/or liquidity provider in the financial instruments of/related to SK Innovation or related entities.
- **Client:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients: SK Innovation or related entities.
- **Client/Investment Banking:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as investment banking clients: SK Innovation or related entities.
- **Client/Non-Investment Banking, Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-investment-banking, securities-related: SK Innovation or related entities.
- **Client/Non-Securities-Related:** J.P. Morgan currently has, or had within the past 12 months, the following entity(ies) as clients, and the services provided were non-securities-related: SK Innovation or related entities.
- **Investment Banking Compensation Received:** J.P. Morgan has received in the past 12 months compensation for investment banking services from SK Innovation or related entities.
- **Potential Investment Banking Compensation:** J.P. Morgan expects to receive, or intends to seek, compensation for investment banking services in the next three months from SK Innovation or related entities.
- **Non-Investment Banking Compensation Received:** J.P. Morgan has received compensation in the past 12 months for products or services other than investment banking from SK Innovation or related entities.
- **Debt Position:** J.P. Morgan may hold a position in the debt securities of SK Innovation or related entities, if any.

Company-Specific Disclosures: J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Important disclosures, including price charts and credit opinion history tables (if applicable), are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting https://www.jpmm.com/research/disclosures, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Break in coverage Apr 24, 2026 - May 14, 2026.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. Some stocks under coverage have a rating but no price target; in these cases, we expect the stock will outperform/perform in line/underperform the average total return of the stocks in the Research Analyst's, or the Research Analyst's team's, coverage universe of the relevant duration of the region. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst's coverage universe can be found on J.P. Morgan's Research website, https://www.jpmorganmarkets.com.

Coverage Universe: Lofting, Matthew : BP (BP.L), ENI (ENI.MI), Equinor ASA (EQNR.OL), Galp Energia (GALP.LS), Neste (NESTE.HE), OMV (OMVV.VI), Repsol (REP.MC), Saudi Aramco (2222.SE), Shell PLC (SHEL.L), TotalEnergies (TTEF.PA)**Magana, Alejandra** : Aker BP (AKERBP.OL), Aker Solutions (AKSOA.OL), EnQuest (ENQ.L), Harbour Energy (HBR.L), Saipem (SPMI.MI), Subsea 7 (SUBC.OL),

J.P. Morgan Equity Research Ratings Distribution, as of October 03, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	53%	35%	12%
IB clients**	83%	81%	72%
JPMS Equity Research Coverage*	51%	37%	12%
IB clients**	95%	93%	88%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

History of Investment Recommendations:
A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of http://www.jpmorganmarkets.com where you can also search by analyst name, sector or financial instrument.

Explanation of Credit Research Valuation Methodology, Ratings and Risk to Ratings:
J.P. Morgan uses a bond-level rating system that incorporates valuations (relative value) and our fundamental view on the security. Our fundamental credit view of an issuer is based on the company's underlying credit trends, overall and our opinion on whether the issuer will be able to service its debt obligations when they become due and payable. We analyze, among other things, the company's cash flow capacity and trends and standard credit ratios, such as gross and net leverage, interest coverage and liquidity ratios. We also analyze profitability, capitalization and asset quality, among other variables, when assessing financials. Analysts also rate the issuer, based on the rating of the benchmark or representative security. Unless we specify a different recommendation for the company's individual securities, an issuer recommendation applies to all of the bonds at the same level of the issuer's capital structure. We may also rate certain loans and preferred securities, as applicable. This report also sets out within it the material underlying assumptions used. We use the following ratings for bonds (issues), issuers, loans, and preferred securities: Overweight (over the next three months, the recommended risk position is expected to outperform the relevant index, sector, or benchmark); Neutral (over the next three months, the recommended risk position is expected to perform in line with the relevant index, sector, or benchmark); and Underweight (over the next three months, the recommended risk position is expected to underperform the relevant index, sector, or benchmark). For CDS, we use the following rating system: Long Risk (over the next three months, the credit return on the recommended position is expected to exceed the relevant index, sector or benchmark); Neutral (over the next three months, the credit return on the recommended position is expected to match the relevant index, sector or benchmark); and Short Risk (over the next three months, the credit return on the recommended position is expected to underperform the relevant index, sector or benchmark).

J.P. Morgan Credit Research Ratings Distribution, as of October 03, 2026

	Overweight (buy)	Neutral (hold)	Underweight (sell)
Global Credit Research Universe*	26%	57%	17%
IB clients**	85%	84%	87%

***Please note that the percentages may not add to 100% because of rounding.**
****Percentage of subject companies within each of the "Overweight," "Neutral" and "Underweight" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.**
For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. The Credit Research Rating Distribution is at the issuer level. Issuers with an NR or an NC designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to UK MIFID Research Unbundling exemption for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Digital assets, which may also be referred to as virtual or crypto assets or crypto currencies (e.g. bitcoin), discussed in this research report are subject to a rapidly changing regulatory landscape. The application of relevant laws in respect of such assets may be unsettled, and the legality of any digital asset investment may be unclear. Prior to making any investment decision regarding any digital asset, investors should seek their own legal advice and be aware of any legal considerations regarding the purchase, holding or selling of such an investment. For relevant regulatory advisories on digital assets, including bitcoin and ethereum, please see https://www.jpmorgan.com/disclosures/cryptoasset-disclosure.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or https://www.finra.org/sites/default/files/2020-08/Security_Futures_Risk_Disclosure_Statement_2020.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Where more than one legal entity is listed under an analyst's name, the first legal entity is responsible for the production unless

知识星球：前沿信息收录

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. Artificial intelligence tools may have been used in the preparation of this material, including assisting in data analysis, pattern recognition, and content drafting for research material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
